Modeling, Architecture, and Construction Keynote

Daniel Berg STSM, IBM Rational Software danberg@us.ibm.com

Innovate2010

The Rational Software Conference

Let's build a smarter planet.

The premiere software and product delivery event.

Originally presented in Orlando by Greg Sikes

Director, Architecture & Modeling IBM Rational Software

George LeBlanc

Program Director, Architecture, Design & Construction IBM Rational Software

Agenda

- Vision for Architecture Management
- Portfolio evolution and roadmap

Customer Success: Create and sustain market demand Hydraulic hybrid delivery vehicles - Eaton / UPS

What's smart?

- Innovative technology for urban delivery trucks in stop-and-go traffic
- Smart software to optimize energy usage and reduce greenhouse gases

Smarter business outcomes

- 60-70% increase in fuel economy, according to EPA
- 40% reduction in CO₂ emissions

How Rational enables smarter products

- Systems architecture and software design and development to optimize system performance
- Automatic generation of in-vehicle software code

Ikerlan Smarter wind power solutions

What's smart?

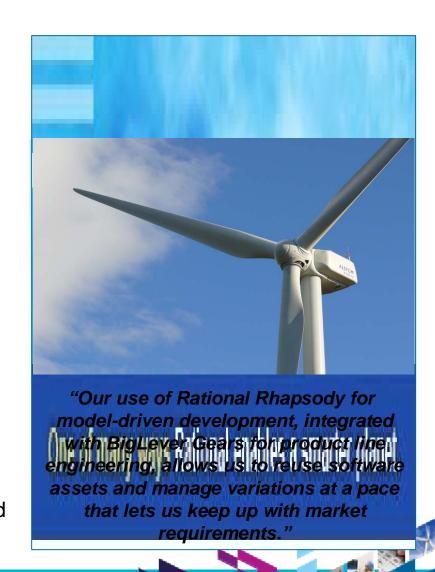

- Wind turbine systems that automatically optimize performance based on environmental factors
- Customized product variations that address the needs of a global energy market

Smarter business outcomes

- 90% reduction in development time for each customized wind turbine model
- 25% reduction in cost of development for wind turbine control systems

How Rational enables smarter products

- Model driven development for optimization of wind turbine control systems
- Product line engineering to manage software-based product variations

Businesses are facing unprecedented challenges

Globalization

Differentiation

Business transformations

Market shifts

Continual customer innovation

Shifts from Operational to Strategic IT

> Seize business opportunities

Execute with reduced risk and cost

Achieve precision in desired business outcomes

Transparency, Regulatory Compliance

Mergers and **Acquisitions**

> **Business Continuity** Management

Regulatory mandates

IT Saturation

How can architecture help your business?

Understand What You Have

- Current state analysis
- Your IP and Assets

Satisfy Mandated Compliance

- Regulatory or contractual
- DoDAF, TOGAF, FEA (iRMA), etc.

