An Exceptional Web Experience...

Generates strong customer loyalty

Has a wow factor

Is adaptable to changing markets

First Impression of your business lends credibility

All built on a technology foundation you can trust

Our customers are telling us they need to...

Build brand, revenue,
and customer satisfaction
using online properties

Drive higher value
customer interactions
via lower cost channels

Increase business
responsiveness
by consolidating sites

WebSphere Portal: Key value propositions and capabilities

User Expectation & Appeal

- **Integration of Web 2.0 features** for a richer, more responsive, and modern user interface
- **Full personalization of user experience**
- **Recommendation engine for cross-selling and customer monitoring**
- **Multi language**, disability access
- **Universal access** (PCs, Mobile phones, TV) for new entry points to service and access

Speed to Market & Reduced Costs

- Component based model for **faster development, re-use, and cost effective deployment**
- **Parallel development** of service and application components
- Shared 'plumbing' code so more time **spend creating business function not reinventing**
- **Powerful customization** capabilities to change look & feel of website **without coding**

Flexibility & Agility

- Flexible **integration of 3rd party content and applications**
- Give **LOB and business users control over their website content and processes** while maintaining IT control over standards and best practices
- **Separation of content from presentation**
- Increased **content re-use and reconfiguration** vs hard coding
- **Easy integration** of web content management and On-line Forms capabilities
- Support for **leading portal standards** to maximize **reuse and investment protection**

Performance & Scalability

- A set of **best practices on building web platforms**, developed and **refined over 6 years** by industry leading portal platform vendor
- Proven to **scale for large numbers** of customers and users
- **Extendable** to other enterprise portal environments

Agenda

- Exceptional Web Experience Overview
- Rational Application Developer Portal Tool Kit Overview
- Demonstration of Rational Application Developer Portal Tool Kit
- Question and Answer Session

Reality Check: How will you solve the Web Application development challenges impacting your business

Developer

Deliver successful scalable solutions that exceed expectations

How can you quickly deliver code that works, scales easily, and integrates faster?

How do you automate coding and testing tasks so you can focus on the creative solution-building aspect of development?

How do you collaborate with geographically diverse teams and ensure best practices are followed?

How do you make use of emerging technologies to deliver cutting-edge applications when you don't have time to learn?

Deliver solutions on time, under budget while managing risk

Development Manager

How can you reduce risk, and deliver solutions on time, exceeding business expectations under budget?

How do you remove roadblocks to organizing geographically diverse teams and enable better tracking of the project?

Project Manager

Portal and Portlet development and delivery challenges in times of innovation and constant change

*"Only **34%** of software projects are deemed successful costing over \$300B annually"*

*"Only **37%** are satisfied with the speed of software development"*

*"**50%** of outsourced projects are expected to under perform"*

*"Only **42%** of users are satisfied with quality"*

Silos of people, process, and projects

Geographic Barriers

- Poor communication
- Language, culture, time
- Process gaps resulting in rework
- High degree of friction

Organizational Barriers

- Lack of meaningful collaboration
- Weak project governance
- Lack of domain expertise
- Poor LOB oversight
- Security of IP when outsourcing

Infrastructure Barriers

- Incompatible tools / repositories
- Unreliable access artifacts
- Lengthy on-boarding
- Inflexible tooling integration

PTK helps with Agile Portal Development

Facilitates the principles of high-performance teams

Simplification of complex implementations

PTK increases efficiency and shortens the development and test cycle

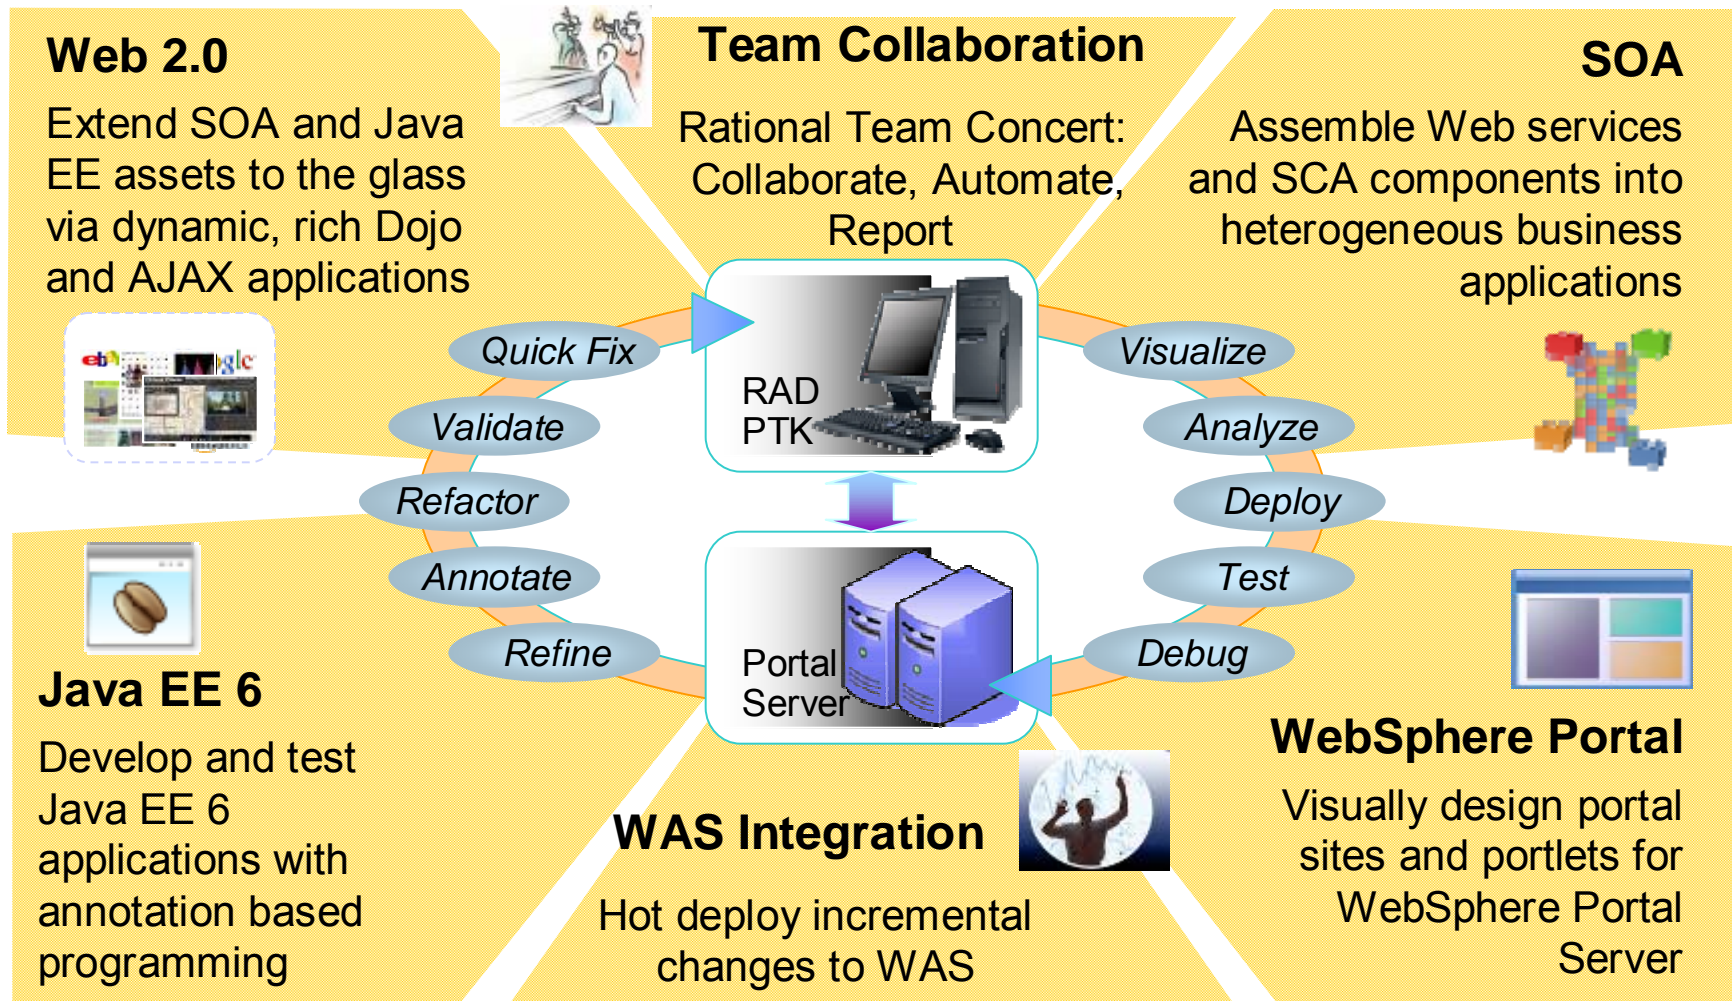

- Wizards, visual design tools and assistive source level tools, get you to your first iteration, faster
- Integrated test and debug capabilities let you unit test every step of the way

