IBM WEBSPHERE PARTNER GATEWAY V6.0 – LAB EXERCISE

EDI to ROD Functional Acknowledgment (997) Configuration

> **NOTE:** Education materials and other documentation as applicable including programming manuals, operating guides, physical planning manuals and installation manuals related to the IBM Products may be early versions subject to change.

What this exercise is about

This document describes configuration for the Target participant to be able to send back Functional Acknowledgement(FA) back to the Source participant who is sending an EDI document. This document assumes an EDI to ROD configuration.

Lab Requirements

List of system and software required for the student to complete the lab.

- WebSphere MQ 5.3 with CSD 08 installed

- DB2 8.2 Enterprise server installed

- Data Interchange Services Client 6.0 installed

- WebSphere Partner Gateway V 6.0 (WPG) software installed (This includes the DB loader and the runtime servers)

What you should be able to do

At the end of this lab you should be able to:

- Configure WebSphere Partner Gateway for the Target participant to send enveloped Functional Acknowledgement back to the Source participant in the EDI- ROD Scenario

Exercise Instructions

Some instructions in this lab may be Windows operating-system specific. If you plan on running the lab on an operating-system other than Windows, you will need to execute the appropriate commands, and use appropriate files (.sh vs. .bat) for your operating system. The directory locations are specified in the lab instructions using symbolic references, for example:

Reference Variable	Windows Location	Linux Location
<WPG_HOME>	C:\IBM\WPG\bcghub	/opt/IBM/WPG/bcghub
<LAB_FILES>	C:\WPGLabfiles	/tmp/WPGLabfiles
<TEMP>	C:\temp	/tmp

WPG users can be categorized into 3 administrative roles.

Community Operator: The Community Operator is responsible for managing the day-to-day operation of the hub community. Pre-defined user– cannot be deleted. Acts as "sysadmin" for WPG. Defines and maintains the WPG's capabilities. Typically does NOT send or receive documents

Community
Operator

Community Participant: External business partners to WPG. Can be as many defined as desired

Community
Participant

Community Manager: The Community Manager is the primary driving force within the hub community. Also a participant, but is the principle one. Can only have one Community Manager in WPG. Operational manager for the community

Community Manager

Lab Prerequisite

The following are the pre-requisites before you begin the configuration.

EDI to ROD Configuration is established

Lab Files

You would need a copy of the following files in your <LAB_FILES>

MAP File: S_DT_EDI_TO_ADF.eif

Input File: edi2adf.inp

Part 1: Introduction

Objective:

The source trading partner sends an EDI ISA document which needs to be converted to ROD and sent to the target trading partner. The target partner should be able to send an Functional Acknowledgement back to the source partner

