

This tutorial provides an overview and demonstrates five tasks.

Intro Learn about IBM Content Analytics and IBM Cognos 8 Business Intelligence.

Administration console tasks:

Task 1 Authorize users to export documents and create reports from the text miner application.

Task 2 Run a wizard to set up the ability to export documents directly to an IBM Cognos BI database.

Task 3 Run a wizard to set up the ability to create IBM Cognos BI reports.

Text miner application tasks:

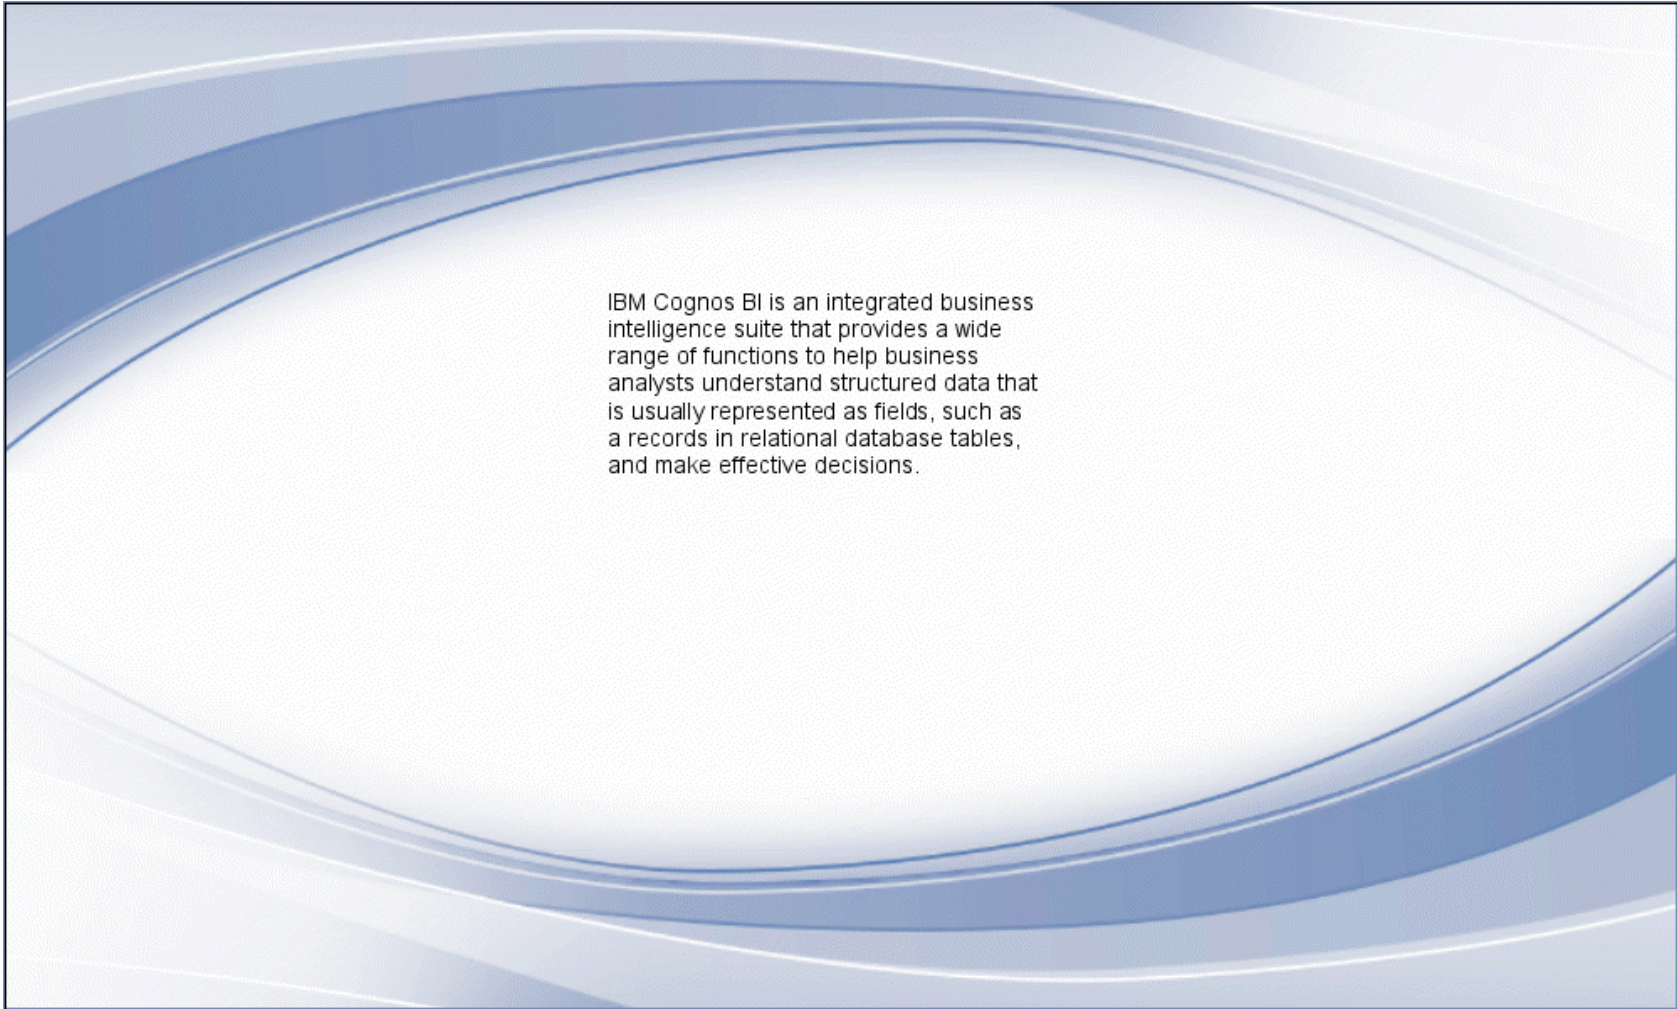

Task 4 Export documents to an IBM Cognos BI database and modify the Cognos data model.

Task 5 Create an IBM Cognos BI report and use IBM Cognos BI tools to further analyze data.

Introduction

IBM Content Analytics can connect to many different data sources, collect a large number of documents, and perform extensive analysis of textual (**unstructured**) and **structured** content.

Many IBM products can make use of this analyzed data, such as IBM Cognos 8 Business Intelligence (IBM Cognos BI).

You can pass data from IBM Content Analytics to IBM Cognos BI in two ways:

Export documents

You can export documents with text analysis results directly into star-schema tables in a relational database, which enables you to do more in-depth analysis of the structured and unstructured data.