- RTC integration
 - Collaborative Debug
- Automated static code analysis
- Process awareness

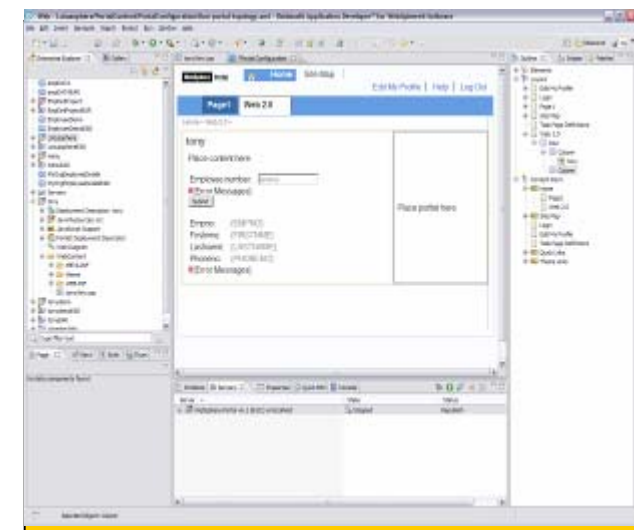

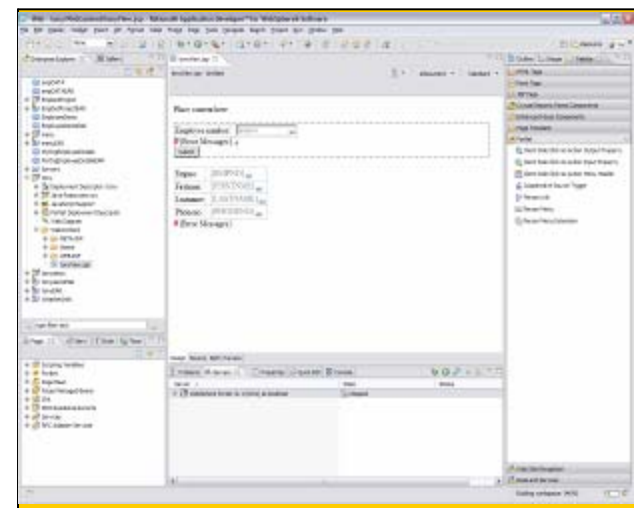

- Iterative development support
- Comprehensive refactoring,

Portal Tool Kit Accelerates Portal Development

Rational Application Developer Portal Tools Makes it Easy!

- Automation and auto-code-generation to reduce time to market and learning curve
- Optimized and fully tested code generated according to prescribed standards and best practices
- Improved productivity that enables developers to focus on writing custom business logic
- Seamless integration with other J2EE actors like EJB, JPA, web services etc.
- Portlet generation wizards
- Rich and functional UI components easily integrated into Portlets
- Easy local testing via integrated Portal test server environment
- Has powerful software analysis and reporting capabilities that extend capabilities across architecture, data flow, software metrics and code analysis
- Integration with other IBM products
 - WebSphere Portlet Factory
 - Lotus Forms Designer
 - Rational Automation Framework
 - Rational Team Concert and Many More...

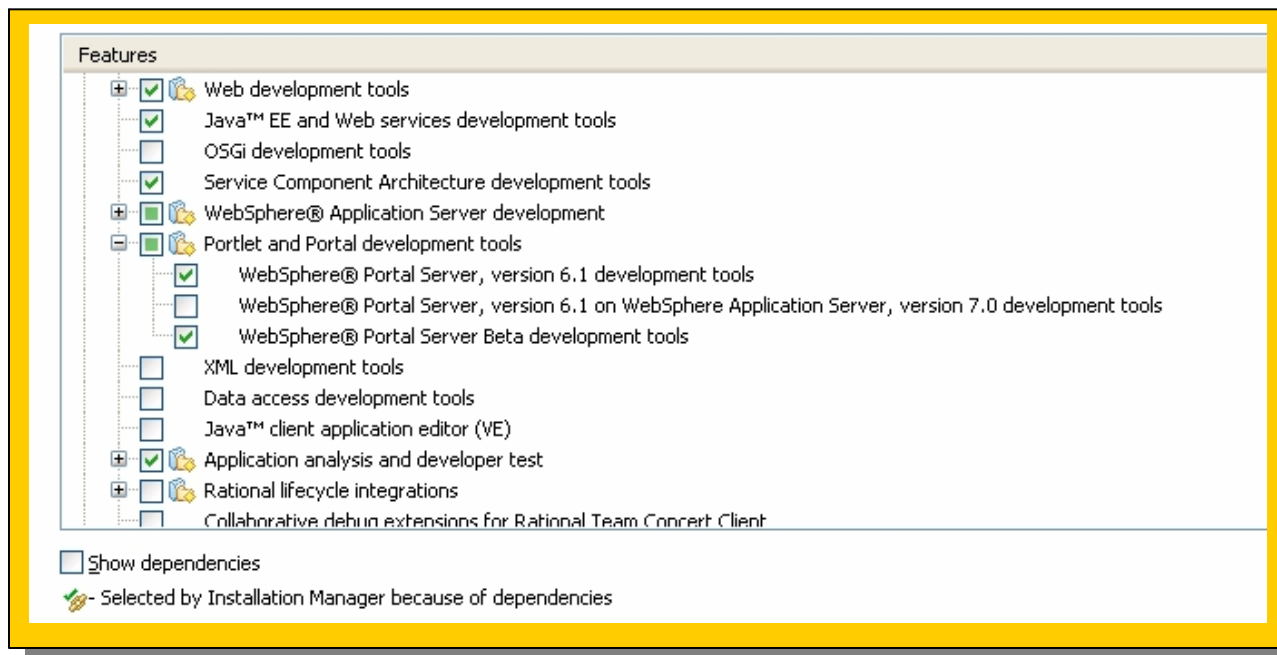

Rational Application Developer Portal Tools Kit

- Support for WebSphere Portal V 7
- Client Side Aggregation 2.0
- Developer Experience Enhancements
- PTK Usability Improvements
 - Portal run-time segregation for WAS/WID
- JSF Best Practices & Performance study
- JPA enabled portlets
- JAX-WS for Portal V7
- Eclipse 3.6
 - Upgrade in place
 - Clean Install
- Additional Enhancements to PTK Web 2.0 Features
- PTK - Portal Dojo Library (dijit support)
 - Easily build compelling, highly interactive portlets
 - Create client-side charts and graphics
- PTK - iWidget Support (v1.1, v2.0)
 - Creation wizard
 - Consume iWidgets and static pages in portal
 - Publish iWidgets and Pages to Portal
 - Test using Mashup enabler v2.0
- PTK – Portal Site Designer Tool
 - Manage layout and content of your Portal site from within RAD
 - Faster than ever preview of Portlets and iWidgets

The information on the new product is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information on the new product is for informational purposes only and may not be incorporated into any contract. The information on the new product is not a commitment, promise, or legal obligation to deliver any material, code or functionality. The development, release, and timing of any features or functionality described for our products remains at our sole discretion.

RAD PTK Flexible Install Options

- Install only the Portal version that's required;
- **Advantage:** reduced hard disk footprint (by ~300MBs)
- Ability to shell share with other Eclipse based products which helps developers manage the life cycle of their applications on their desktop
- Download & footprint improvements for the WebSphere test environment

Flexible Documentation Installation

Common Configurations

Help System

Remote help for "IBM® Rational® Application Developer for WebSphere® Software" is available and is enabled by default. You can use remote help to dynamically retrieve the latest product documentation from the Web. If you work offline, you can download the help that you need into your local help system. You can also connect to a help system that is set up on your intranet server. If you install packages that do not use remote help, the documentation for those packages is installed on your computer.

After the installation, you can change how you access help by using the help preferences option in the product.