Figure-1
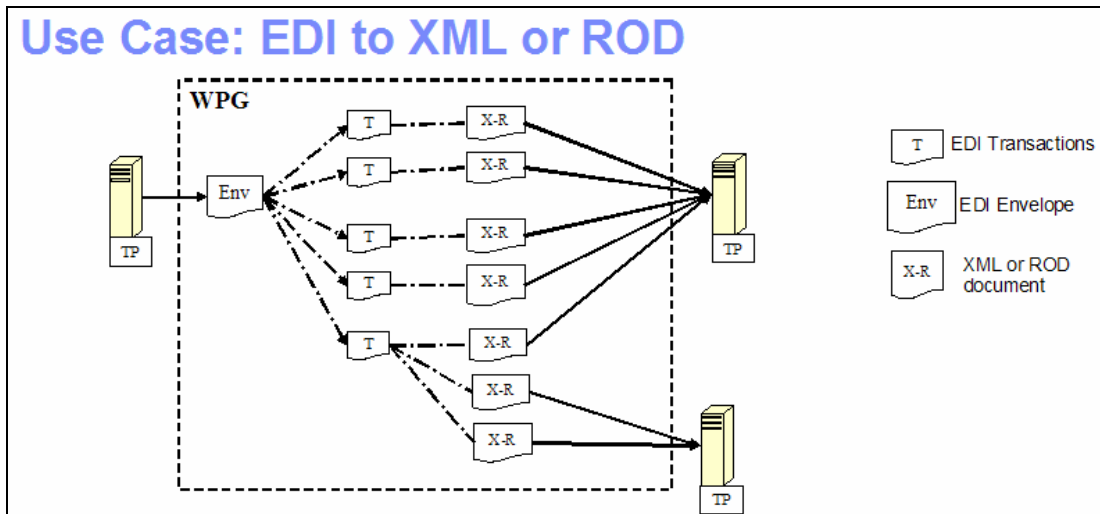

Figure-1 shows the high level representation of the actions that take place in an EDI to ROD or XML flow between 2 trading partners.
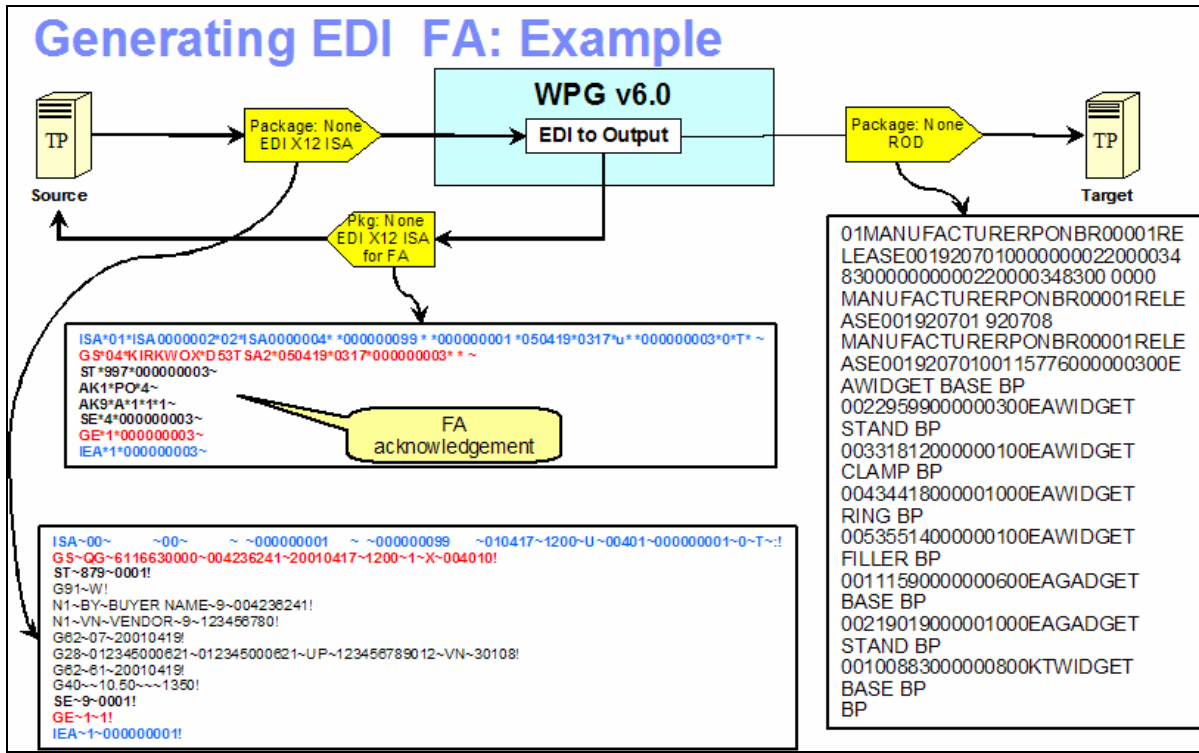

Figure-2

Generating EDI FA: Example

Figure-2 shows the final outcome of the EDI to ROD lab. An incoming EDI X12 ISA with None packaging from the source trading partner passes through the hub where the EDI is translated to ROD and the ROD is sent to the target trading partner. A functional acknowledgement is sent back to the source partner.

