IBM WebSphere Application Server V8.5

Installation with the Liberty feature and IBM WebSphere SDK Java Technology Edition 7.0.1.

This presentation describes installation characteristics of the Liberty feature included in IBM WebSphere Application Server V8.5 and IBM WebSphere SDK Java Technology Edition 7.0.1.

Distributed platform installation with Liberty feature

- The installation has not changed from the V8.0 release except for the introduction of a new optional feature "WebSphere Application Server Liberty Profile"
- The WebSphere Application Server features are grouped under the feature group "WebSphere Application Server Full Profile"
- The WebSphere Application Server Full Profile or WebSphere Application Server Liberty Profile or both must be installed
- The WebSphere Application Server Full Profile and WebSphere Application Server Liberty Profile feature cannot be modified once they are installed.
- Use feature ID "liberty" to install the new optional feature "WebSphere Application Server Liberty Profile" in silent mode

2

The installation of the WebSphere Application Server V8.5 has not changed from the previous release except for the introduction of a new optional feature 'WebSphere Application Server Liberty Profile' .

IBM WebSphere Application Server Liberty Profile is a lightweight profile of the application server, along with a simplified configuration approach for the development environment. Its fast restart times, small size and ease of use make it a great option for building web applications that do not require the full JEE environment of traditional enterprise application server profiles. The Liberty profile also can be used in production, and because it is a dynamic configuration, the application server provisions only the features required by the running applications.

The original features of the WebSphere Application Server are grouped under the feature group 'WebSphere Application Server Full Profile'.

During the installation, one of the WebSphere Application Server features must be installed. Once the WebSphere Application Server feature is installed, it cannot be modified. For example, when WebSphere Application Server Full Profile and WebSphere Application Server Liberty Profile feature are installed, they cannot be added or removed until the WebSphere Application Server is uninstalled.

Distributed platform installation of IBM WebSphere SDK Java Technology Edition 7.0.1

- IBM WebSphere SDK Java Technology Edition 7.0.1 is an optional install that can be added into a WebSphere Application Server V8.5 installation
- There are no optional features available
- The architecture (either 32-bit or 64-bit) of IBM WebSphere SDK Java Technology Edition 7.0.1 to be installed will match the architecture of IBM WebSphere SDK Java Technology Edition 6 installed during the installation of WebSphere Application Server V8.5 release
- The architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 cannot be modified

IBM WebSphere SDK Java Technology Edition 7.0.1 is an optional install that can be added into a WebSphere Application Server V8.5 installation. Note that, like WebSphere Application Server V8, Java 6 is always installed with WebSphere Application Server V8.5 and cannot be removed, even if Java 7 is added.
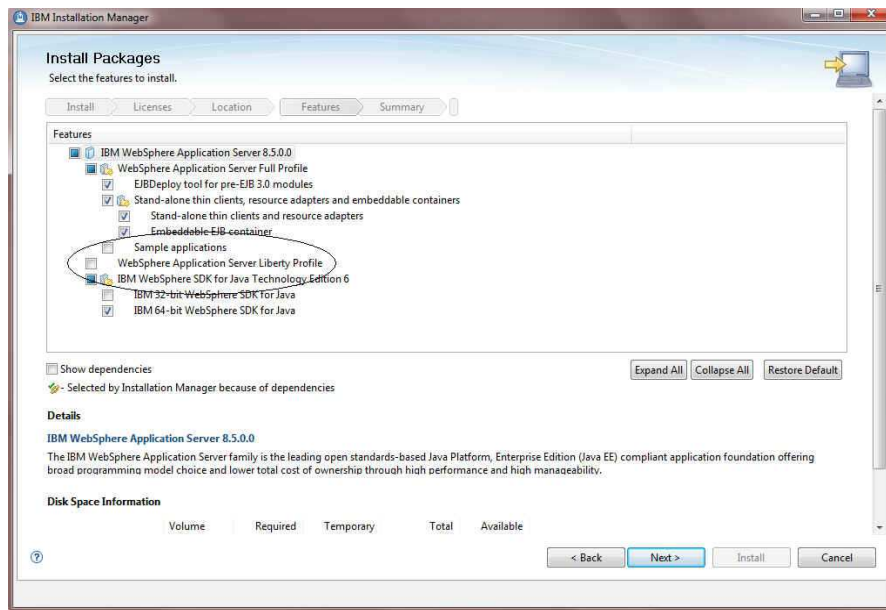

IBM WebSphere SDK Java Technology Edition 7.0.1 has no optional features available for user to select. The architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 to be installed will match the architecture of IBM WebSphere SDK Java Technology Edition 6 installed with WebSphere Application Server V8.5.

It is impossible to modify the architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 after it is installed. This is also true for the IBM WebSphere SDK Java Technology Edition 6 that is installed with WebSphere Application Server V8.5.

