

Installation for the Communications Server for AIX®.

Installation overview

- **CS/AIX V6.4.0 is shipped with three CDs**
 - ▶ **QuickStart CD**
 - Provides URLs on where to get information for CS/AIX
 - Contains the CS/AIX documentation
 - ▶ **Server CD**
 - Contains the server installation files used by the AIX “installp” program and documentation for the product
 - Contains the CS/AIX documentation
 - ▶ **Remote API client CD**
 - Client installation package for Windows®, Win-64, AIX, and Linux® (i686, x86_64, ppc64 and s390x) platforms

Communications Server for AIX has three CDs that make up the media package

QuickStart for information and documentation

Server CD containing the installation packages for the AIX server

Remote API Client CD containing installation packages for the client platforms.

Installation

Refer to the CS/AIX README file for specific installation guidance

CS/AIX V6.4.0 requires:

- ▶ RS/6000® or pSeries® system supported by one of the AIX releases supported
- ▶ Minimum AIX release level:
 - AIX V5.3-TL5
 - AIX V6.1

Refer to the product README

You can use SMIT to install packages. SMIT will make calls to the 'installp' AIX application based off selections made in the SMIT panels.

The encryption and authentication support will use the gskta.rte package found with the code.

Installation, continued

The AIX SMIT interface can be used to install from the media:

- ▶ `smit install_bundle`
- ▶ `smit install_latest`
- ▶ `smit install_selectable_all`

To install the support for SSL connectivity for TN3270 Server, Telnet Redirector or Remote API client/server, select the `gskrta.rte` and `sna.gsk_jre` package

Refer to the product README

You can use SMIT to install packages. SMIT will make calls to the 'installp' AIX application based off selections made in the SMIT panels.

The encryption and authentication support will use the `gskta.rte` package found with the code.

Feedback

Your feedback is valuable

You can help improve the quality of IBM Education Assistant content to better meet your needs by providing feedback.

- Did you find this module useful?
- Did it help you solve a problem or answer a question?
- Do you have suggestions for improvements?

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.