For example, you might want to run online analytical processing (OLAP) queries against the data to gain deeper insight.

Generate reports

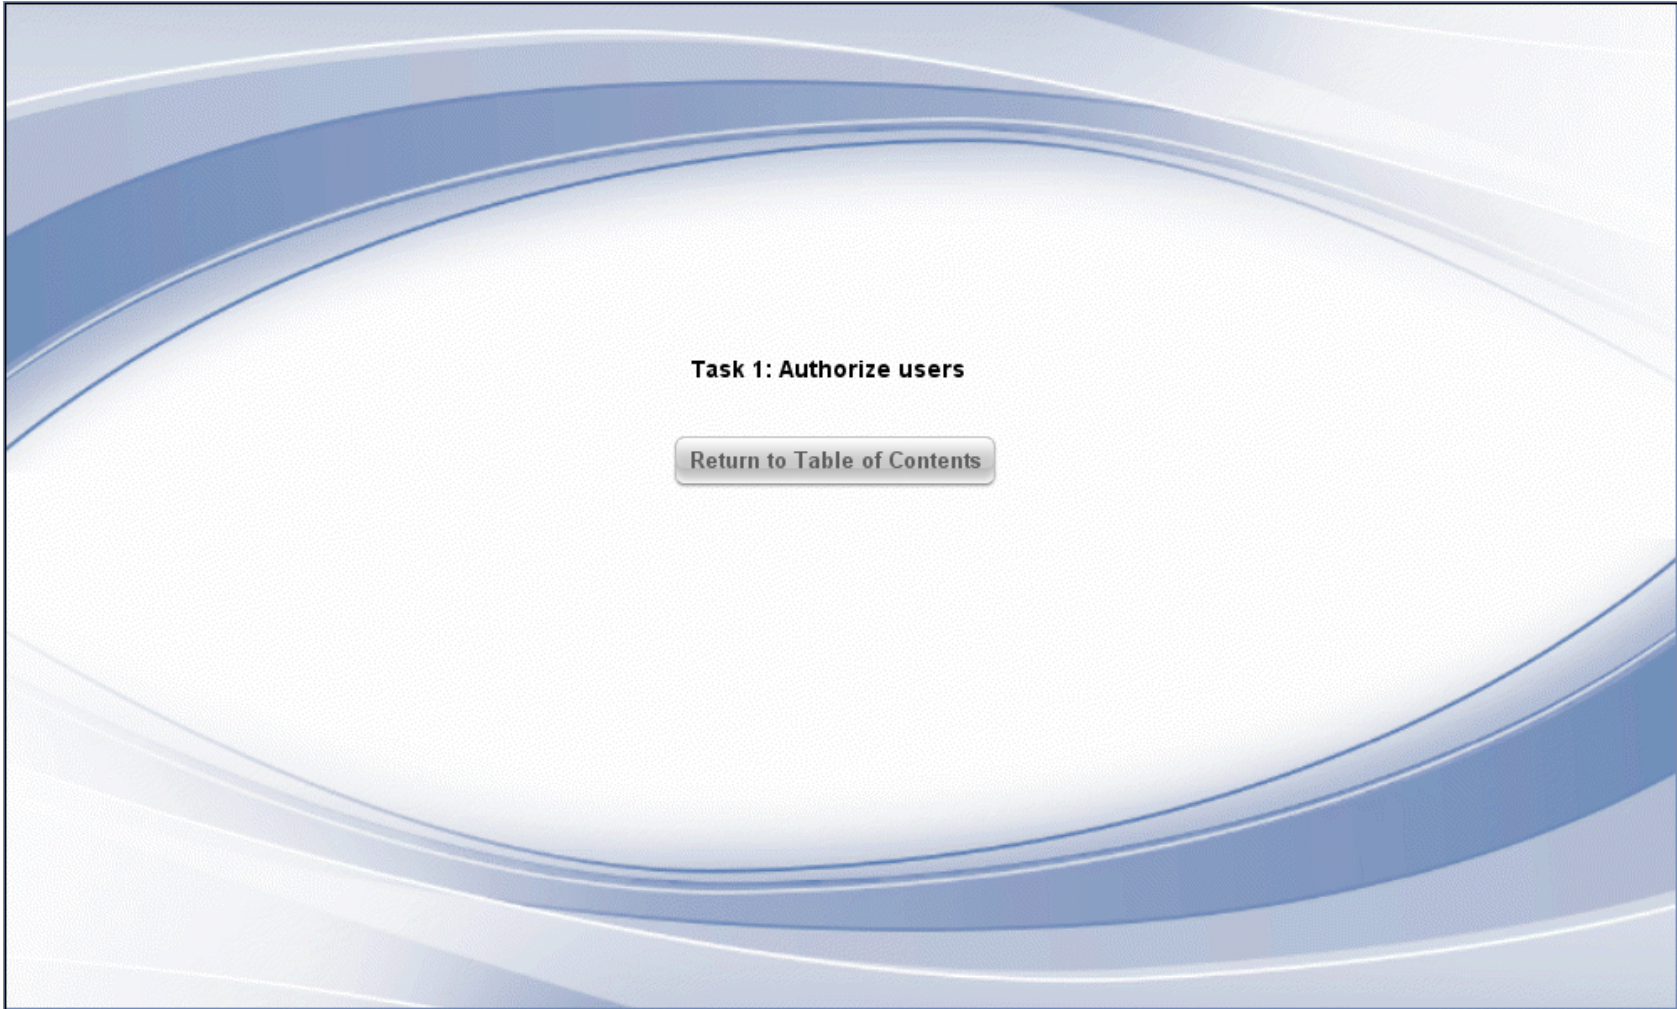

You can use the text miner application to explore content, create analytical reports, open the reports with IBM Cognos BI, share reports with other users, and use Cognos Report Studio to modify the reports.

Setup Requirements:

Before running wizards in the administration console, you must set up the integration, such as creating a database to store text mining data and copying JAR files to the Content Analytics master server.