- Access help from the Web
- Download help and access the content locally. Only limited help content is included during installation. When you first start the product, the complete online help is downloaded and installed provided that you have an Internet connection. On subsequent startups, available updates to the help are downloaded and installed.
- Access help from a server on your intranet

Host:

Port:

Path:

- Various install options to manage your desktop configuration better
- Can be installed on a Enterprise wide common infrastructure
- **Advantage:**
 - Available on internet – regular updates
 - Reduced hard disk footprint

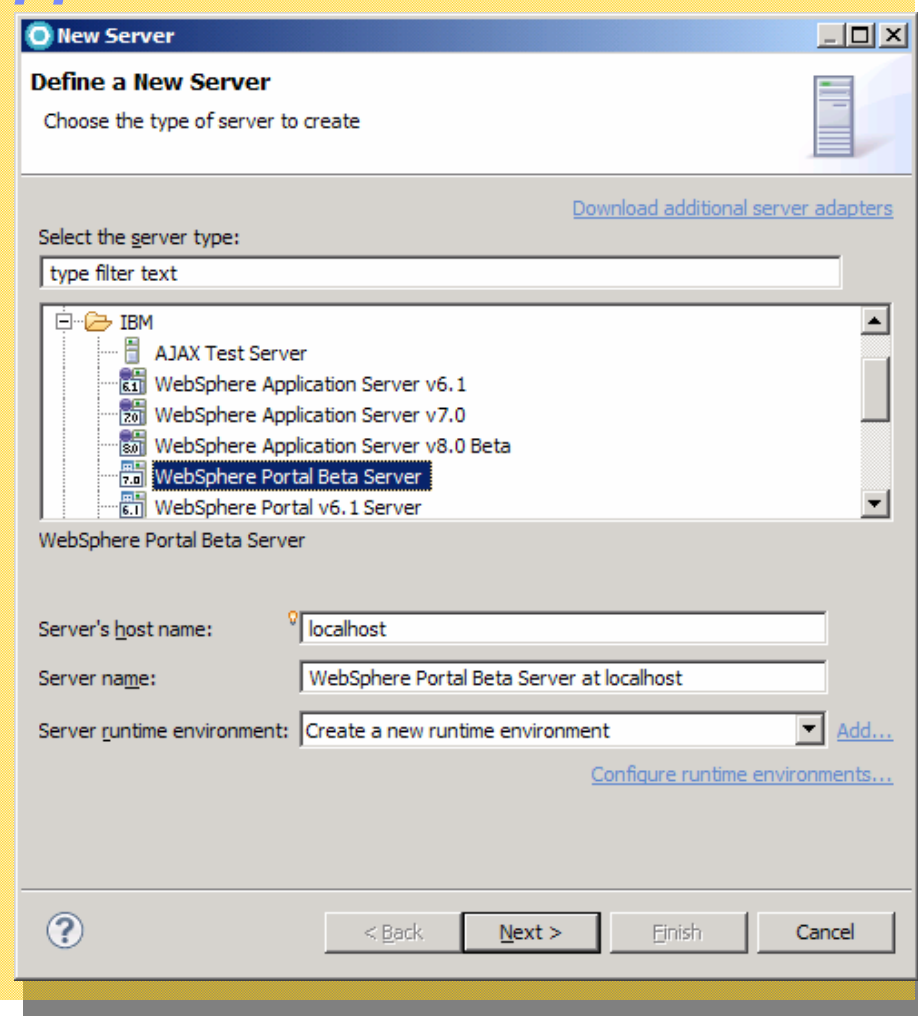

Automate Portal/Portlet Development with integrated WebSphere Portal Environments

- *WebSphere Portal Server 6.1.x, 6.1.5 and 7*
 - Integrated Portlet support for JSF, Struts framework, Portlet templates and layout
- Remote deployment to all WebSphere Portal and App. Server platforms above
- Remote publishing support for public and private clouds
- Incremental publish saves deployment time by an average of 80%
- Integrated debugging, menu items for admin console, ability launch WSADMIN, application client launcher
- Remote and Local Portal test client and Stubs to dynamically test your applications

The information on the new product is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information on the new product is for informational purposes only and may not be incorporated into any contract. The information on the new product is not a commitment, promise, or legal obligation to deliver any material, code or functionality. The development, release, and timing of any features or functionality described for our products remains at our sole discretion.

WebSphere Portal Server 7 Support

- WP 7 Server Support
 - Updated Wizard Steps
 - Ability to test connection with credentials
 - Updates to Server configuration editor to help manage deployment option local to Rational Application Developer
 - ✓ Portlet Settings
 - ✓ Publishing options
- WP V7 Stubs Support
 - contain all jars necessary for compilation of a JSR286, JAX-WS, and other portal features portal/portlet project
- Workspace migration from Rational Application Developer v6.1, v7 and v7.5.x to v8

The information on the new product is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information on the new product is for informational purposes only and may not be incorporated into any contract. The information on the new product is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Modify Portlet Project Web 2.0 Features

Web 2.0 Features

Specify Web 2.0 features to be installed in the new portlet project

Ajax proxy

Client-side capabilities

Dojo toolkit

RPC adapter

? OK Cancel

RAD Portal Toolkit is all about Web 2.0 features

- Web 2.0 Dojo tooling support
- Client Side Click-to-Action
- Insertion of Person Menu and the capability to extend the Person Menu
- Client Side Programming Model for retrieving portlet preferences in Basic portlet projects
- Enabling Ajax proxy for portlet applications
- Tooling support for Static Page Aggregation (SPA)
- Customize Web 2.0 themes of WP 6.1
- Multiple options to create ReST services

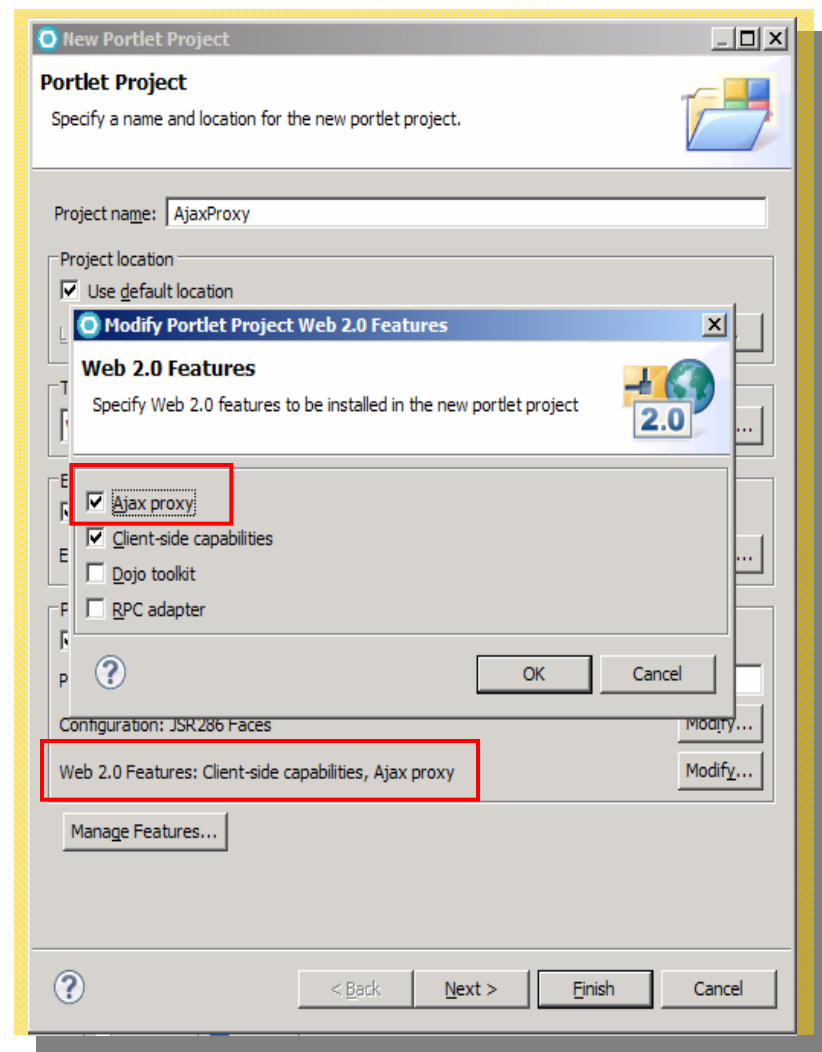

Ajax Portlet Development

- Portal 6.1 introduces several new capabilities to make AJAX development in portlets much easier.
- Ajax Proxy
- JWL widgets
- Supports cross-domain requests
- Easily administered
- JSR 286 Portlet support
- Adds ResourceRequests for retrieving Portlet resources without the full Portal aggregation
- Navigational State can not be altered
- Client Side Programming Model support
- Adds easy to use APIs for accessing portlet preferences and maintaining navigational state on the client