The 1st step in the hub after receiving the EDI document is de-enveloping where the EDI transactions are extracted from EDI interchange. Each of the EDI transaction is routed back into the document manager to be processed, based on the connection configuration for that transaction.

We have already discussed the EDI- ROD scenario in the EDI-ROD lab. The following steps discuss the generation of FA.

Step 1:

The FA attribute assigned on the EDI transaction connection lets the hub know that it has to generate the FA. An FA is generated and sent back to the hub for further processing. Remember that that FA is sent from the target to the source trading partner. So we need to configure connection from target to source partner.

Step 2:

The EDI transaction that was generated in the translation phase goes through the enveloping phase. Based on the scheduling of the enveloper and other rules, the ready EDI transactions will be enveloped into an EDI X12 ISA envelope.

Envelope FA – Connection Flow
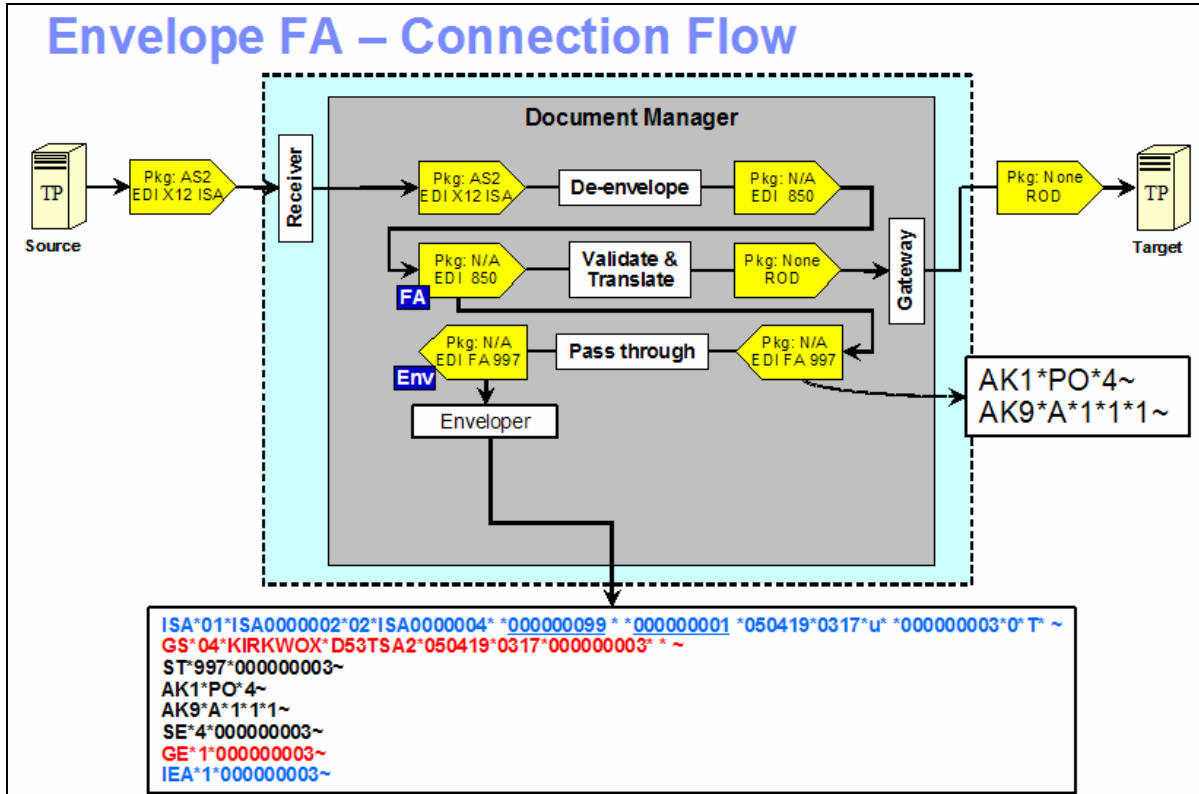

Step 3:

The enveloped EDI X12 ISA then flows back through the document manager, for any final packaging that has been configured by the connection. The EDI is then sent to the receiver Trading partner through the Gateway for target trading partner.

