

IBM Information On Demand: Unlock The Business Value Of Information

Information Delivery In The Web 2.0 World

New Intelligence

Let's look at some new technologies that make it even easier to gather all the relevant information for the task at hand.

IBM

Web 2.0 Gives Us New Leverage To Access Data

Web 1.0 was about **connecting computers** and making technology more efficient for computers.

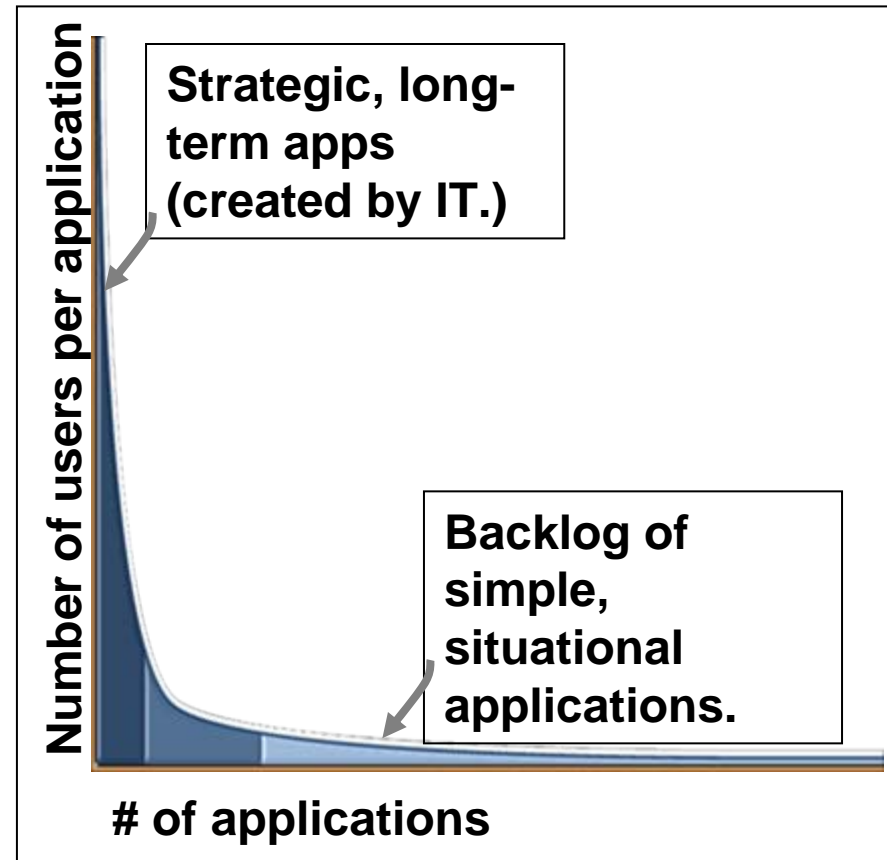

Web 2.0 is about **delivering information to humans to help them with the task at hand**

Web 2.0 applications are often called situational applications

Situational Applications

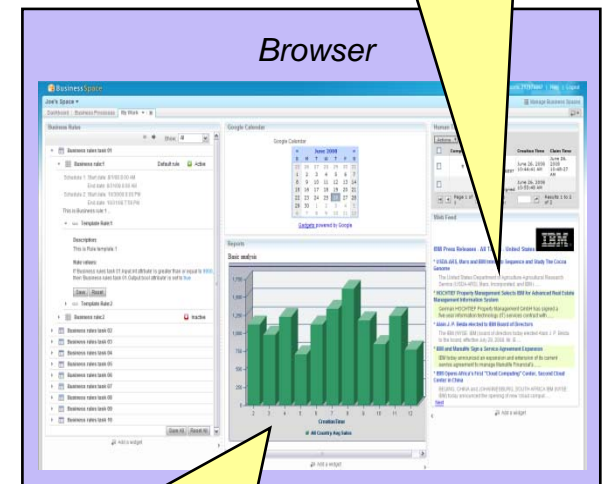

- IT focuses on the development of strategic long term applications
 - ▶ Simple short term and tactical applications are often unaddressed
- Web 2.0 is a new technology that makes it dramatically easier to create situational applications

Example Of A Situational Application

- Web pages are assembled by dragging and dropping widgets
- Widgets
 - ▶ Small program components that deliver a specific service
- Mashup
 - ▶ A lightweight application assembled from widgets wired together and sharing data
 - ▶ Little to no technical skills required

This is a widget displaying a web news feed

This is a graph widget displaying data returned from an enterprise system.