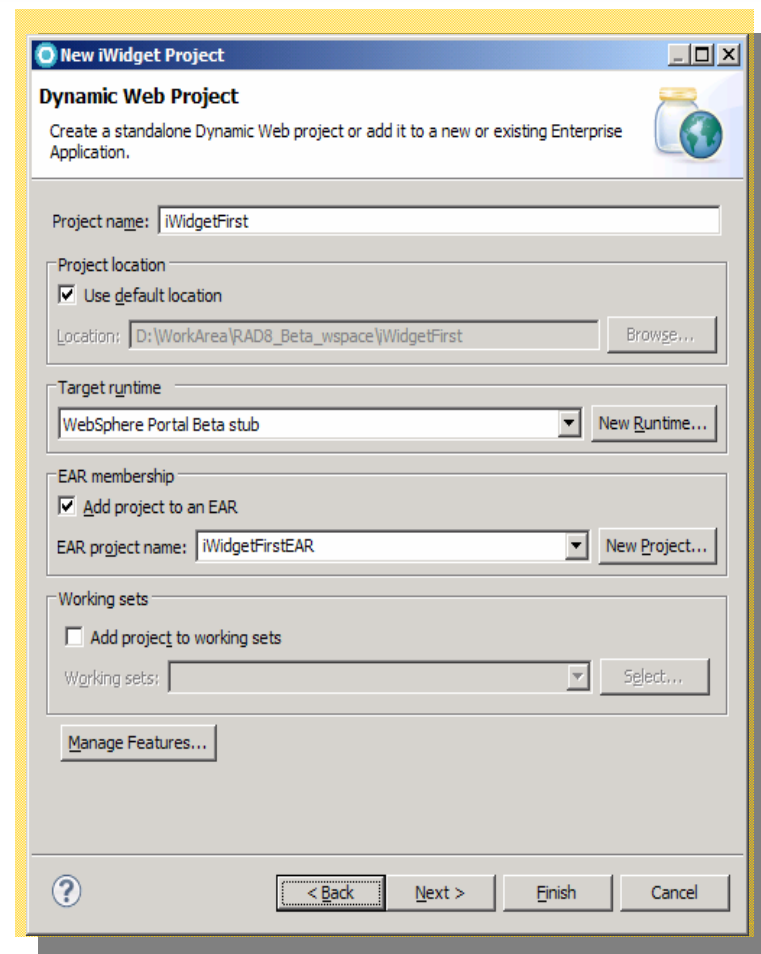

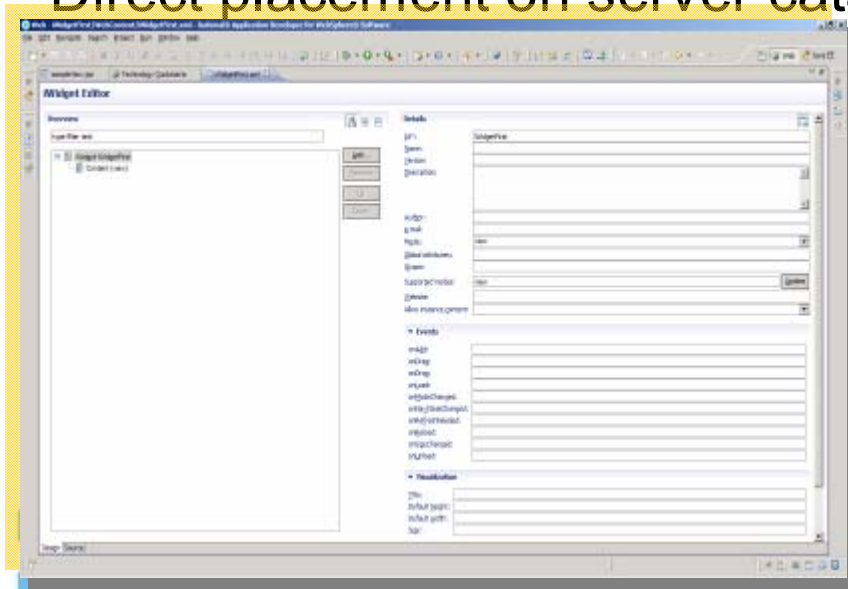

Ajax Proxy Support

- Can be enabled for existing or a new portlet project.
- Facet for Ajax Proxy
- Registers ProxyServlet in web.xml.
- Automatically creates proxy-config.xml under WEB-INF
- WYSIWYG editor (Ajax Proxy Configuration Editor) to edit the Ajax config
- One can specify paths that maps to a URL on a remote domain

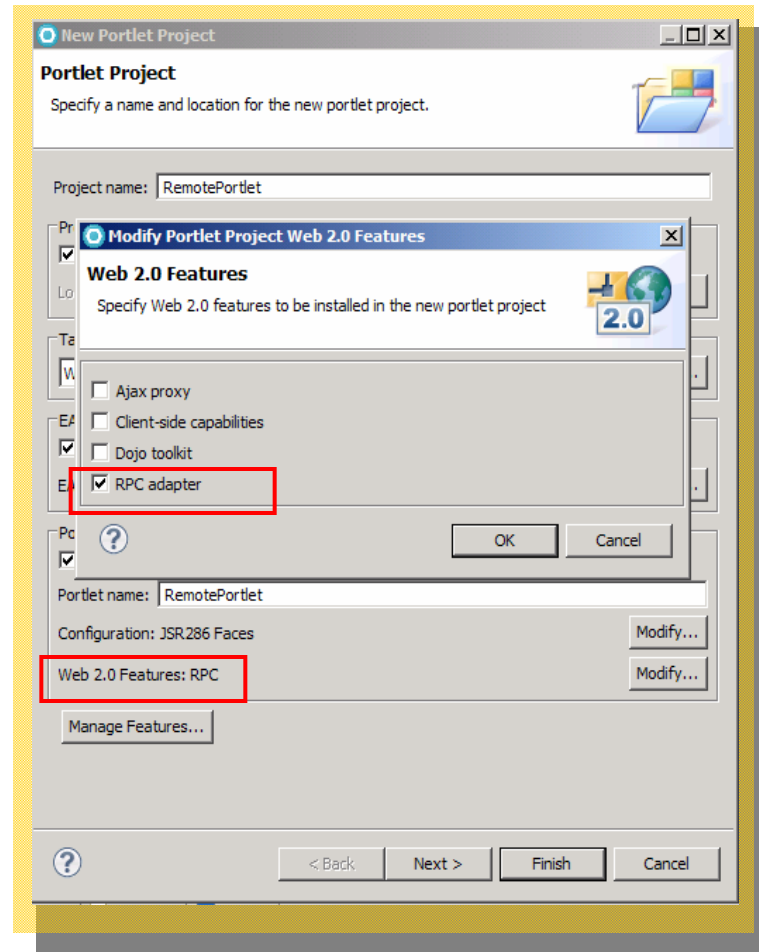

iWidget Support

- Create an iWidget with few clicks
- Option to create
 - Event emitting iWidget
 - Event consuming iWidget
- WYSIWYG editor for iWidget XML
- Deployment tools
- Direct placement on server catalog