Envelope FA – Connection Flow
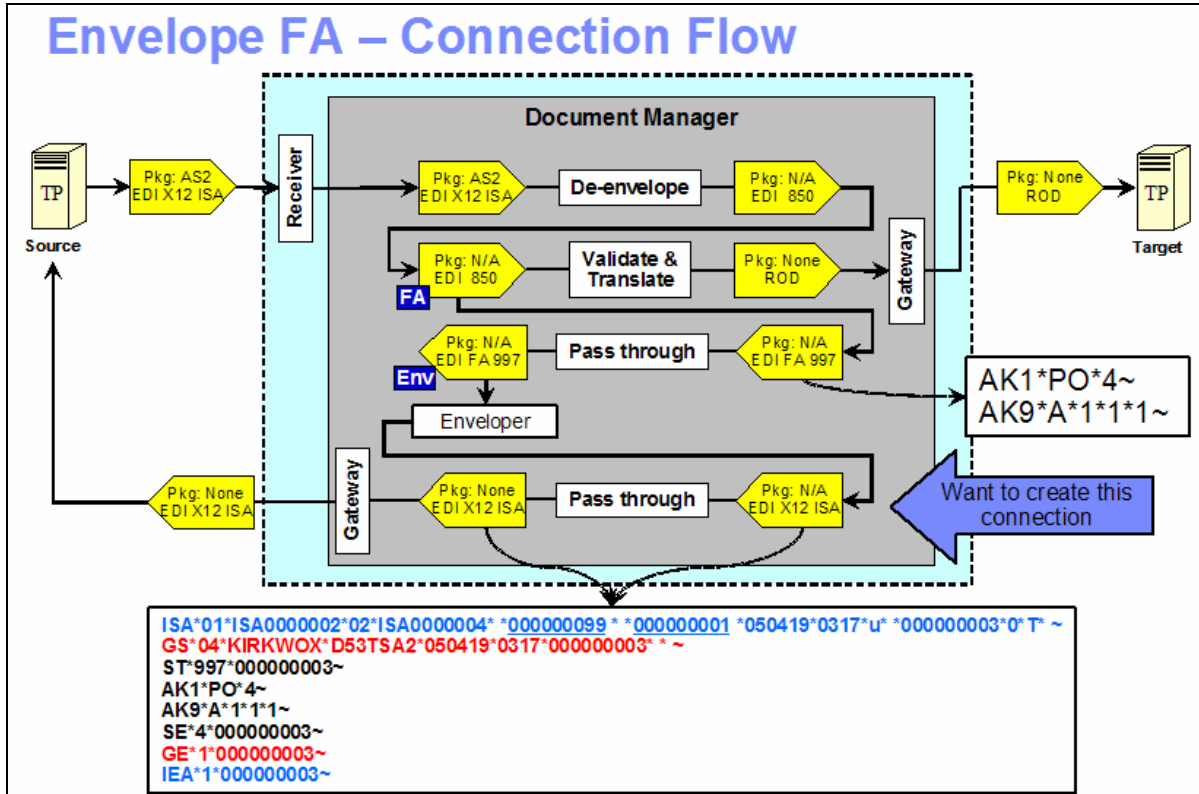

Part 2: Starting MQ Components and WPG Servers

Note: Make sure that the database server is started

Starting the required MQ services:

Open a command window and issue the following commands.