Section

Usage scenarios

Here are some usage scenarios.

New optional feature 'WebSphere Application Server Liberty Profile'

5   © 2012 IBM Corporation

The features of the WebSphere Application Server are grouped under the new feature group 'WebSphere Application Server Full Profile'. The default features are not changed from the previous release.
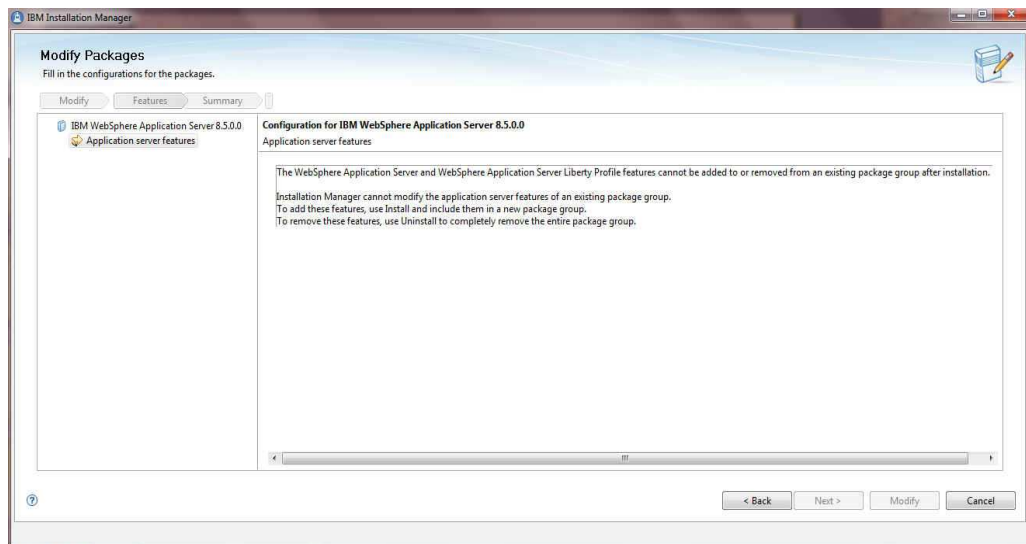

A new optional feature 'WebSphere Application Server Liberty Profile' is added to this release. This new optional feature is not selected by default. In silent mode, use the feature ID 'liberty' to install this new optional feature.

One of the WebSphere Application Server features must be installed

The installation of the WebSphere Application Server is blocked when neither the WebSphere Application Server Full Profile, nor the WebSphere Application Server Liberty Profile features are selected. You must choose one, or both to install.

## WebSphere Application Server features cannot be modified

IBM Installation Manager

Modify Packages
Fill in the configurations for the packages.

Modify   Features   Summary

IBM WebSphere Application Server 8.5.0.0
  Application server features

Configuration for IBM WebSphere Application Server 8.5.0.0
Application server features

The WebSphere Application Server and WebSphere Application Server Liberty Profile features cannot be added to or removed from an existing package group after installation.

Installation Manager cannot modify the application server features of an existing package group.
To add these features, use Install and include them in a new package group.
To remove these features, use Uninstall to completely remove the entire package group.

< Back   Next >   Modify   Cancel

Once the WebSphere Application Server "Profile" features are installed, they cannot be modified.

For example, when the WebSphere Application Server Full Profile and the WebSphere Application Server Liberty Profile feature are installed, they cannot be added or removed later until the WebSphere Application Server is uninstalled.

However, the features under the WebSphere Application Server Full Profile feature group can be modified without restriction.

IBM WebSphere SDK Java Technology Edition 7.0.1 has to be installed on top of WebSphere Application Server V8.5
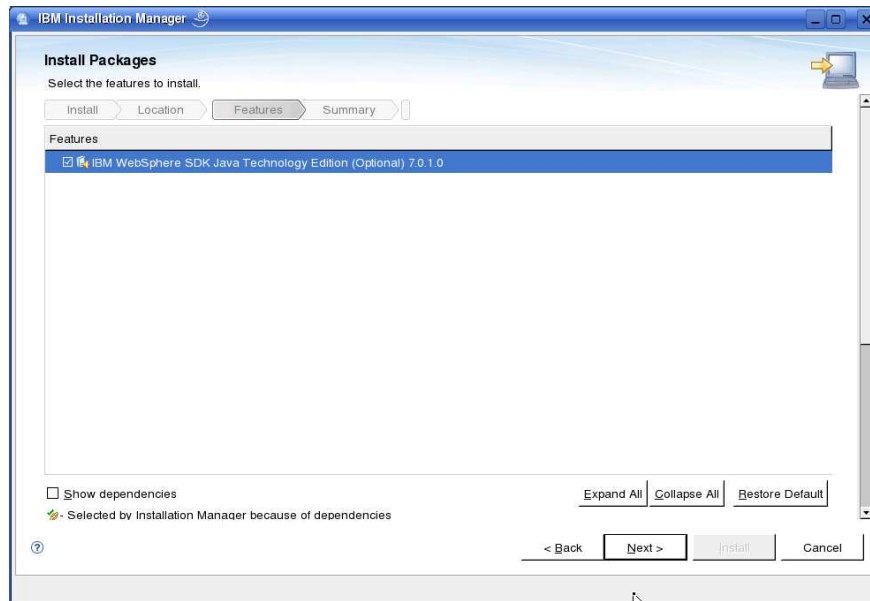