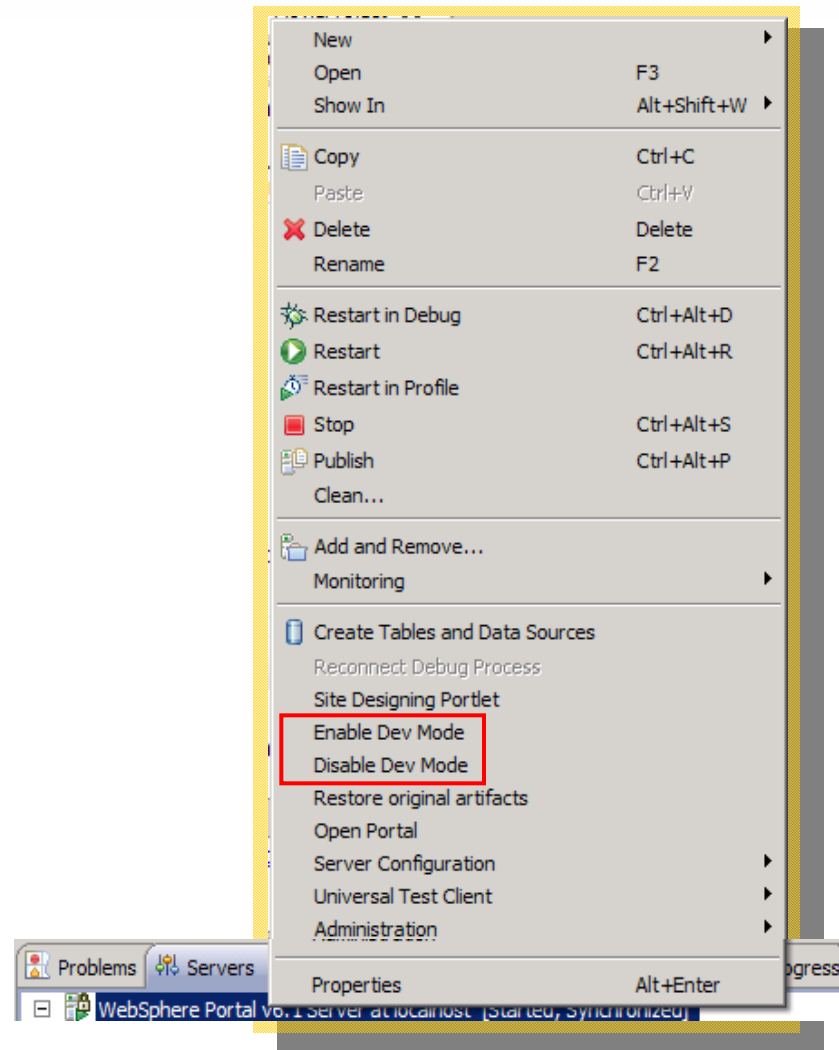

Remote Procedural Call

- A handy way of exposing any server side code as ReST service that enables Web20 portal application creation
- Single click invocation of wizards that takes away all your coding worries - no coding required, no testing of generated code required
- Exposes your POJOs, session beans methods to be directly callable from JavaScript or client side code
- Very intuitive and simple access to direct URLs of methods exposed
- URLs generated as per portlet specifications for applications targeting Portal

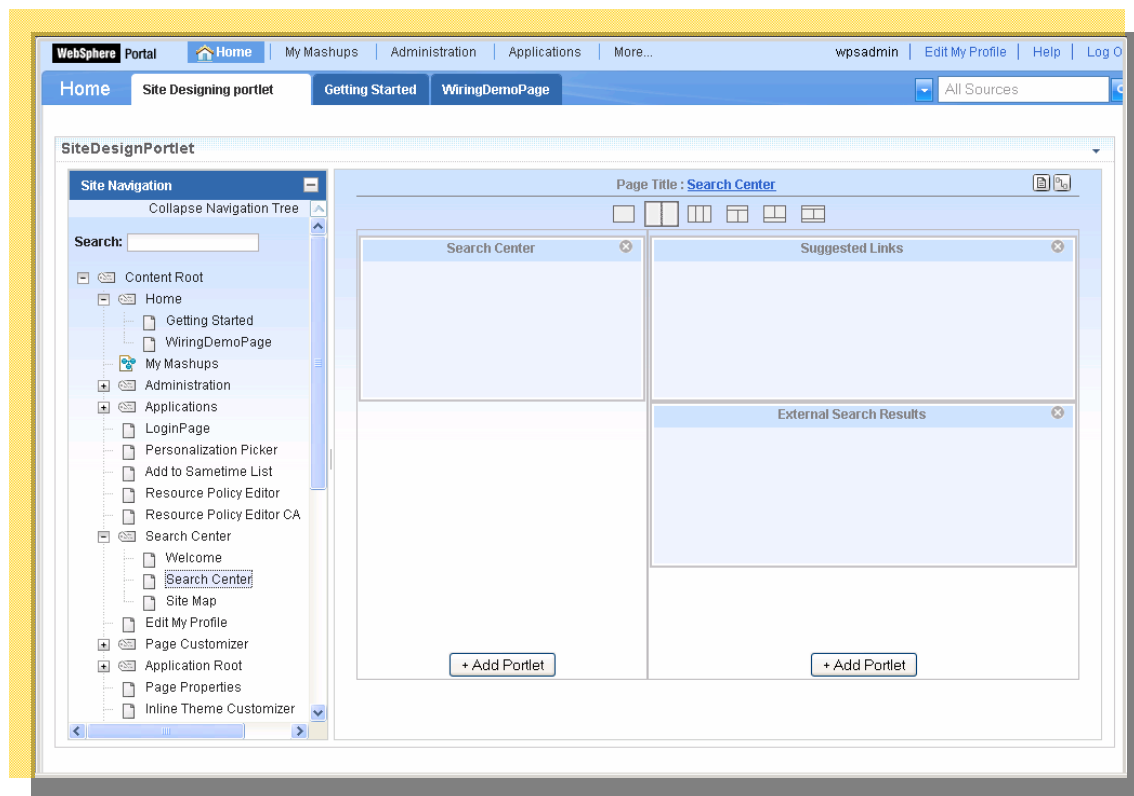

Portal Development Mode

- ConfigEngine.bat enable-develop-mode-startup-performance
- For development purpose
- Reduces portal start up time
- JVM is optimized for development
- One click
 - Activation
 - Deactivation
- No need to remember various portal config params
- Less chance of human error

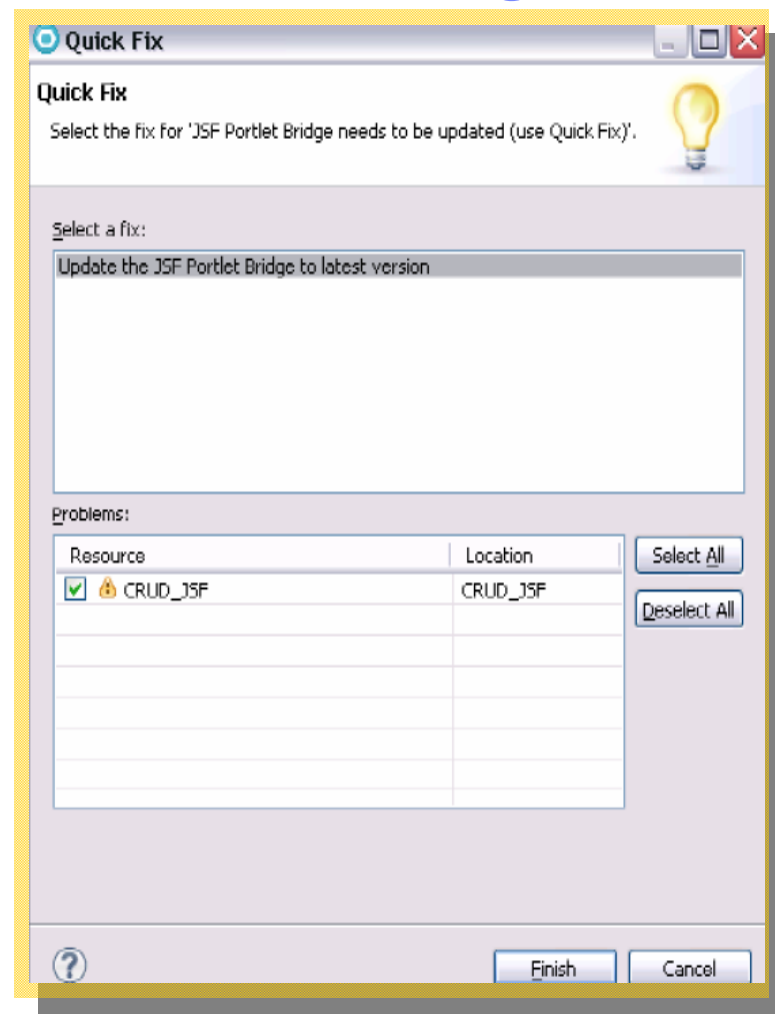

Site Designing Portlet Tool

- Light Weight
- Desktop like compelling usage
- Web2.0 Ajaxified interface
- Universal Catalog
- Portlet Design View
 - Page Navigation
 - Site Designing