_____ 1. **Start MQ queue manager**

strmqm   bcg.queue.manager

_____ 2. **Start MQ Broker**

strmqbrk -m bcg.queue.manager

_____ 3. **Start services on the Queue manager**

strmqcsv bcg.queue.manager

_____ 4. **Run MQ listener (9999 is the default port used by the installer)**

runmqlsr -t tcp -p 9999 -m bcg.queue.manager

Starting WPG Servers

Open a command window and change directories to **<WPG_HOME>/bin**

_____ 1. **Starting Console**

bcgstartserver bcgconsole

_____ 2. **Starting Receiver**

bcgstartserver bcgreceiver

_____ 3. **Starting Doc. Manager**

bcgstartserver bcgdocmgr

Part 3: Logging into the Community Console

____ 1. If you have already logged into the Community console previously and followed the instructions in **wpgv6_basic_configuration**, use the following authentication information

>   User Name: **hubadmin**
>
>   Password: **hub1admin**
>
>   Company Name: **Operator**

Part 4: Checking the Map

Community Operator has the privilege for checking the Map

Community Operator

____ **1.   Checking Map**

     __ a. **Hub Admin ➔ Hub Configuration ➔ Maps ➔ EDI FA Maps**.   The map **&DT_FA997V2R4** should be listed

     __ b. Click on the view🔍 icon.

> **FA Map Association**
>
> • Manage EDI Functional Acknowledgement
>
> Map Name: &DT_FA997V2R4
>
> Description: Functional Acknowledgment 997 - X12V2R4
>
> **System Level**
> ☐ Package: AS
> ☐ Package: None
> ☐ Package: Backend Integration (1.0)
> ☐ Package: N/A
>
> Save   Cancel

____ 1.   **Associating FA Map with Protocol**

     __ a. Click the 🔲 icon next to **Package: N/A**

     __ b. Check the check box next to **Protocol: X12V2R1.**

     __ c. Click **Save**.

FA Map Association

Map Name: &DT_FA997V2R4

Description: Functional Acknowledgment 997 - X12V2R4

System Level
- ☐ Package: AS
- ☐ Package: None
- ☐ Package: Backend Integration (1.0)
- ☐ Package: N/A
  - ☐ Protocol: EDI-X12 (ALL)
  - ☑ Protocol: X12V2R1 (ALL)

Save | Cancel

You have successfully associated the FA Map with X12V2R1 Protocol.

Part 5: Creating Targets, Participants and Gateways

Note: You have already created the target, participants and gateways before in the "WPG Basic Configuration" Lab. If not please complete the "WPG Basic Configuration" Lab before you proceed.

Part 6: Create Interactions

New Interactions can be created only by Community Operators.

Community Operator

For the EDI to ROD Scenario, We need to create 4 interactions. One interaction corresponding to the Deenvelope and the second one corresponds to the transformation of the resultant deenveloped message to ROD. The third interaction corresponds to the enveloping of the FA that is generated. The fourth interaction is for sending the enveloped FA to the Target partner.

The First 2 interactions were created as part of the EDI to ROD lab.So we need to create the 3rd and 4th Interactions.

____ **1.** **Creating Interaction For enveloping the FA(997)**

    __ a. Go to **Hub Admin ➔ Hub Configuration ➔ Document Flow Definition**

        __ 1) Click **Manage Interactions located** at right corner of the screen

        __ 2) Select "**Create Interaction**"

        __ 3) Create the following source to target interaction

        Package: **N/A**
        Protocol: **&DT99724 (ALL)**
        Document Flow: **997 (ALL)**

        To

        Package: **N/A**
        Protocol: **&DT99724 (ALL)**
        Document Flow: **997 (ALL)**

        __ **a)** Click on the icon next to **Package: N/A** under the **Source** . This should list all the protocols available under **Package:N/A**.

        __ **b)** Click on the icon next to **Protocol: &DT99724 (ALL)** under the **Source**. This should list all the Document Flows available under **Protocol: &DT99724 (ALL)**.

        __ **c)** Click on the radio button next to **Document Flow**: 997 (ALL) under the **Source**.

        __ **d)** Click on the icon next to **Package: N/A** under the **Target**. This should list all the protocols available under **Package: N/A**.

        __ **e)** Click on the icon next to **Protocol: &DT99724 (ALL)** under the **Target**. This should list all the Document Flows available under **Protocol: &DT99724 (ALL)**.