Follow these procedures under **Integration** in the information center:

- >> Configuring IBM Content Analytics to export documents to IBM Cognos BI
- >> Configuring IBM Content Analytics to generate IBM Cognos BI reports

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot shows the IBM Content Analytics administration console. The top navigation bar includes the following tabs: Collections, System, Security (highlighted with a red box), Search Customizer, Analytics Customizer, Log Out, Help, and About. Below the navigation bar, the 'Collections' section is visible, featuring a 'Create Collection' button, a 'Refresh' button, and a search input field. A callout box with a light blue background and a speech bubble icon is overlaid on the page, containing the text: 'To authorize users to export documents and create reports from the text miner application, open the administration console and then click the Security tab.' Below the callout, there are two tables. The first table, titled 'Text Analytics Collections', has columns for 'Collection name', 'Crawl', 'Parse and Index', 'Search', and 'Monitor Edit'. The second table, titled 'Text Analytics Collections', has columns for 'Collection name', 'Crawl', 'Parse and Index', 'Search', and 'Monitor Edit'. The data rows in the second table are as follows:

Collection name	Crawl	Parse and Index	Search	Monitor Edit
ICA_Cognos				
LC3 NonSecured				
LC3 Secured				

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot shows the IBM Content Analytics interface. At the top, there is a blue header with the IBM logo and the text "IBM Content Analytics". Below the header is a navigation bar with several menu items: Collections, System, Security, Search Customizer, Analytics Customizer, Log Out, Help, and About. The main content area is titled "Security : Administrative Roles". Below this title is a link "Help for this page". There are four tabs: Administrative Roles, Application User Roles, System Security, and Connection Information. The "System Security" tab is highlighted with a red border. Below the tabs is a table with a header row containing "User" and "Role". Two yellow callout boxes are present. The first callout box points to the "Application User Roles" tab and contains the text: "If users are required to log in to the text miner application, click **Application User Roles** to configure privileges for specific user IDs and group IDs." The second callout box points to the "System Security" tab and contains the text: "In this scenario, click **System Security** to configure privileges for all users."

The screenshot shows the IBM Content Analytics web interface. At the top, there is a blue header with the IBM logo and the text "IBM Content Analytics". Below the header is a navigation bar with several menu items: "Collections", "System", "Security", "Search Customizer", "Analytics Customizer", "Log Out", "Help", and "About". The main content area is titled "Security : System Security". Below this title is a link "Help for this page" and a set of tabs: "Administrative Roles", "Application User Roles", "System Security" (which is the active tab), and "Connection Information". Under the "System Security" tab, there are four links, each with a pencil icon: "Configure identity management", "Configure application IDs", "Configure embedded application server login settings", and "Configure application user roles". A yellow callout box with a speech bubble tail pointing to the "Configure application user roles" link contains the text: "Click **Configure application user roles**."

The screenshot shows the 'Configure application user roles' dialog box in IBM Content Analytics. The title bar reads 'IBM Content Analytics'. The navigation menu includes 'Collections', 'System', 'Security', 'Search Customizer', 'Analytics Customizer', 'Log Out', 'Help', and 'About'. The breadcrumb path is 'Security : System Security > Configure application user roles'. The main heading is 'Configure application user roles' with a link for 'Help for this page'. The instruction says: 'Select the check boxes for the functions that application users can do.' Under 'User privileges:', there is a list of options with checkboxes. Two checkboxes are checked and highlighted with red boxes: 'Export documents' and 'Create IBM Cognos BI reports'. A yellow callout box contains the text: 'Select the check boxes for exporting documents and creating IBM Cognos BI reports, and click **OK**.' At the bottom left are 'OK' and 'Cancel' buttons.

Database Information for Exported Documents

[Help for this page](#)

Documents will be exported into star-schema tables. Specify the following database connection information. The database must exist and the user must have privileges to create a table and drop a table. After you click Next, IBM will create tables under the specified schema.

Tip: For Oracle, the schema name is required. For other database types, the user name is required.

* JDBC database type:
DB2

* JDBC driver name:
com.ibm.db2.jcc.DB2Driver

* JDBC driver class path:
C:\db2\db2jcc.jar;C:\db2\db2jcc_license_cu.jar

* Database URL:
Examples:
- DB2 UDB: jdbc:db2://localhost:50000/sample
- Oracle: jdbc:oracle:thin:@localhost:1521:sample
- SQL Server 2008: jdbc:sqlserver://localhost:1433;DatabaseName=sample
jdbc:db2://example.server.com:50000/cognosbi

After you select the database type, the system attempts to provide default values for other fields.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

Specify the following database connection information.
The database must exist and the user must have privileges to create a table and drop a table.
After you click Next, IBM Content Analytics tries to create tables under the specified schema.

Tip: For Oracle, the schema name is usually the same as the user name.

* JDBC database type:
DB2

* JDBC driver name:
com.ibm.db2.jcc.DB2Driver

* JDBC driver class path:
C:\db2\db2jcc.jar;C:\db2\db2jcc_license_cu.jar

* Database URL:
Examples:

[Collections](#) > [ICA Cognos : Export](#) > **Information about a package**

Specify information to publish a package

[Help for this page](#) ^[7]

Select the Data Source Connection that is configured on the IBM Cognos BI server that points to the database that you specified for exporting documents.

Also specify an existing directory. The IBM Cognos BI Action Log file will be saved at the specified directory. This Action Log can be loaded by Cognos Framework Manager or Cognos BMT Script Player to create an IBM Cognos BI modeling project. With this project, you can modify the model on your own.

After you click Finish, IBM Content Analytics publishes the package.

* Data source connection:

* Package Name:

Directory to save the IBM Cognos BI action log:
If specified, the action log script will be saved to create an IBM Cogn

When you click Finish, IBM Content Analytics creates and publishes a data model on the IBM Cognos BI server.

If you save the action log, you can update the data model by using IBM Cognos BI tools.

For example, you might want to add a structured database field to the published model to explore unstructured content from a different analytical perspective.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot shows the IBM Content Analytics web interface. At the top, there is a navigation bar with the IBM logo and the text "IBM Content Analytics". * Password:

Always use this authentication data to generate reports

The user ID must be an ID that has administrator privileges for the IBM Cognos BI server.

If you leave this check box blank, users can specify an IBM Cognos BI user ID and password by editing **Preferences** in the text miner application.

IBM IBM Content Analytics

[Collections](#) [System](#) [Security](#) [Search Customizer](#) [Analytics Customizer](#) [Log Out](#) [Help](#) [About](#)

[Collections](#) > [ICA Cognos : Text Analytics](#) > **Information about package**

Specify information to publish a package

[Help for this page](#) ^[7]

IBM Content Analytics publishes the package to the IBM Cognos BI server. This package includes a model for the IBM Cognos BI server to retrieve data from the database for report generation. Select the Data Source Connection that points to the database that you specified for storing the results of text mining. You can configure the Data Source Connection by using IBM Cognos Connections.