Rational Application Developer JSF Portlet Bridge improvements

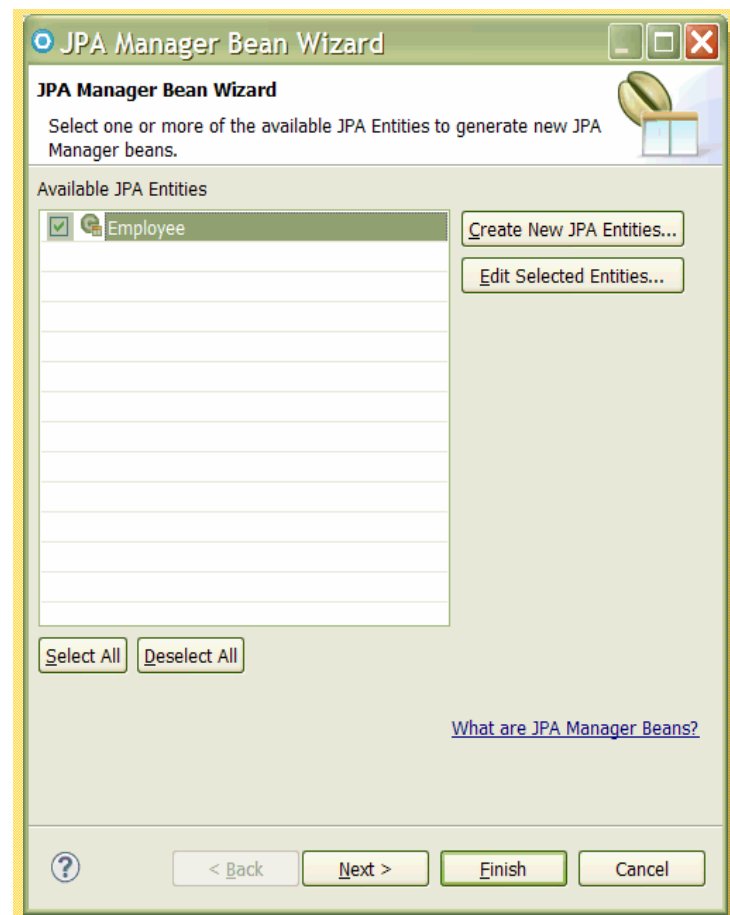

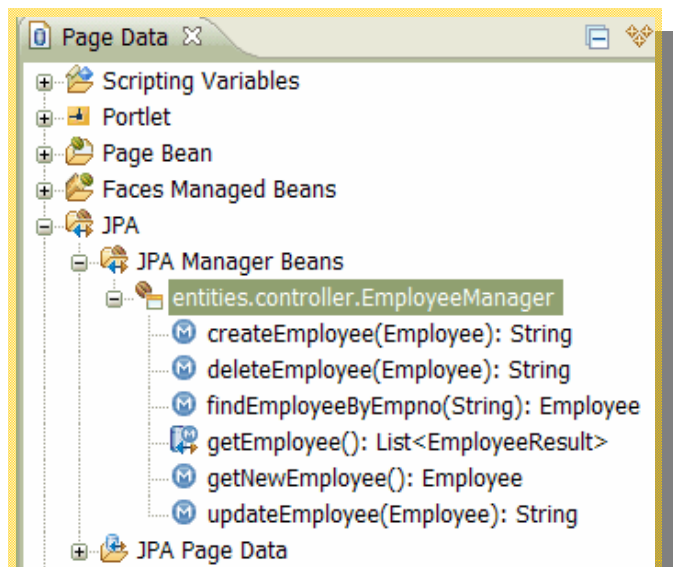

- The IBM JSF portlet bridge supports JSR 168 Faces Portlet applications based on JSF 1.2
- Automatic update of the JSF portlet bridge when a JSF Portlet Project is migrated from IBM Rational Application Developer V7.0.0.x to RAD V8
- In case of migration of JSF Portlet projects from IBM Rational Application Developer V7.5.x to RAD V8 quick fix option to update the JSF portlet bridge.

The information on the new product is intended to outline our general product direction and it should not be relied on in making a purchasing decision. JPA Support for Portlet Projects

- Wizards to create
 - Entities from DB
 - JPA Manager Bean
 - Query Method
- Page Data View
 - Tree structure to represent the Entity
 - Auto generation of UI elements