What Is A Data Feed?

- A **data feed** is an XML data format used for providing users with frequently updated content
- XML data feeds are emerging as a common way for organizations to expose existing enterprise data
- XML data feeds can be created from Enterprise, departmental, and personal sources like Excel
- ATOM and RSS are the two most common format data feeds
- A widget that reads and displays a data feed is referred to as a “feed reader”

Example of an Atom 1.0 Feed

An example of a document in the Atom Syndication Format:

```
<?xml version="1.0" encoding="utf-8"?>
<feed xmlns="http://www.w3.org/2005/atom">

  <title>Example Feed</title>
  <subtitle>A subtitle.</subtitle>
  <link href="http://example.org/feed/" rel="self"/>
  <link href="http://example.org/" />
  <updated>2003-12-13T18:30:02Z</updated>

  </entry>

</feed>
```

What Makes Mashup Technologies Unique?

| | | Mashup Development | Traditional IT |
|-------------------|----------------------|--|---------------------------------|
| Scope | Time to value | Days to weeks | Months to years |
| | Lifespan | Variable, often short | Long lived |
| Process | Dev. phases | Ad-hoc or good-enough | Defined, scheduled |
| | Governance | De-centralized, community | Formal, centralized |
| | Evolution | Organic | Top-down, centrally driven |
| Users | Application builders | LOB, individuals, groups | Corporate IT |
| | Targeted users | Small teams or known user | Large groups |
| Technology | Technology | Mashup, REST, RSS, ATOM, AJAX, XML, etc. | Portal, SOAP, WS-*, J2EE,, etc. |

IBM Mashup Center Is A Complete Platform To Create And Deliver Mashup Situational Applications

- **Create** mashup web pages by reusing existing data and services
- **Unlock** Enterprise, Web, Personal and Departmental Information
- **Develop** widgets from enterprise systems
- **Discover** and share mashups, widgets, feeds, and services
- **Transform** information into new feeds

With The IBM Mashup Center You Can Build Widgets, Create Feeds, Assemble, And Deliver Mashups