After you click Finish, IBM Content Analytics publishes the package.
Note: The default user role does not have privileges to create IBM Cognos BI reports. To assign privileges, go to System > Security > Configure application user roles and enable the ability to create IBM Cognos BI reports.

* Data source connection:

* Package Name:

When you click **Finish**, IBM Content Analytics creates and publishes a data model on the IBM Cognos BI server that can be used to store text mining results and generate reports.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. At the top, the IBM logo and 'IBM Content Analytics' are visible. A navigation bar includes links for Collections, System, Security, Search Customizer, Analytics Customizer, Log Out, Help, and About. The current page is titled 'Collections > ICA_Cognos : Text Analytics'. A message box indicates that settings were successfully applied. Below this, there is a 'Help for this page' link and a dropdown menu for 'Collection name' set to 'ICA_Cognos'. A series of tabs are shown: Crawl, Import, Parse and Index, Search, Text Analytics (selected), Export, Log, and General. Under the 'Text Analytics' tab, a list of configuration options is provided, with 'Configure IBM Cognos BI report generation options' highlighted by a red box. A purple callout box on the right contains the following text: 'The next time you run the report wizard, your settings are displayed as default values. You can update the database and IBM Cognos BI server settings without running the wizard again.'

- Source: 00000004, Title: [milk chocolate - Ads 2008-01-03 1199359192093 Ads TV ads milk chocolate I love the ads](#)

On the left side, there is a "Facet Navigation" panel with a "Filter:" input field and a "Clear" button. Below this are several facet categories: "Part of Speech", "Phrase", "Named entity", "My Keywords", "Category", "Subcategory", and "Product". At the bottom of the facet panel, there is a "Search type:" dropdown menu set to "Facet search", a "Facet Path:" input field, a "Keyword:" input field, and a "New search" button.

A purple text box overlay is positioned over the search results, containing the following text:

In this scenario, you use the text miner application to explore a collection that contains customer complaints.

You notice an increase in complaints about product prices and decide to explore which product or products might have caused the increase in complaints.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. At the top, the header includes the IBM logo, the text "IBM Content Analytics", and navigation links for "Collection: Sa... Create a Report

To gain deeper insight into analyzed content, create a report that you can view with IBM Cognos Business Intelligence. You can also create a report in CSV format to import into spreadsheets and other applications.

Select an output format:

IBM Cognos BI report CSV file

Name: report_1262844532

Number of keywords (facet rows): [dropdown]