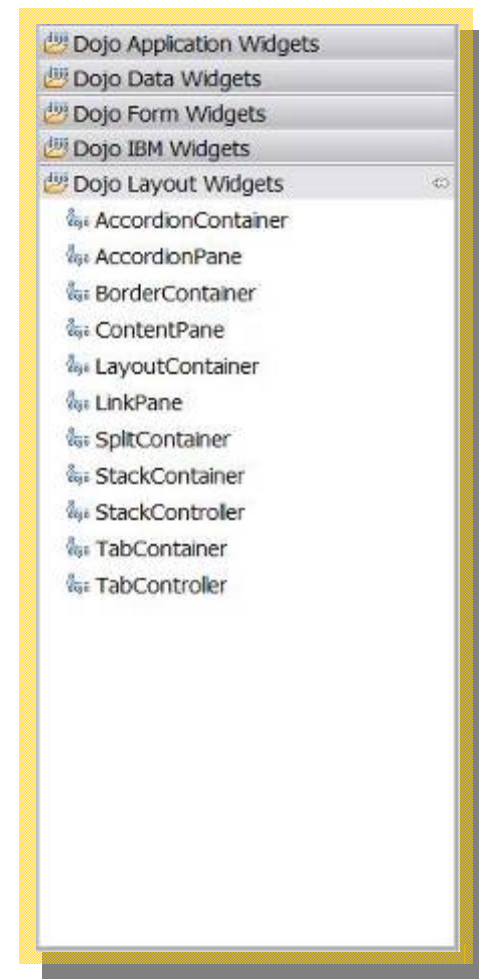

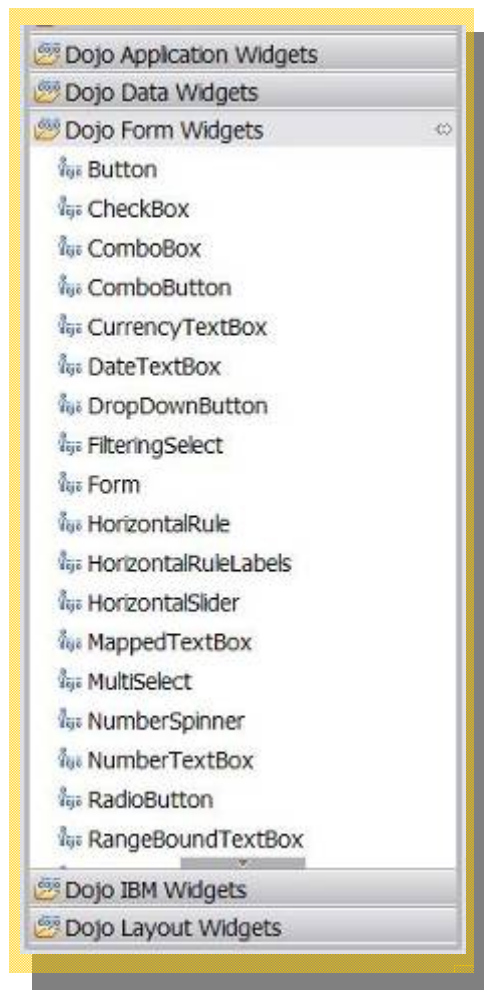

Dojo support

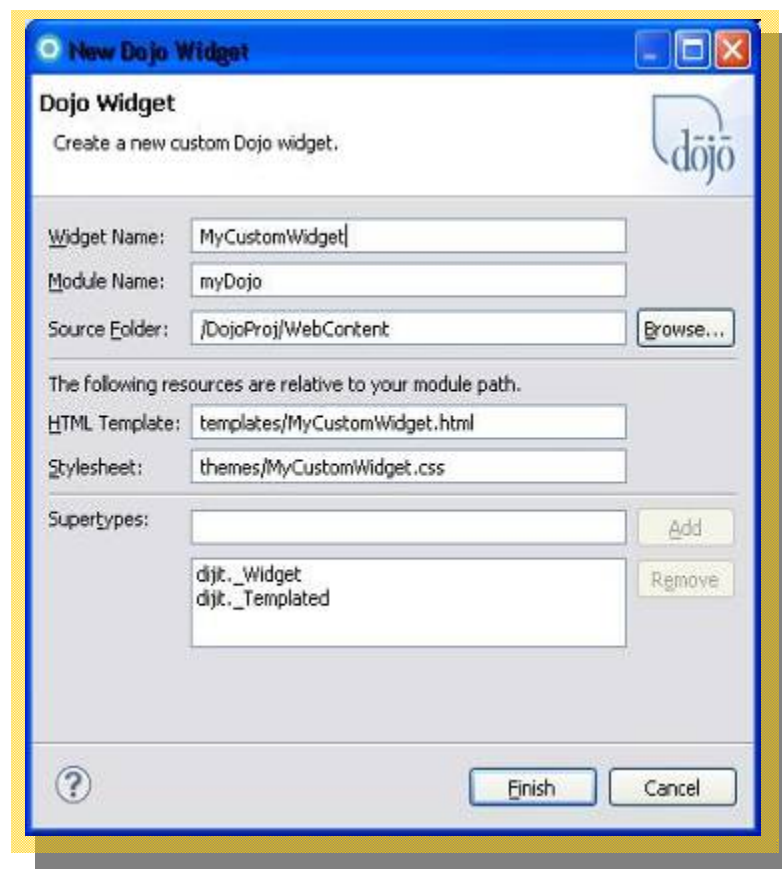

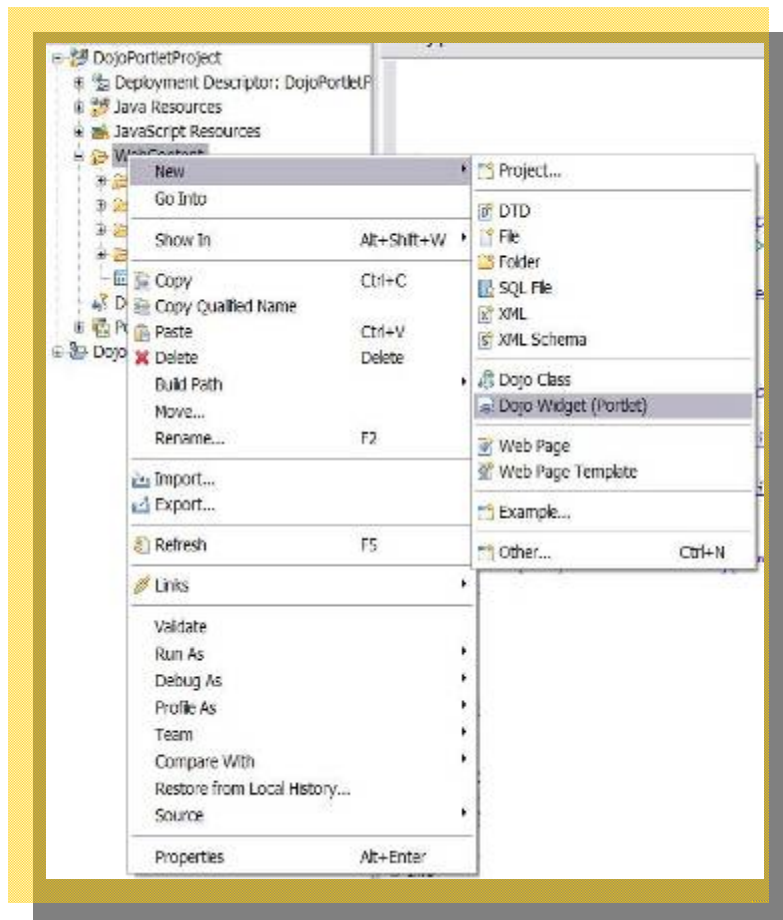

- Rational Application Developer allows to configure and use various versions of Dojo library.
- Solves challenges for Dojo development on Portal
- Incorporates best practices for Dojo and JavaScript

■ *Out of the box Dojo Widgets in Palette*

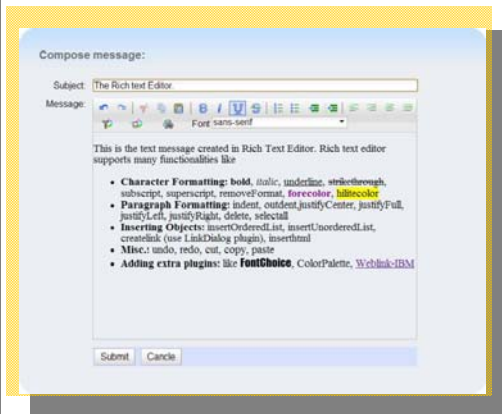

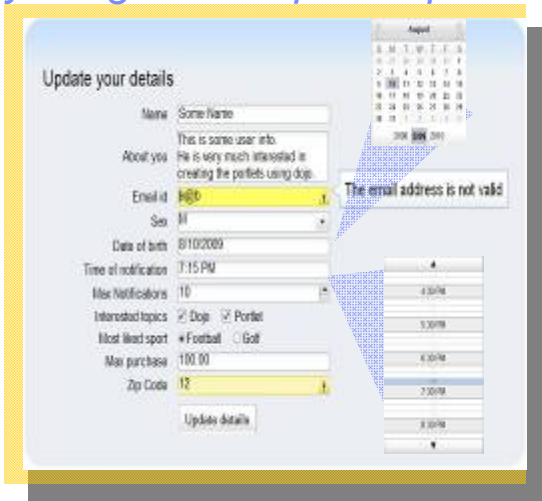

Wizards to create custom dojo widgets

Deliver Exceptional User Interfaces with Dojo Widgets

Easily Drag and Drop from palette any Widget to create exceptional web experiences

Deliver Exceptional Web Interfaces with Dojo Widgets in RAD Portal Toolkit v8

Platforms Supported by Rational Application Developer

▪ **Linux®:**

- Red Hat Enterprise Linux Version 4.0 AS / ES (x32 / x64)
- Red Hat Enterprise Linux Version 5.0 AS / ES (x32 / x64)
- Red Hat Enterprise Linux Desktop Version 4.0 (x32)
- Red Hat Enterprise Linux Desktop Version 5.0 (x32)
- SUSE Linux Enterprise Server (SLES) Version 9 (x32 / x64)
- SUSE Linux Enterprise Server (SLES) Version 10 (x32 / x64)
- SUSE Linux Enterprise Desktop (SLED) 9 (x32)
- SUSE Linux Enterprise Desktop (SLED) 10(x32)

▪ **Microsoft® Windows®:**

- Windows Server 2003
- Windows XP
- Windows Vista Business/Enterprise
- Windows Server 2008

Application Server Test Environment:

- IBM WebSphere Application Server Unit Test Environment v6.0, v6.1, v7.0
- WebSphere Portal Server V6.1 (also compatible with v6.0 but not included)
- Supports WebSphere Feature Packs: Web 2.0, Web Services, EJB 3.0

Hardware:

- Display, minimum requirements: 1024 x 768
- 1GB RAM minimum; 2 GB RAM works well
- Disk space requirements: 3.5 GB minimum for installing Rational Application Developer and additional disk space for development resources (minimum disk space can be reduced if optional features and run times are not installed).
- Linux only supported on x86 architecture
- Intel® Pentium® III 800 MHz or higher recommended

Additional reasons why to use Rational Application Developer Portal Tools Kit?

- IBM Rational Application Developer (RAD) is the most complete Java and Web IDE on the market.
- Rational Application Developer's integrated set of Eclipse-based tools and best practices, as well as its local presence and expertise worldwide, minimizes development risks and maximizes return on investment.
- By teaming directly with the WebSphere Application Server and WebSphere Portal Server teams Rational Application Developer provides industry leading capabilities for both runtimes.
- Rational Application Developer can be extended using both third party Eclipse plug-ins as well as Rational specific plug-ins provided by IBM and its partners.
- Rational Application Developer provides a reliable, robust and customizable set of tools, the IBM Software Development Platform, which is built on top of Eclipse .
- Rational Application Developer integrates with various Rational solutions including Rational Team Concert, which transforms Rational Application Developer into a collaborative JEE development environment which such capabilities as “Collaborative Debugging”
- Rational Application Developer leverages the IBM Installation Manager which provides enterprise-wide deployment capability for your organization.
- **The standard ECLIPSE Vs RAD PTK customer objection**
- *Most Common Customer Question:* I already have Eclipse for my Java coding – what more do I need?
- *My Response:* If you're doing JEE development, your developers are spending a lot of time dealing with low-level infrastructure tasks such as directly editing the deployment descriptors, manually creating the mapping descriptors, writing code to test EJBs and more.
- Rational Application Developer adds a wealth of productivity features for the J2EE and Portal/Portlet developer over and above the base Eclipse platform.

JSR-286 Support

- Creation of JSR 286 Portlet Project:
- Support for Portlet Events: JSR 286 allows the Portlets to declare events it wants to publish (send), and events it wants to process (receive).
- Support for Resource Serving: JSR 286 allows Portlets to serve resources.
- The resources here may be images, jsps and so on. The Portlet can serve resource using resource URLs. Using Rational Application Developer one can configure Resource Serving feature.