Manage the Portfolio

- Applications/Products
- Improved reuse across organization

Visualize and Communicate

Beyond basic drawing tools

Manage Outsourcing

- Customer: Reg'ts, specs, testing
- Vendor: Actual architectures

Improve What You Have

- Find incremental improvements
- Manage business transformation

Pass an Audit

- Architecture & business transparency
- Repeatable, documented

Return on Assets

 Leverage elements across subsystems and product lines

Common Project Starting Points

Initiate new projects from a common starting point based on an EA model

Manage Packaged Applications

• Integrate with rest of architecture

Customers value architecture in different ways

CIO EA Portfolio Manager **Business**

Business Planning

Architecture expresses my business needs and the collaboration between

various stakeholders

Analyst

- Cost reduction
- Risk reduction
- •Time to value
- Time to market

Architecture drives the implementation

> Solution **Architect**

- Rework required
- Safety record

Engineering

Systems

Engineer

Project

Manager

Architecture is documentation of deployed applications and

systems

Developer

Tester

- Time to release
 - SLOC productivity

Agile development

Architecture is in the code

- Problem determination efficiency
- Defect closure rate

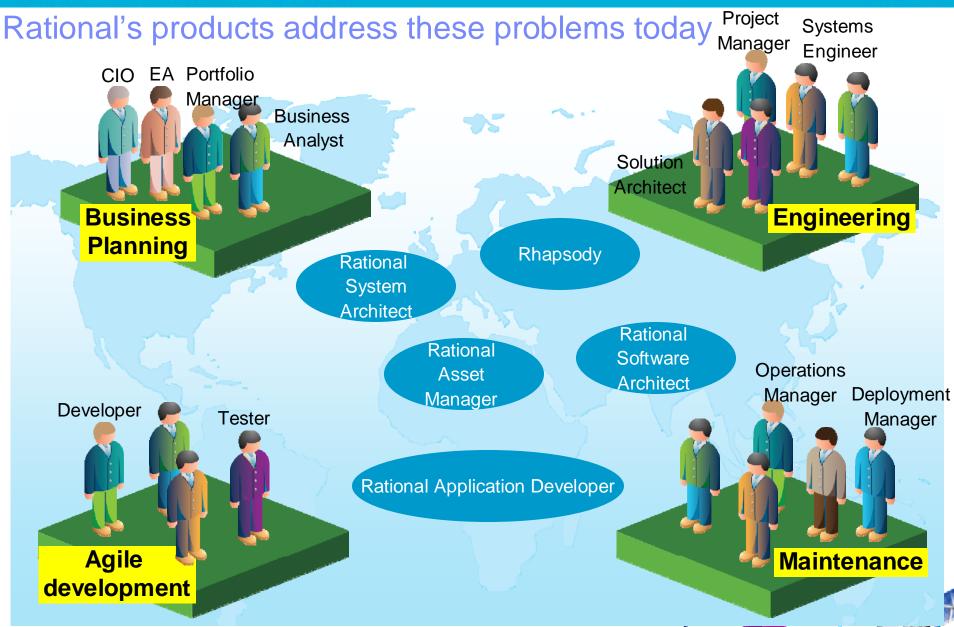

Operations

Deployment Manager

Manager

Maintenance

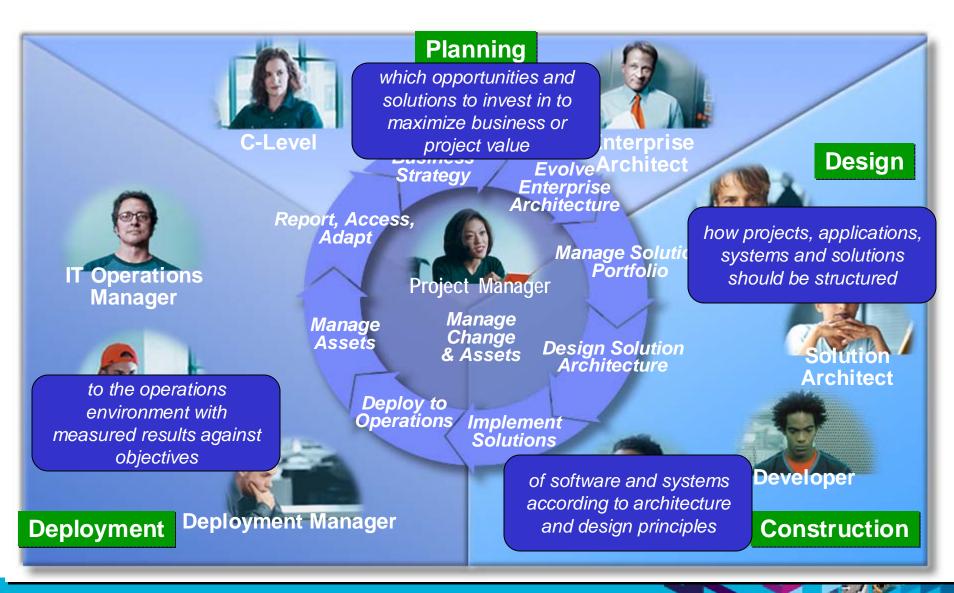

Where do I start? How can I grow to a larger scope of solution?

Organizing starting points around disciplines

Portfolio evolution guiding principles

Architecture Management

Rational's Architecture Management strategy takes the <u>core disciplines</u> of <u>enterprise architecture</u> and <u>model-based design & development</u> and <u>integrates</u> them with the management services of <u>asset management</u> & <u>lifecycle management</u> to create a more <u>collaborative</u> approach to <u>creating and managing</u> the architecture for software applications & systems

Architecture Management value to customers:

- ✓ Improves communication, integration and governance across the stakeholder community.
- ✓ Better aligns business objectives & strategy with workbench implementation & deployment
- ✓ Faster time-to-value and overall cost savings

Architecture Management

Governance and reuse of architecture, design and implementation assets

Strategic Planning

Solution Design

Solution Construction

Solution **Deployment**

Align portfolio investments with business priorities and customer needs

Understand the structure and behavior for systems and software solutions

Implementing the systems and software

Automating solution delivery & operations management

Application Lifecycle Management

Enact and govern process, change, build and release management

A vision for supporting Architecture Management in the future

Asset Management

- Organize, categorize, describe and manage enterprise assets
- Reuse, repurpose and remanufacture of business and software assets
- Automated workflow for approval, publish and audit

Strategic Planning

Solution Design

Solution Construction

Solution **Deployment**

- **Business motivation &** strategy
- **Business Architecture**
- Application, Data, Service Architecture
- **Technical Architecture**
- Opportunity and Solution **Analysis**
- **Project Portfolio** Management

- **Business Motivation &** Strategy
- **Project Definition**
- **System Context**
- Use Case Model
- Component, Service & **Operational Model**
- **Architectural Decisions**
- Viability Assessment

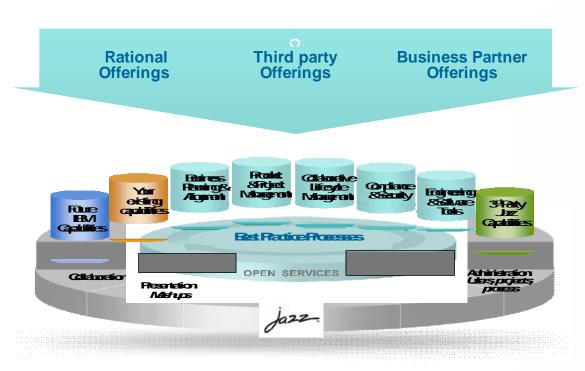

- Service Identification. specification & realization
- Model Driven Development
- Process and service Portfolio Mat
- JEE, Web 2.0,
- **Product Line** Engineering
- Systems Modeling

- Technical Architecture
- **Operations Modeling**
- Logical and physical deployment model
- Deployment provisioning and automation
- Operations management
- CCMDB

"Collaborative Application Lifecycle Management" Rational Software and Systems Delivery Platform powered by Jazz

Jazz is a platform for transforming software delivery

Jazz is a platform for transforming how people work together to deliver greater value and performance from their software investments.

Jazz is...

- Our vision of the future of systems and software delivery
- A scalable, extensible team collaboration platform
- An integration architecture enabling mashups and non-Jazz products to participate
- A community at Jazz.net where Jazz products are built
- An evolution of our portfolio over time

Building on the Foundation

Extending Jazz for supporting Architecture Management
