IBM

IBM Security Network Intrusion Prevention System V4.1

Configuring the appliance

This is a self-running demonstration that shows you how to complete a task.
Controls are available at the bottom of the screen.

© Copyright IBM Corporation 2011 All rights reserved.

Slide 2

Objectives

When you complete this module, you will be able to:

- Identify prerequisite information necessary to configure an appliance
- Perform the initial configuration of the appliance

Prerequisite appliance configuration data

There is some information you need before configuring the settings on a new appliance. This includes:

- Network configuration information for the appliance such as the:
 - IP address
 - Subnet mask
 - Default gateway
- Host configuration such as the appliance host name and domain name
- DNS configuration (if applicable)
- Protection mode for each network segment

Note: You can use the LCD panel to configure the appliance IP address, subnet mask, and gateway

Slide 4

Proventia Setup utility

- The Proventia Setup utility is a text-only configuration program that starts after you log on to the appliance for the first time
- You use the Proventia Setup utility to perform these tasks:
 - Log on and change default passwords
 - Configure the network interface and host
 - Configure the date and time
 - Configure the agent name
 - Configure the segment settings

IBM Proventia GU1000 Setup

Welcome to the
IBM Proventia(™) appliance
initial configuration utility.

Please press <Enter> key to start
configuring your appliance.

OK

To start configuring the appliance, verify that **OK** is selected and press **Enter**.

The first task when accessing an unconfigured appliance for initial configuration is typing the default username and password, admin / admin, at the login and password prompts. This task has been performed for you. This setup screen opens after a successful login.

FIPS-140 Level 2 Configuration

If you would like to enable FIPS-140 Level 2 mode, please select Enable. Otherwise please select Don't Enable.

WARNING: If you select to enable FIPS-140 mode, appliance will be rebooted to perform the FIPS integrity checks. Do not choose to enable FIPS mode without reading the relevant section in the FIPS Implementation Guide. If you choose to enable FIPS mode now, you cannot disable it later without reinstalling the appliance.

To skip FIPS configuration, press **Enter**.

The Federal Information Processing Standard (FIPS) 140 Level 2 is a cryptographic security standard used by the United States government. There is no need to enable FIPS mode if you do not need to be FIPS-compliant or if your firmware is not FIPS certified.

Configuring the appliance

Slide 36

During installation, you can register the appliance with SiteProtector so that you can manage the appliance with the SiteProtector Console. In this demonstration, SiteProtector Management is not enabled.

```
Configure SiteProtector Management

Would you like to enable SiteProtector Management?

Don't Enable  Enable  Back
```

Verify that **Don't Enable** is selected and press **Enter**.

Configuring the appliance

Slide 37

The screenshot shows a terminal window titled "IBM Proventia GUI1000 Setup" at "15 of 16". The main window is titled "Configure mDNS Service Discovery" and contains the following text:

Select 'Disable' to disable mDNS service discovery.

mDNS allows an appliance to broadcast services on the local network. This appliance broadcasts the local management web interface and SSH.

If you choose to disable mDNS, the appliance firewall rejects multicast packets to destination address 224.0.0.251.

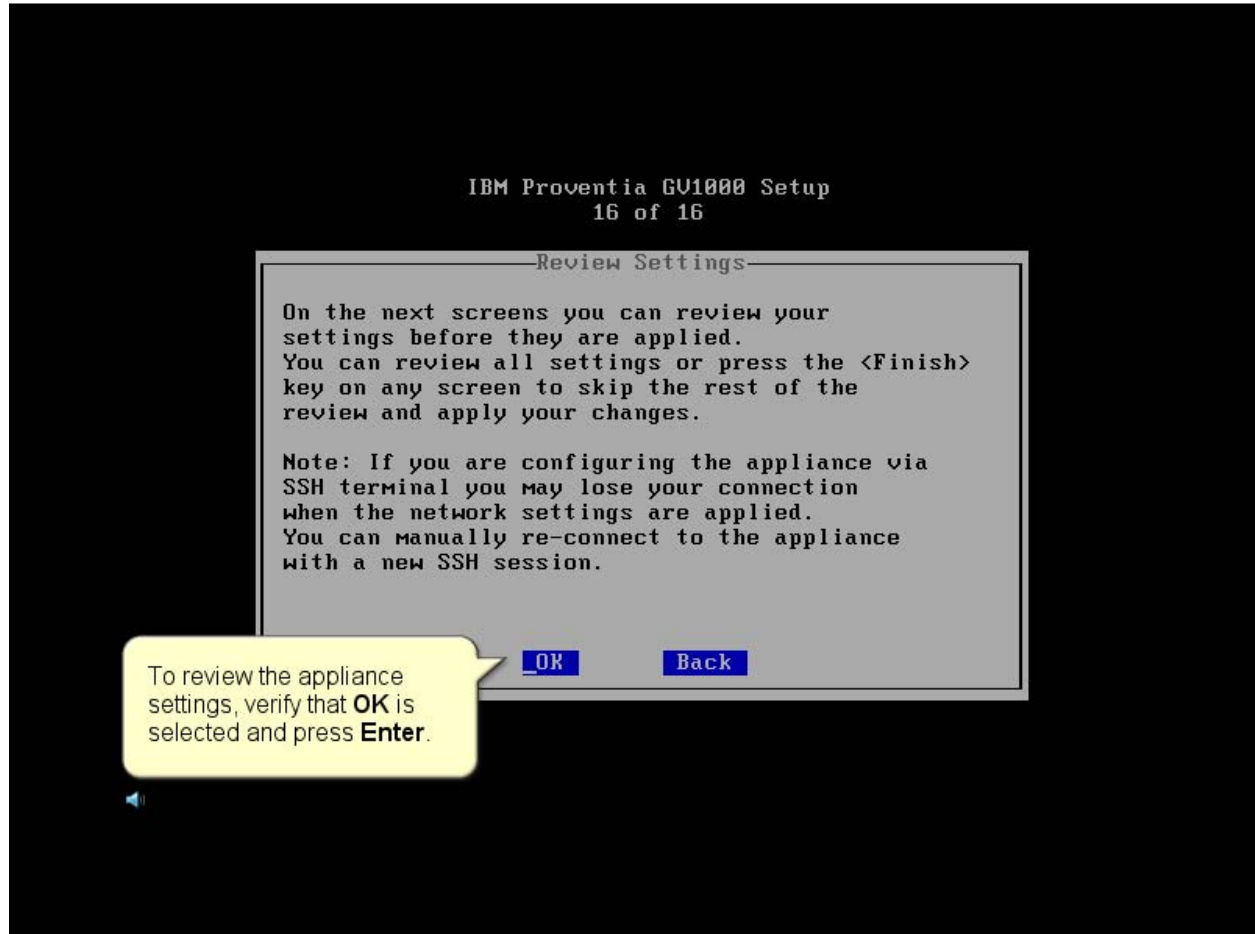

At the bottom, there are three buttons: **_Disable**, **Don't Disable**, and **Back**. The **_Disable** button has a cursor over it.

Two yellow callout boxes provide additional information:

- The top callout box says: "Note the effects of mDNS on the appliance."
- The bottom callout box says: "In this demonstration, mDNS is disabled. Verify that **Next** is selected and press **Enter**."
