 $\bigcirc$ 

BEFORE

 $\bigcirc$ 

(i)

The site goes down and everyone gets into a room and yells at each other, "It's not me. It's you!"

An early warning message comes before the site goes down and avoids the outage completely.

 $\bigcirc$ 

A call comes in with an app issue and can be dealt with easily via mobile phone.

AFTER

FTER

## BEFORE

Thresholding learns the behavior of your systems and provides early warning alerts when it finds abnormalities.

 $\bigcirc$ 

Site malfunction causes total chaos. Triage control ensues.