        __ **f)** Click on the radio button next to **Document Flow**: 997 (ALL) under the **Target**.

        __ g) Select **"Pass Through "** from the **Action** drop down menu.

__ h) Click **Save**
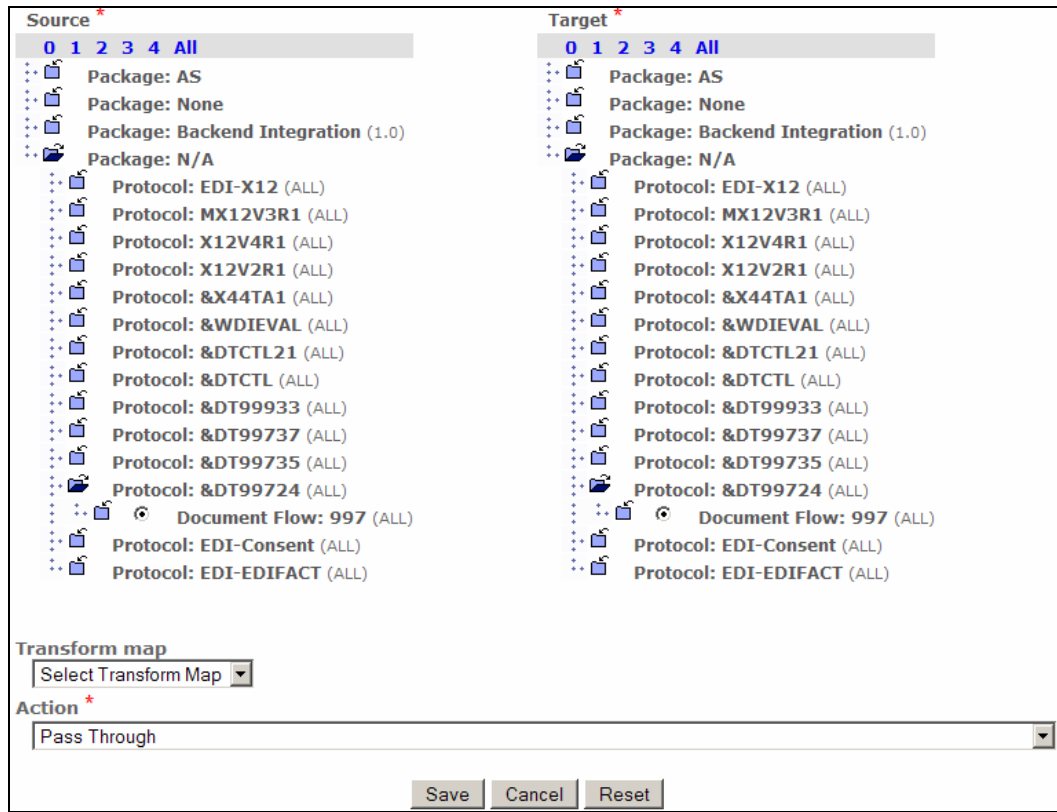

___ 2. **Creating Interaction For sending the enveloped FA(997) to the Target Partner**

__ a. Go to **Hub Admin ➔ Hub Configuration ➔ Document Flow Definition**

__ 1) Click **Manage Interactions located** at right corner of the screen

__ 2) Select "**Create Interaction**"

__ 3) Create the following source to target interaction.

Package**: N/A**
Protocol**: EDI-X12 (ALL)**
Document Flow**: ISA (ALL)**

To
Package**: None**
Protocol**: EDI-X12 (ALL)**
Document Flow**: ISA (ALL)**

__ **a)** Click on the 🗁 icon next to **Package: N/A** under the **Source**. This should list all the protocols available under **Package: N/A**.

__ **b)** Click on the 🗁 icon next to **Protocol: EDI-X12 (ALL)** under the **Source**. This should list all the Document Flows available under **Protocol: EDI-X12 (ALL)**.

__ **c)** Click on the radio button next to **Document Flow**: **ISA (ALL)** under the **Source**.

__ **d)** Click on the ☐ icon next to **Package: None** under the **Target**. This should list all the protocols available under **Package: None**.