IBM Installation Manager

Install Packages

A package group is a location that contains one or more packages. Extensions can be installed into a common package group only and will share a common user interface. Select an existing package group for the extensions.

Install | Location | Features | Summary

◉ Use the existing package group
◯ Create a new package group

Package Group Name	Installation Directory	Architecture
IBM WebSphere Application Server V8.5	/data/IBM/WebSphere/AppServer_nd_v85_gsa	
IBM WebSphere Application Server V8.5_1	/data/IBM/WebSphere/AppServer_base_v85_gsa	
IBM WebSphere Application Server V8.0	/data/IBM/WebSphere/AppServer_base_v80	

Package Group Name: IBM WebSphere Application Server V8.5

IBM WebSphere SDK Java Technology Edition 7.0.1 must be installed on top of an existing install of WebSphere Application Server V8.5 installation.

There is no optional feature available for IBM WebSphere SDK Java Technology Edition 7.0.1

No optional features are available for you to select when installing IBM WebSphere SDK Java Technology Edition 7.0.1.
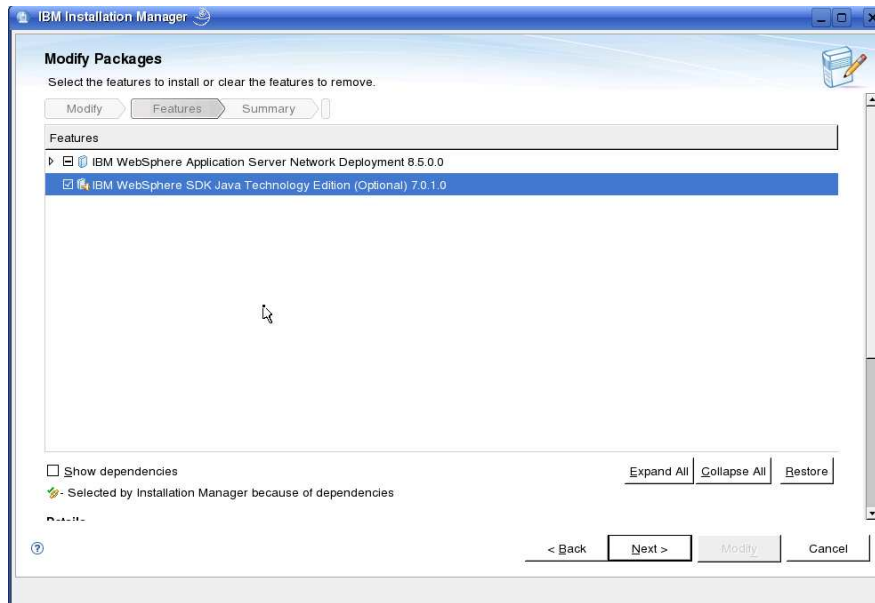

The architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 matches that of IBM WebSphere SDK Java Technology Edition 6

© 2012 IBM Corporation

The architecture selection of IBM WebSphere SDK for Java Technology Edition 6 also applies to IBM WebSphere SDK Java Technology Edition 7.0.1. This is done automatically and there is no action required by users.

Architecture of IBM WebSphere SDK Java Technology Edition 7.0.1.0 cannot be modified

It is not possible to modify the architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 after it is installed. Its architecture will match the architecture of IBM WebSphere SDK Java Technology Edition 6 that was installed when WebSphere Application Server V8.5 release was installed.

Summary

- The installation of the WebSphere Application Server V8.5 has not changed significantly from the previous release

- A new optional feature "WebSphere Application Server Liberty Profile" is added

- The installation of the IBM WebSphere SDK Java Technology Edition 7.0.1 is similar to other optional stack products that are installed on top of WebSphere Application Server V8.5

- The architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 *will match* the architecture of IBM WebSphere SDK Java Technology Edition 6 being written to disk during the installation of WebSphere Application Server V8.5

- The architecture of IBM WebSphere SDK Java Technology Edition 7.0.1 cannot be modified

This slide contains a summery of this presentation.