Maximum number of keywords (facet columns): 100

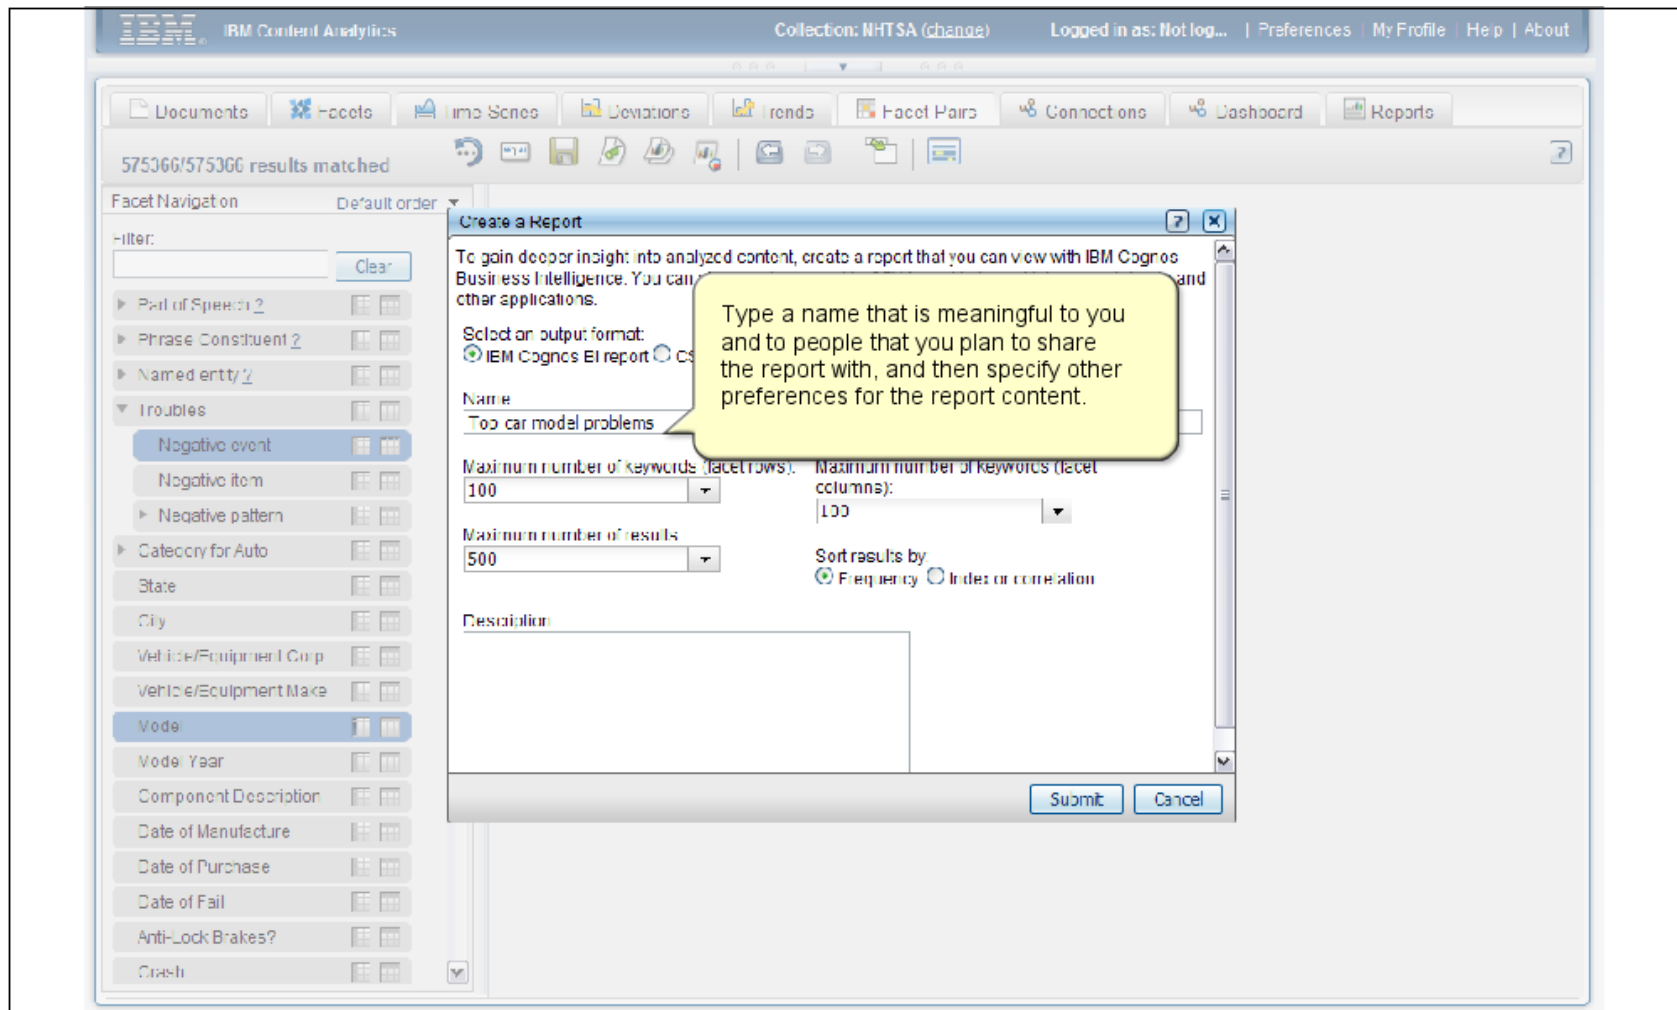

Sort results by: Frequency Index or correlation

Description: [text area]

Submit Cancel

In this scenario, you want to create a report that can be further analyzed with IBM Cognos BI tools.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. At the top, the page title is "IBM Content Analytics" and the collection is "NHTSA (change)". The user is logged in as "Not log...". The main navigation bar includes "Documents", "Facets", "Time Series", "Deviations", "Trends", "Facet Pairs", "Connections", "Dashboard", and "Reports". The search results show "575366/575366 results matched".

The "Facet Navigator" on the left lists various facets such as "Part of Speech 2", "Phrase Constituent 2", "Named entity 2", "Troubles", "Negative event", "Negative item", "Negative pattern", "Category for Auto", "State", "City", "Vehicle/Equipment Comp", "Vehicle/Equipment Make", "Model", "Model Year", "Component Description", "Date of Manufacture", "Date of Purchase", "Date of Fail", "Anti-Lock Brakes?", and "Crash".

The "Create a Report" dialog box is open, providing instructions: "To gain deeper insight into analyzed content, create a report that you can view with IBM Cognos Business Intelligence. You can also view the report in other applications." The user has selected "IBM Cognos BI report" as the output format. The report name is "Top car model problems". The "Maximum number of keywords (facet rows)" is set to 100, and the "Maximum number of keywords (facet columns)" is set to 100. The "Maximum number of results" is set to 500. The "Sort results by" options are "Frequency" (selected) and "Index or correlation". A "Description" field is also present. A yellow callout box points to the "Name" field with the text: "Type a name that is meaningful to you and to people that you plan to share the report with, and then specify other preferences for the report content." The dialog has "Submit" and "Cancel" buttons at the bottom.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot shows the IBM Content Analytics interface with a 'Create a Report' dialog box open. The dialog box contains the following fields and options:

- Name:** Top car model problems
- Maximum number of keywords (facet rows):** 100
- Maximum number of results:** 500 (circled in red)
- Sort results by:** (dropdown menu)
- Description:** (text area)
- Buttons:** Submit (circled in red) and Cancel

Annotations include a yellow callout box with the text: "Use the usage tips as needed to specify your report preferences, and click **Submit** to submit the request." and a tooltip for the 'Maximum number of results' field stating: "Specify the maximum number of top results to include in the report. The top results vary according to whether results are sorted by frequency or by the index or correlation value."

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. The top navigation bar includes the IBM logo, the text 'IBM Content Analytics', and user information: 'Collection: NHTSA (change)', 'Logged in as: Not log...', 'Preferences', 'My Profile', 'Help', and 'About'. Below the navigation bar is a toolbar with icons for Documents, Facets, Time Series, Deviations, Trends, Facet Pairs, Connections, Dashboard, and Reports. The main content area shows '575366/575366 results matched' and a 'Facet Navigator' on the left. The 'Facet Navigator' has a search filter and a list of facets including 'Part of Speech 2', 'Phrase Constituent 2', 'Named entity 2', 'Troubles', 'Negative event', 'Negative item', 'Negative pattern', 'Category for Auto', 'State', 'City', 'Vehicle/Equipment Comp', 'Vehicle/Equipment Make', 'Model', 'Model Year', 'Component Description', 'Date of Manufacture', 'Date of Purchase', 'Date of Fail', 'Anti-Lock Brakes?', and 'Crash'. The 'Model' facet is currently selected. A 'Create a Report' dialog box is open in the center, containing the following text: 'Your request was submitted to the IBM Cognos BI server. Go to the Reports view to open the report in IBM Cognos BI or to copy the URL so that you can share the report with others. If the IBM Cognos BI server requires authentication, first open Preferences to specify the user ID and password.' Below this text is a checkbox labeled 'Do not show this message' and a 'Close' button. A blue callout box with a speech bubble icon is overlaid on the dialog, containing the text: 'After you submit the report request, a confirmation message lets you know that the report is being processed and that you can see it by opening the Reports view.'

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. At the top, the header shows 'Collection: NHTSA (change)' and 'Logged in as: Not log...'. Below the header is a navigation bar with tabs for Documents, Facets, Time Series, Deviations, Trends, Facet Pairs, Connections, Dashboard, and Reports. The main content area shows '575366/575366 results matched' and a 'Facet Navigator' on the left with various filters like 'Part of Speech 2', 'Phrase Constituent 2', and 'Named entity 2'. A 'Create a Report' dialog box is open in the center, containing the following text:

Create a Report

Your request was submitted to the IBM Cognos BI server. Go to the Reports view to open the report in IBM Cognos BI or to copy the URL so that you can share the report with others.

If the IBM Cognos BI server requires authentication, first open Preferences to specify the user ID and password.

Do not show this message again.

Close

Two yellow callout boxes provide additional instructions:

- One callout points to the 'Do not show this message again' checkbox and states: "You can choose to skip this message when you submit future reports."
- Another callout points to the 'Close' button and states: "Click **Close** to shut the message box."

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot shows the IBM Content Analytics interface. At the top, the title bar reads 'IBM Content Analytics' and 'Collection: NHTSA (chang...'. Below the title bar, there are navigation tabs: Documents, Facets, Time Series, Deviations, Trends, and Facet Pairing. A search bar shows '575366/575366 results matched'. On the left, a 'Facet Navigation' panel lists various filters, with 'Model' selected. The main area displays a table with columns: Rows: Model, Columns: Negative event, Frequency, and Correlation. A callout box points to a 'Reports' button in the top right corner.