__ **e)** Click on the ☐ icon next to **Protocol: EDI-X12 (ALL)** under the **Target**. This should list all the Document Flows available under **Protocol: EDI-X12 (ALL)**.

__ **f)** Click on the radio button next to **Document Flow**: **ISA (ALL)** under the **Target**.

__ g) Select **"Pass Through"** from the **Action** drop down menu.

__ h) Click **Save**.

You have successfully created the interactions required for the scenario.

Part 7: Enabling B2B Capabilities

B2B capabilities can be enabled by Community Operators, Community Manager and Community Participants

Community Operator **Community Participant** **Community Manager**

Community Operator: Can enable B2B Capabilities for all the participants including the

Community Manager Profile

Community Manager: Can enable B2B Capabilities for its own profile

Community Participant: Can enable B2B Capabilities for its own profile

Note: Some of the B2B Capabilities for the participants may have already been enabled from previous scenarios.

B2B Capabilities specify what particular Package, Protocol, and Document Flows the Participant Supports. Enabled B2B capabilities for a participant define the types of documents the participant will be allowed to send and/or receive. The B2B capabilities for a partner are a subset of the Package, Protocol, and Document Flows that Hub supports.

_____ 1.   **Enable B2B Capabilities for the Source Trading Partner**

For Go to **Account Admin** ➔ **Profiles** ➔ **Community Participant** and click on Search button. This should list all the Participants created

__ 1) Select the Source Trading Partner, **Manager** and click on the 🔍 icon. This will activate the **TP1** profile

Note:

Remember that FA flows from the participant that receives the rod to the sender of edi document. So the Source in this case would be **Manager** and Target is **TP1**

__ b. Click on **B2B Capabilities** menu item.

Since we are enabling the B2B capabilities of the source trading partner, we only need to enable the Package, Protocol and Document Flow for source side.

Enable the following **Package, Protocol, and Document Flow** by following the instructions below

Package**: N/A**
Protocol**: &DT99724 (ALL)**
Document Flow**: 997 (ALL)**

Perform the following steps under the "Set Source" column of the B2B Capabilities

__ 1) Click on the icon in the row corresponding to **Package**: **N/A.** should be changed to

__ 2) Click on the icon next to **Package: N/A**. This should list all the protocols available under **Package: N/A**.

__ 3) Click on the icon in the row corresponding to **Protocol**: **&DT99724 (ALL). v**

__ 4) Click on the icon next to **Protocol**: **&DT99724 (ALL)**. This should list all the Document Flows available under **Protocol**: **&DT99724 (ALL)**

__ 5) Click on the icon in the row corresponding to **Document Flow**: **997 (ALL).** should be changed to

Enable the following **Package, Protocol, and Document Flow** by following the instructions below

Package**: N/A**
Protocol**: EDI-X12 (ALL)**
Document Flow**: ISA (ALL)**

Perform the following steps under the "Set Source" column of the B2B Capabilities

__ 1) Click on the icon in the row corresponding to **Package**: **N/A**. should be changed to

__ 2) Click on the icon next to **Package: N/A** . This should list all the protocols available under **Package: N/A**.

__ **3)** Click on the icon in the row corresponding to **Protocol**: **EDI-X12 (ALL).** should be changed to

__ **4)** Click on the icon next to **Protocol**: **EDI-X12 (ALL)**. This should list all the Document Flows available under **Protocol**: **EDI-X12 (ALL)**

__ **5)** Click on the icon in the row corresponding to **Document Flow**: **ISA (ALL).** should be changed to

Profile : Manager : B2B Capabilities

You have successfully enabled the B2B capabilities for the Manager and TP1 trading participants

Part 8: Creating Envelope Profile

Note: You have already created the envelope profile "EnvProfile 1" before in the "WPG Basic Configuration" Lab. If not please complete the "WPG Basic Configuration" Lab before you proceed.

.