Lotus Mashups

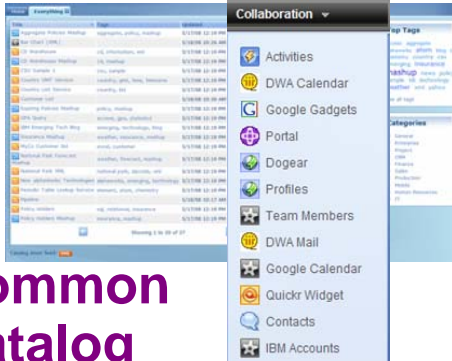

Widget IDE

Wire Widgets & Assemble Mashups

InfoSphere MashupHub

Create REST-style Feeds

Common Catalog

Demo: Sales Call Mashup

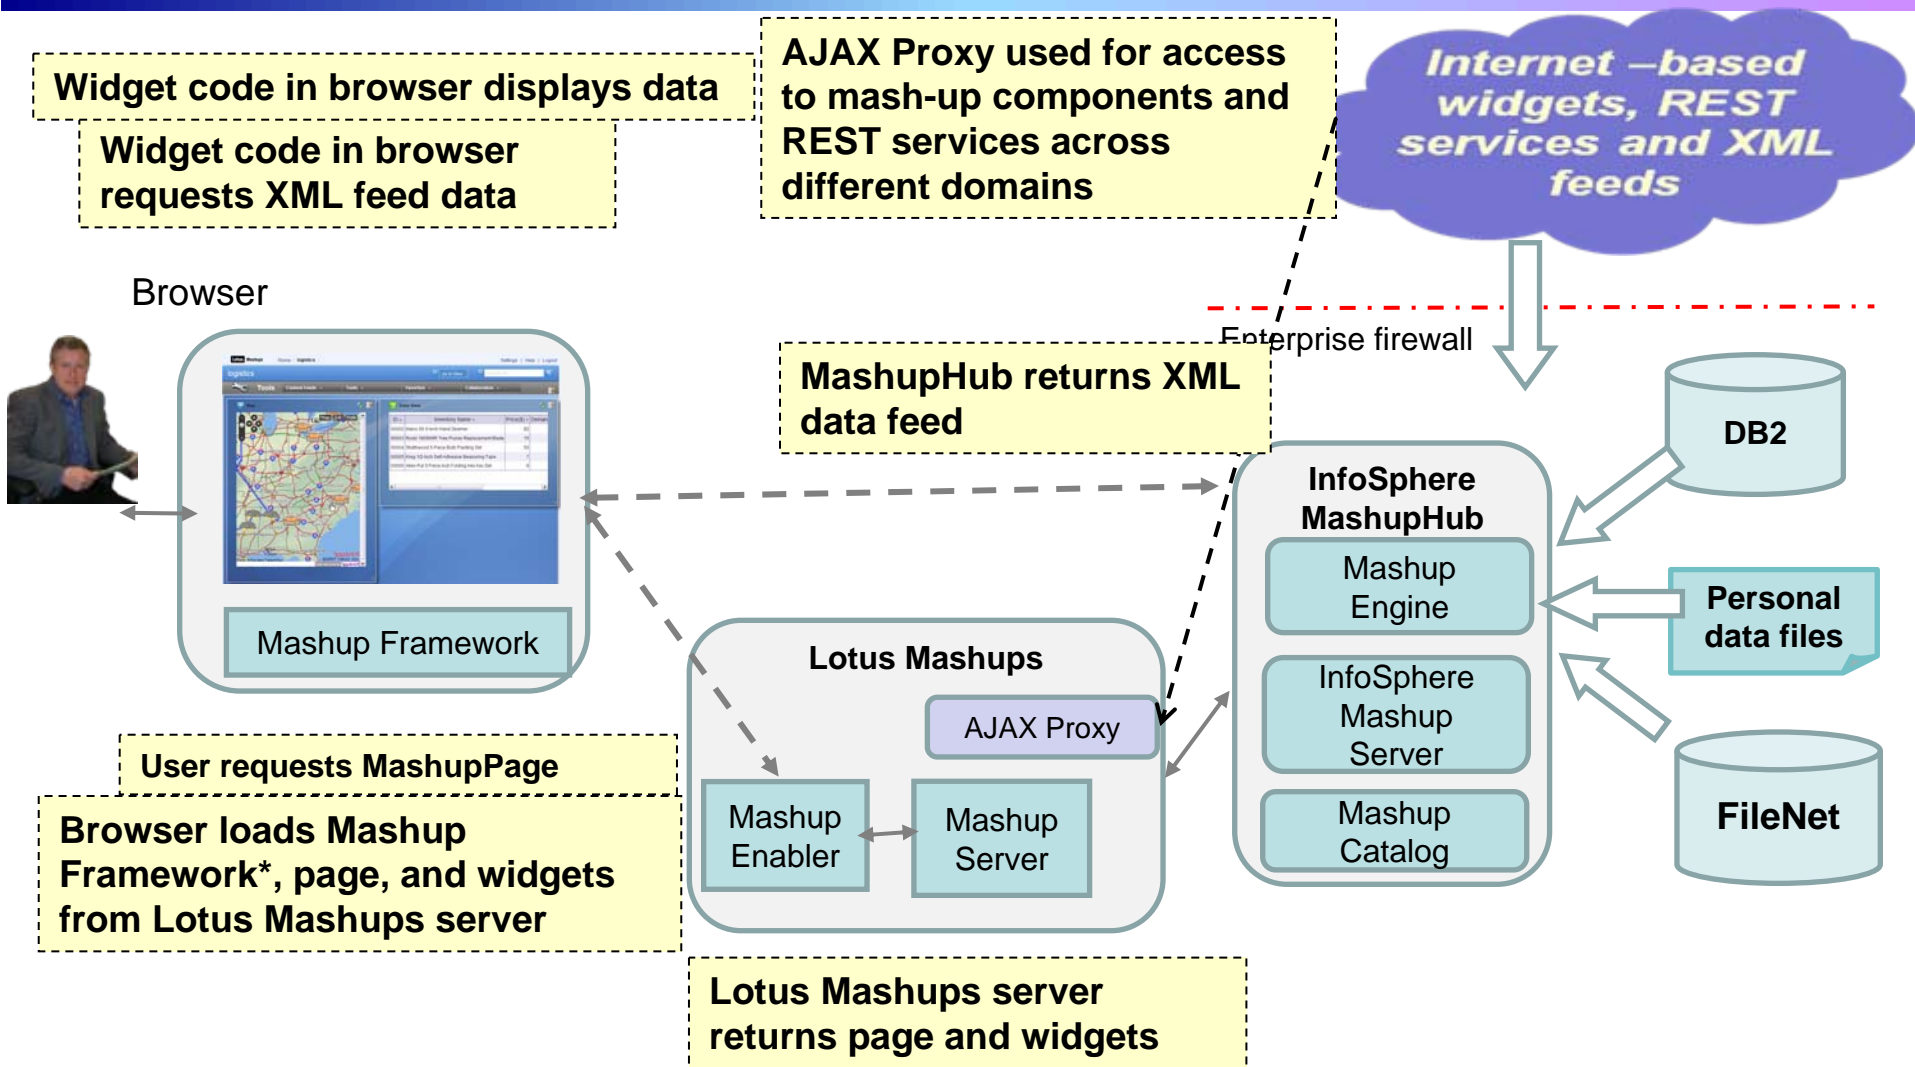

- Sales needs to combine personal contact info, enterprise data, and live web news
- Show creating Mashup with
 - ▶ Personal customer spreadsheet contact info
 - ▶ Customer trade data
 - ▶ Google charts on stock history
- Sales using Mashup to prepare for customer calls.

Mashup Catalog Facilitates Easy Sharing And Reuse Of Resources

- A single common central catalog for mashup resources
- Enables easy discover and sharing of Mashups, Widgets, and Feeds
- Provides common place for security and to govern access and use
- Uses Web 2.0 social computing conventions of tagging and rating to promote collaboration and re-use
- Assemble re-usable mashups, widgets, and feeds into situational applications as needed

IBM Mashup Center Makes It Easier To Gather Information For Each Task At Hand

Infusion Of New Intelligence !