To see the report, open the **Reports** view.

Rows: Model	Columns: Negative event	Frequency	Correlation
SONATA	cradle	48	17.3

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics web interface. At the top, the header shows "IBM Content Analytics" and "Collection: NHTSA (change)". The user is logged in as "Not log...". The navigation bar includes tabs for Documents, Facets, Time Series, Deviations, Trends, Facet Pairs, Connections, Dashboard, and Reports. Below the navigation bar, a status bar indicates "575366/575366 results matched".

The main content area is divided into two sections. On the left, a "Reports" panel lists several reports with icons indicating their text mining views:

- Top car model problems
- congncs_report_1282734377
- congncs_report_1282230479
- congncs_report_1202230755
- congncs_report_1202230694
- congncs_report_1282233751

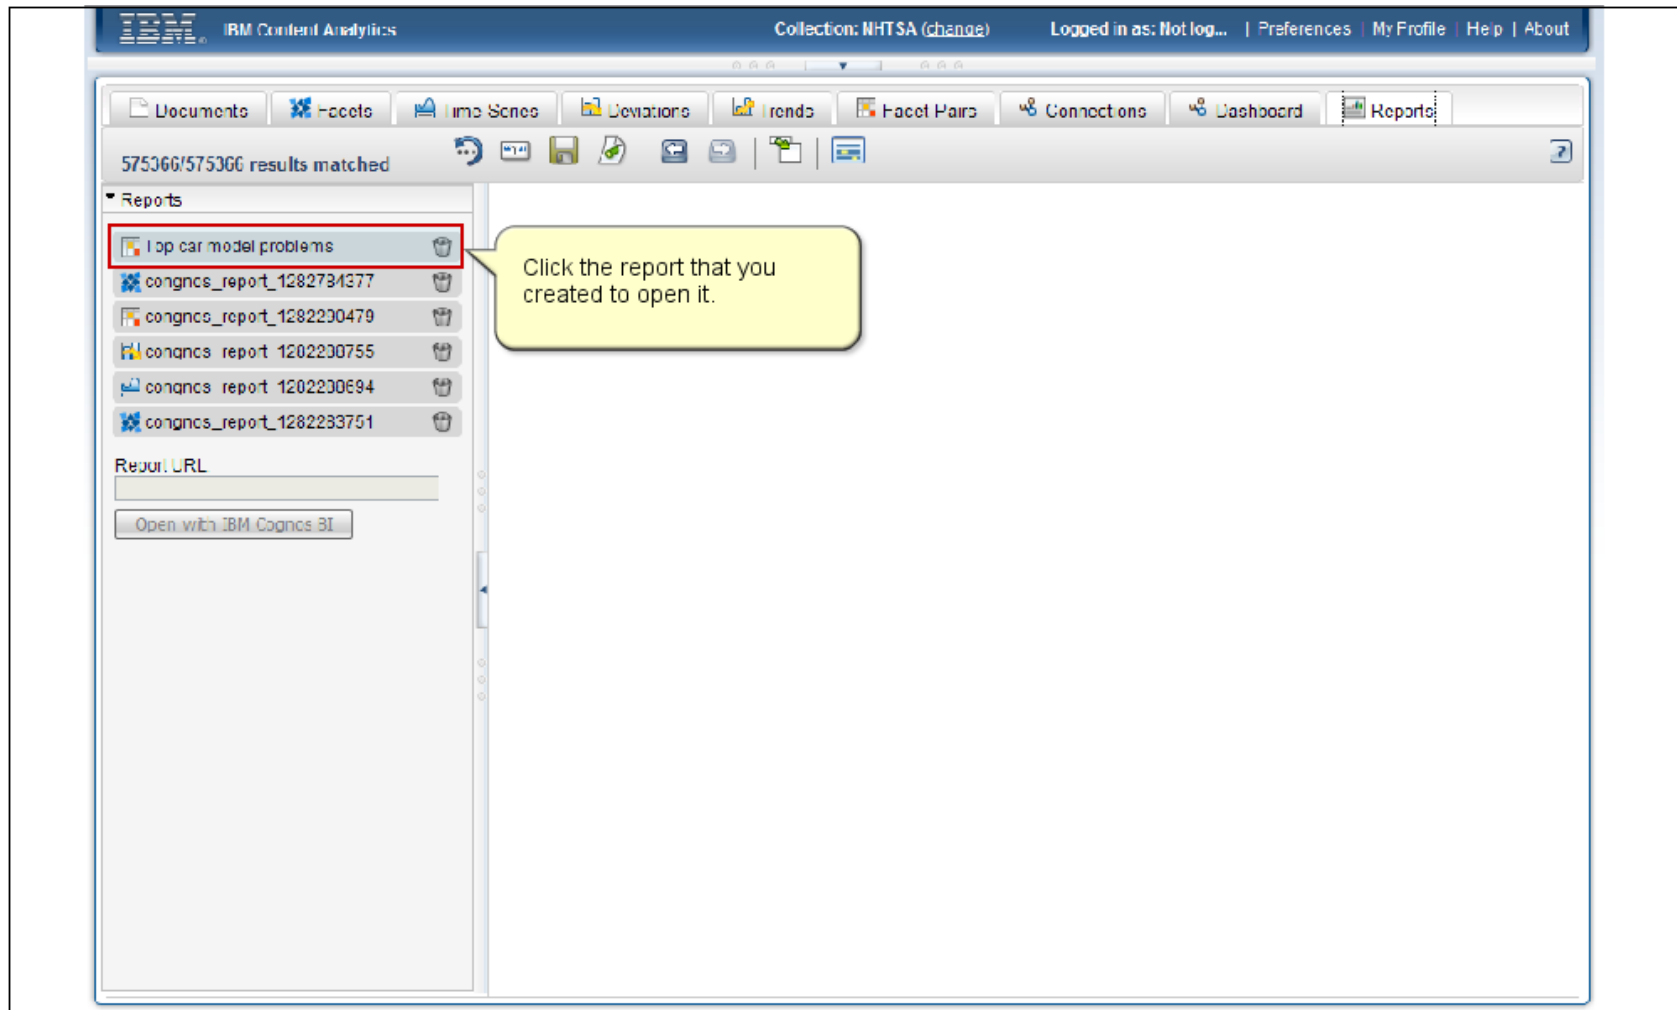

Below the list, there is a "Report URL" field and an "Open with IBM Cognos BI" button.