Part 9: Creating Participant Connections

Participant Connections can be enabled by Community Operators and Community Manager

Community Operator   **Community Manager**

_____ 1. **Creating Participant connections**

__ a. Go to **Account Admin ➔ Participant Connections**

Note:

Remember that FA flows from the participant that receives the rod to the sender of edi document. So the source in this case would be **Manager** and Target is **TP1**

---

e.g: if your EDI – ROD participant connection is from **TP1** to **Manager** (Community Manager), the FA connection will be **Manager** to **TP1**

__ 1) Select **Manager** from the Source drop down menu.

__ 2) Select **TP1** from the Target drop down menu.

__ 3) Click on **Search**.

__ 4) Based on prior connections, there may be other connections that are not needed for this scenario.

__ 5) De Activate the Connections those are green by clicking on the ✘ icon. The connections should turn to grey when deactivated.

__ 6) You should atleast have the two connections that are highlighted by red arrow in the following picture.

The participant connection **N/A(N/A) : &DT99724(ALL) : 997(ALL)** to **N/A(N/A) : &DT99724(ALL) : 997(ALL)** is used for enveloping the FA(997) that is generated.

The participant connection **N/A(N/A) : EDI-X12(ALL) : ISA(ALL)** to **None(N/A) : EDI-X12(ALL) : ISA(ALL)** is used for sending the enveloped FA(997) to the target partner.

__ 7) Click on **Activate** button corresponding to each connection to activate the connection. It should turn to green indicating it is activated.

Part 10: Configuring the Attributes

In order for the FA to be generated and to be enveloped and sent, we need to configure some attributes in B2B Capabilities of the Participants

____ 1.   Go to **Account Admin ➔ Profiles ➔ Community Participant** and click on Search button. This should list all the Participants created

     __ a. Select the Trading Partner **TP1** by clicking on 🔍 icon

____ 2.   Click on B2B Capabilities menu item

     __ a. Click on the icon 📁 next to **Package: N/A.**

     __ b. Click on icon ✏️ next to **Protocol: X12V2R1 (ALL)**

     __ c. This should open a page where can change the attributes.

     __ d. Locate the **"FAMap"** attribute and select **"&DT_FA997V2R4"** from the drop down menu

     __ e. Click **Save**

Max error level at Transformation	Max error level at Transformation	No value provided	No value provided	[ ]
FAMap	FAMap	&DT_FA997V2R4	Locally Assigned	&DT_FA997V2R4 ▼ ☐

You have successfully configured the attributes required for this scenario.

Part 11: Running the Scenario

____ 1.   Go to <LAB_FILES> directory

____ 2.   Open the edi2adf.inp file.

____ 3.   The Source and Target participant id's are located at the 7th and 9th fields in the ISA segment. The first id is the source ID(TP1) and the second the target ID(Manager)

```
ISA*00*         *00*          *  *987654321      *  *123456789
*930419*0021*U*00200*000000004*0*T*:!
```

The lab input files are already updated to reflect the Manager and TP1 id's.

____ 4.   Copy the edi2adf.inp file and place it in the **C:\WPGLabs\edifiletarget\Documents\Production** directory.

____ 5.   The EDI document should be de-enveloped and waiting to be translated to rod

____ 6.   After this, the document will be translated to rod document

____ 7.   A functional Acknowledgement is generated and enveloped

The status of the document in the system can be viewed by using the Document Viewer

Go to **Viewers ➔ Document Viewer**

Provide the approximate start time when you actually started this transaction and click on Search

Note the entries for the FA document which is enveloped and sent from Manager (Community Mgr) to TP1

____ 8.   The rod document is sent to the Manager filegateway

The destination file gateway location is **C:\WPGLabs\Manager\filegateway**

____ 9. The enveloped FA document is sent to the edi document sender filegateway

The file gateway location is **C:\WPGLabs\TP1\filegateway**

What you did in this exercise

In this exercise, you have enabled B2B capabilities and created participant connections necessary for target trading partner to be able to send Functional Acknowledgement back to the Source trading partner who is sending the EDI document.

This page is left intentionally blank.