MashupHub Creates Data Feeds For Use By Feed Readers

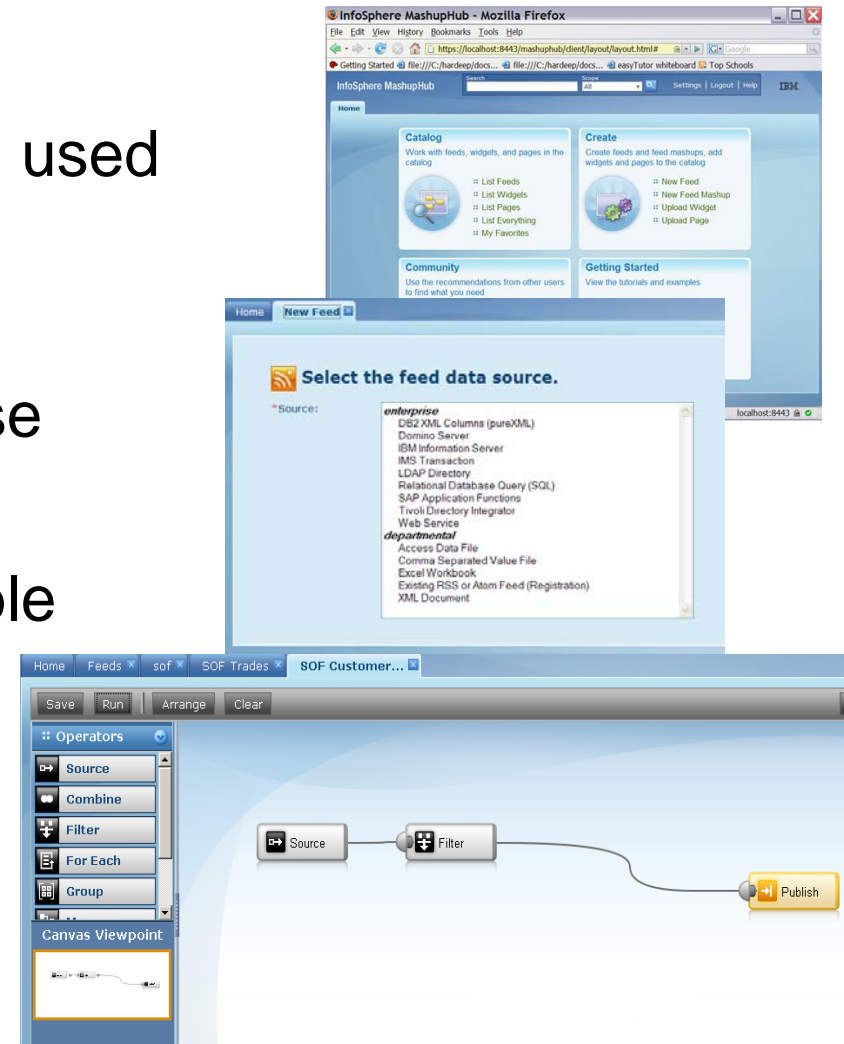

IBM Mashup Center Leads In Mashup Capabilities

- Easily create feeds from enterprise, personal, and web sources
 - ▶ Supports relational databases (SQL), DB2 pureXML, SAP, IMS, Web Services, Domino, ...
 - ▶ And Microsoft Access, Excel spread sheets, XML, RSS feeds
 - ▶ Microsoft Popfly has no way to create direct feeds to databases or other sources
 - ▶ Microsoft Popfly is a hosted service, accessing enterprise data creates a security risk.
 - ▶ BEA Portal needed to access enterprise data sources
- Supports standard format data feeds (ATOM, RSS, and XML)
 - ▶ Oracle Ensemble has no ATOM or RSS support
- Graphical tool to mashup data feeds
 - ▶ Can easily combine, merge, filter, transform incoming feeds to create feed with the data you need
 - ▶ Oracle Ensemble data feeds require hand coding
 - ▶ BEA Pages lack data mashup capabilities
 - ▶ Microsoft Popfly lacks mashup capabilities

Demo: InfoSphere MashupHub

- MashupHub demo showing construction of enterprise feed used in previous demo.
- Create access to host database
- Create “filter” to subset data
- Create “feed” to make it useable
- Publish in catalog for reuse

Analysts Cite IBM's Leadership In The Space.....

“What IBM is offering here...is a full suite of products designed to address the needs of developers, while providing a front-end, self-service mashup composition product for business users.” *

"Mashups hold the promise of widening access to enterprise data by freeing it from the application in which it is stored. For some IT organizations, mashups provide a business-ready proving ground for the investments they have made in an SOA."

“Gartner analyst Anthony Bradley credits IBM with being the first major enterprise player to put together a "coherent mashup platform"

* Source for Gartner/IDC: “Application Development Trends: “IBM's Mashup Play”, John K. Waters. June 9, 2008.