A callout box on the right contains the following text:

Your report is listed with other reports that were created by you or other users. Icons identify which text mining view the report was generated from.

Depending on your IBM Cognos BI privileges, you can edit the report with the Report Studio application, or explore, analyze, and compare dimensional data with IBM Cognos BI.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

The screenshot displays the IBM Content Analytics interface. At the top, the browser address bar shows "Collection: NHTSA (change)" and "Logged in as: Not log...". The main navigation bar includes "Documents", "Facets", "Time Series", "Deviations", "Trends", "Facet Pairs", "Connections", "Dashboard", and "Reports". Below this, a status bar indicates "575366/575366 results matched".

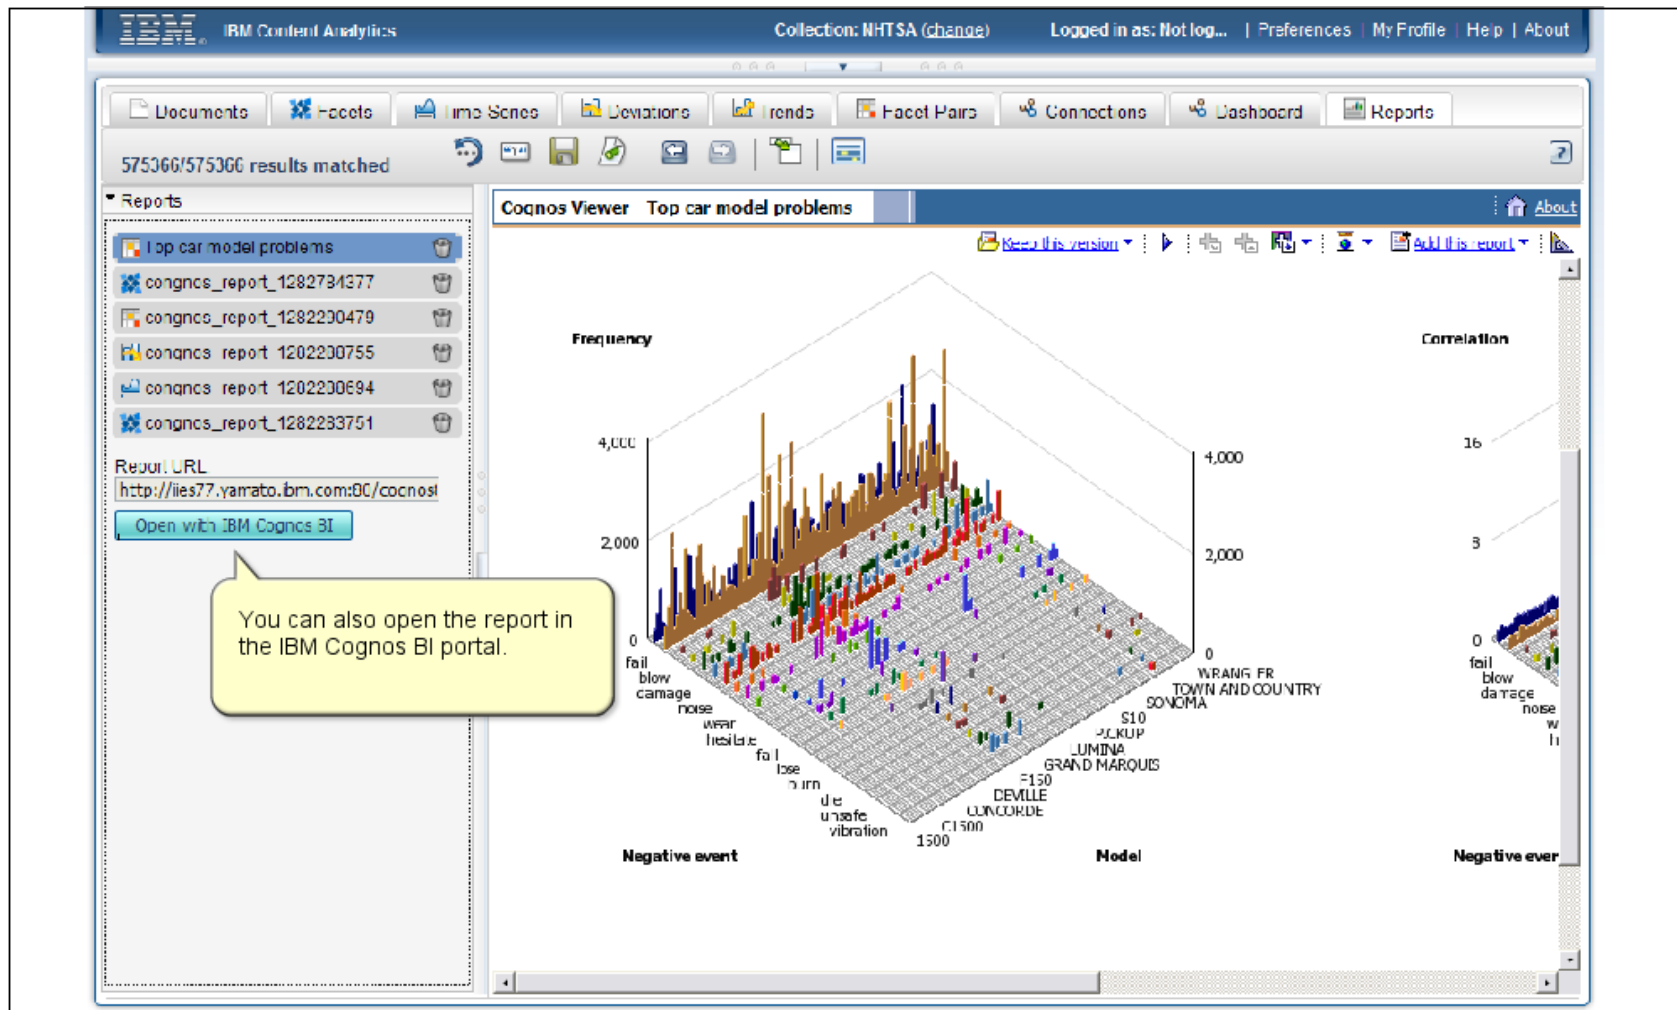

The left sidebar contains a "Reports" section with a list of reports. The first report, "Top car model problems", is selected. Below it, several "congnce_report_12..." entries are listed. A "Report URL" field is highlighted with a red box, containing the URL "http://ies77.yarrato...". A yellow callout box points to this URL with the text: "If you expand list of reports, you can easily share the report with non-IBM Cognos BI users by copying the URL and pasting it into a document or email."