Support for Client Side Programming model

- One click to enable Web 2.0 functionality
- Improves performance
- Reduces repeated round trips to server
- No Flicker
- Leverages you system processing power
- User actions in the browser cause JavaScript to execute
- Script communicates directly with the server
 - XmlHttpRequest or hidden IFRAME
- Server replies
 - Data: text, JSON, XML, etc.
 - HTML fragment
 - JavaScript in the page interprets this reply and uses it to update one or more page areas

Client Side Click-to-Action

- One of the mechanisms by which portlets can interact and share information among each other
- Earlier available only for IBM APIs
- With WP 6.1 its available for JSR 168 and JSR 286 APIs as well
- Defined by semantic tags
- Source provides data relevant for other components on the page
- This data item has associated type name that determines the targets
- Targets provide handlers for this data, either as JavaScript or as a server side URL
- All components that contribute HTML to a page can be a source or a target

Insert Client Side Click-to-Action Input Property

To receive data from another portlet describe the type of data this portlet can accept.

Describe the Type of Data Being Received

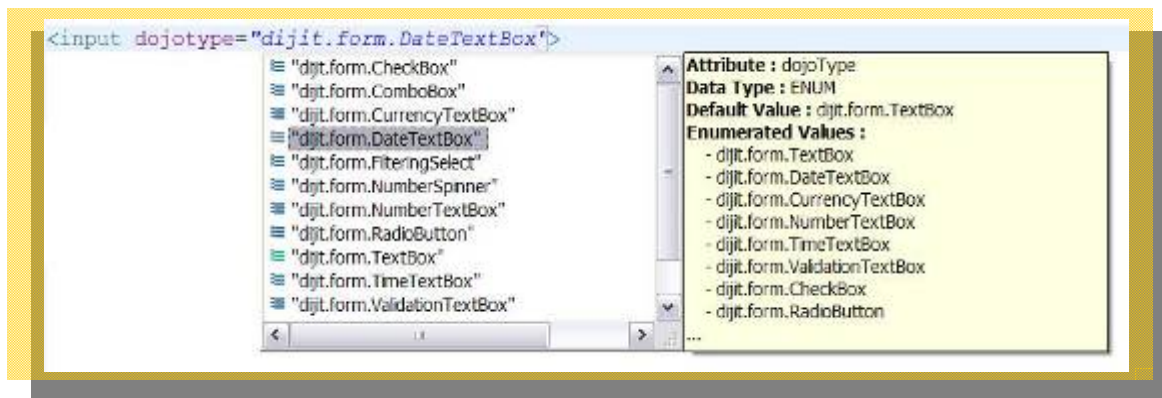

Enter a URI that uniquely identifies the target data type. This portlet can receive data from a source portlet that describes an identical data type.

Data Type URI:

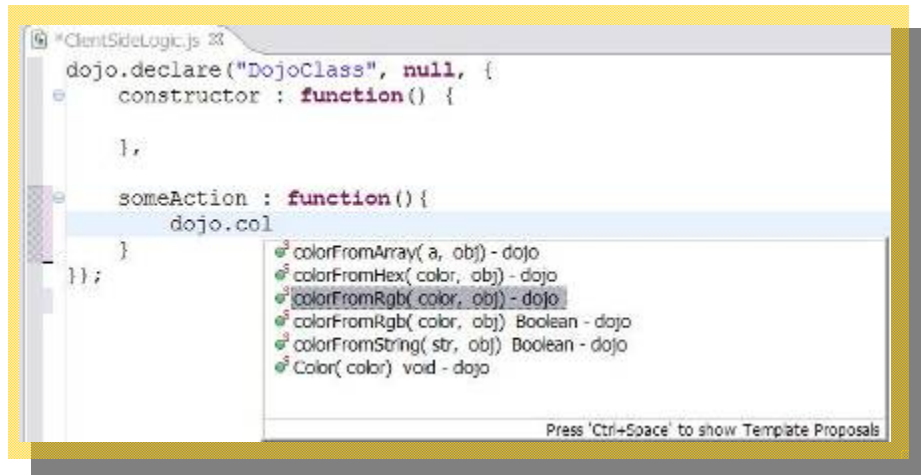

Example: http://namespace#datatype

< Back Next > Finish Cancel

■ Dojo content assist in JSP

■ Dojo content assist in JavaScript

Dojo widgets Properties View

The screenshot shows an IDE window with the following content:

```

<select dojoType="dijit.form.FilteringSelect" name="select2"
  autocomplete="false" value="Val1"
  id="filteringSelect_<portlet:namespace/>" disabled="disabled"
  class="filteringSelectClass">
  <option value="Val1" selected="selected">Value1</option>
  <option value="Val2">Value2</option>
</select>
    
```

Below the code editor, the Properties View is displayed. The left sidebar shows a tree view with the following structure:

- #document
- div
- div
- select
- Styles

The main area shows the 'Attributes' table for the selected 'select' widget:

Attribute name	Value
autocomplete	false
class	filteringSelectClass
dir	
disabled	disabled
dojoType	dijit.form.FilteringSelect
id	dijit.form.FilteringSelect
item	dijit.Tree
lang	dijit.layout.AccordionContainer
multiple	dojox.layout.ExpandoPane
name	dojox.widget.gauge.BarLineIndicator
onblur	
onchange	
onclick	

Display Tabular Data in Feature-Rich Dojo Grid

- Automatically provides column sorting and resizing, alternate row shading and event support

Automatically Enables Click to Sort Columns

Drag to Change Column Display Order or Width

Double Click to Fire Application Event

Automatically Applies Alternate Row Shading

Modify Grid Content with Advanced Formatting (i.e. add links, date/number formatting etc.)

Return Search Results in Real-Time with Dojo Type-Ahead Search

- Improved type ahead search functionality generates tabular results user interface automatically

Enter Search Criteria

Displays Results Matching Criteria in Real-Time

Automatically Generates Search Results UI

Create a Custom Results UI for Advanced Layouts

Name	Location	Title	Photo
Lucille Suarez	Denver	Senior Consultant	
Steve Williams	Chicago	Engineer	
Samantha Daryn	Cambridge	Engineer	
Suzanne Miles	Durham	Engineer	

Create Sophisticated Web 2.0 Style User Interfaces

- Easily deliver polished, nuanced User Interfaces with depth and complexity including rounded corners and drop shadows

Rich UI Employee Details

A screenshot of a web application showing an employee details card. The card has rounded corners and a drop shadow. It features a photo of a woman with glasses, the name 'Minh Li', and a list of attributes: Title (Engineer), Location (New York), ID (EMP981045), Extension (75797), and Email (li981045).

Title	Engineer
Location	New York
ID	EMP981045
Extension	75797
Email	li981045

Create UIs with Rounded Corners and Drop Shadows

Deliver Exceptional User Interfaces with Dojo Widgets

- Easily create forms with advanced Dojo User Interface widgets including pickers, validators, formatters, spinners and drop down buttons

Highlights Selected Form Element

Click to Launch Date Picker

Click to Launch Time Picker

Click to Adjust Numeric Values

Formats Input as Currency, Numbers, Dates and Times

Highlights Validation Errors as User Types Email Addresses, Dates, Times and Numbers

Click to Display Options

The screenshot shows a web form with several fields and widgets. The fields include: ORDER_ID (008731), DESCRIPTION (This is a great order...), EMAIL (invalid email address), PASSWORD (masked), DATE_ORDERED (6/16/2009), STATUS (Shipped), DATE_SHIPPED (6/22/2009), TIME_SHIPPED (5:30 AM), AMOUNT (790.98), BILLING (1), SHIPPED (checked), STATE (New Hampshire), and ZIP (invalid zipcode). A context menu is open over the DESCRIPTION field, showing options like Edit, Cut, Copy, and Delete. A date picker is visible for the DATE_ORDERED field, and a time picker is visible for the TIME_SHIPPED field. A validation error message is shown below the ZIP field: "The value entered is not valid."

Edit Text Like Office Productivity Tools

Interactive Capture User Input Using Dojo Popup Dialog Boxes

- Popup Dojo dialog boxes and prompt the user for input, while disabling the triggering application

Click to Launch Popup Dialog

Popup Launches Modally Blocking Access to Triggering Application

The screenshot shows a web application interface with a table of orders and a modal dialog box. The table has columns: ORDER_ID, DATE_ORDERED, STATUS, DATE_SHIPPED, QUANTITY, AMOUNT, BILLING, SHIPPED, and STATE. The first row is selected. A modal dialog box titled "This is the title!" is open, displaying a form with the same fields as the table, each with a red asterisk indicating it is required. The form fields are filled with the data from the selected row. At the bottom of the dialog are "OK" and "Cancel" buttons. A callout points to the "OK" button with the text "Prompts User for Input".

ORDER_ID	DATE_ORDERED	STATUS	DATE_SHIPPED	QUANTITY	AMOUNT	BILLING	SHIPPED	STATE