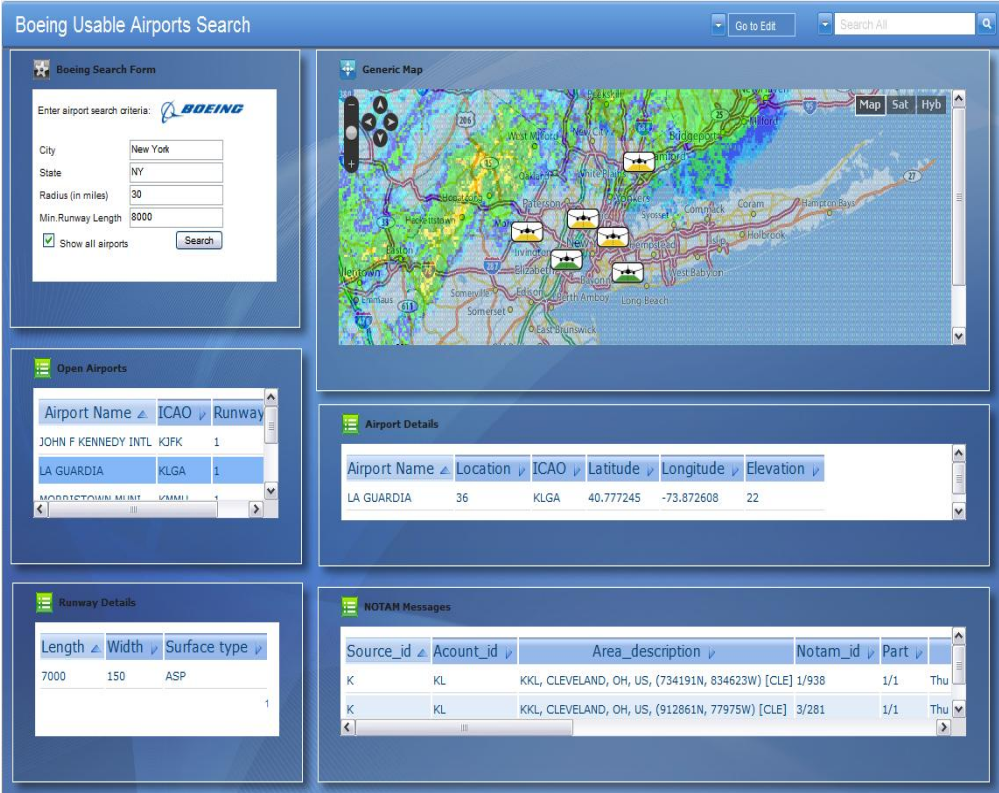

Usable Airport Search Mashup

Scenario:

- ▶ Need for authorities to use existing data and systems to react to unexpected events and develop new capabilities.
- ▶ During Hurricane Katrina authorities could not quickly use existing systems to find airports that were opened and had runways with enough capacity to land transport planes carrying relief supplies.

Results:

- ▶ Within three weeks Boeing and IBM had deployed mashup capability using IBM's Mashup Center. Boeing successfully demonstrated the capability to FAA, DoD, DHS.

The screenshot shows the 'Boeing Usable Airports Search' interface. It features a search form on the left with fields for City (New York), State (NY), Radius (30 miles), and Min. Runway Length (8000). A 'Search' button is present. Below the form is a table of 'Open Airports' with columns for Airport Name, ICAO, and Runway. The table lists JOHN F KENNEDY INTL (KJFK), LA GUARDIA (KLGA), and MODERNA MILIT (YAMH). To the right is a 'Generic Map' showing the New York area with airport icons. Below the map is an 'Airport Details' table for LA GUARDIA (KLGA) with columns for Airport Name, Location, ICAO, Latitude, Longitude, and Elevation. At the bottom is a 'Runway Details' table with columns for Length, Width, and Surface type, showing 7000, 150, and ASP. On the far right is a 'NOTAM Messages' table with columns for Source_id, Account_id, Area_description, Notam_id, and Part, showing two entries for KKL in Cleveland, OH.

Samet M. Ayhan, Boeing: "The IBM Mashup tool offers a new approach for quick web application development, where disparate data sources can be fused on a single environment with reusable components in order to make better decisions."