The main content area is titled "Cognos Viewer Top car model problems". It features a 3D bar chart with the following axes:

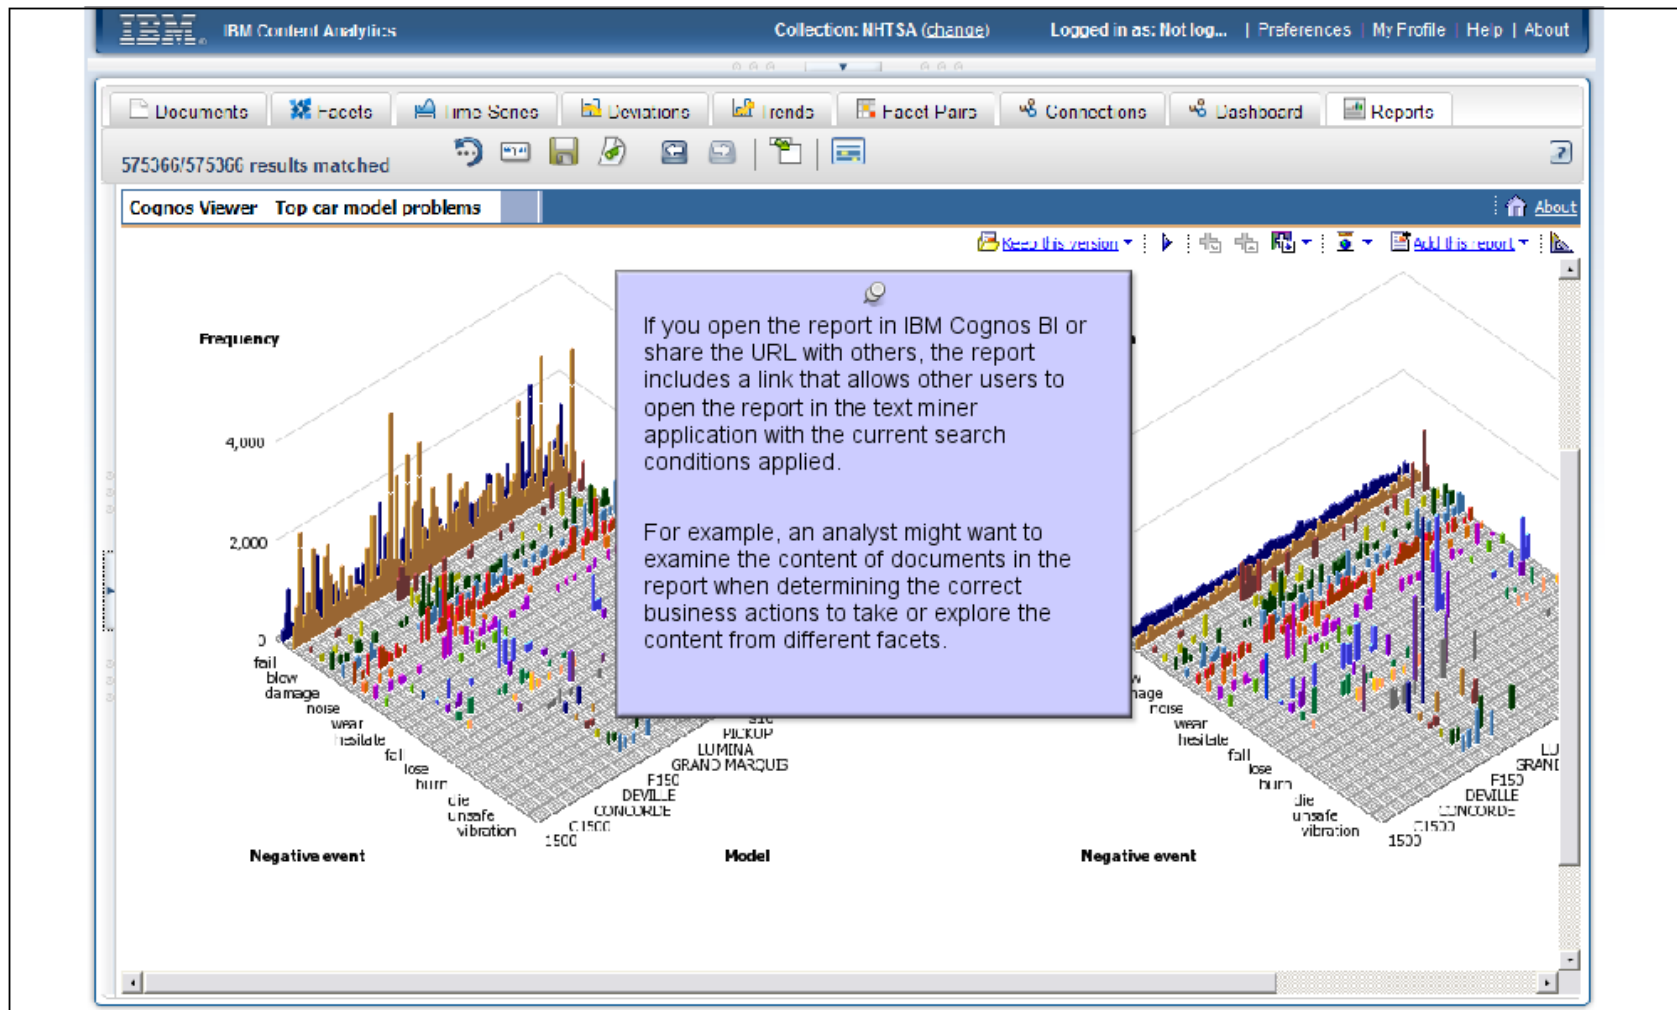

- Vertical Axis (Z-axis):** Labeled "Correlation", with values 0, 2,000, and 4,000.
- Horizontal Axis (X-axis):** Labeled "Negative event", with categories: fail, blow, damage, noise, wear, tear, failure, loss, vibration, and unsafe.
- Depth Axis (Y-axis):** Labeled "Model", with categories: GRAND MARQUIS, DEVILLE, LINCOLN, and C1500.

On the right side of the chart, there is a secondary vertical axis labeled "Correlation" with values 0, 5, and 16. A small 3D bar chart is also visible on the right side of the interface.

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

Integrating IBM Content Analytics with IBM Cognos Business Intelligence

This completes the tutorial about how to use IBM Content Analytics to export documents to a relational database and how to create reports that can be further analyzed with IBM Cognos 8 Business Intelligence.
