This collection of Adobe® Acrobat Portable Document Format (PDF) files is the library for MQSeries for Sun Solaris Version 5.1.

The books in this collection are listed under '[Library](#)'.

- Each book displays an expandable list of bookmarks. You can jump directly to any page in a book by clicking on its bookmark.
- Links within books are displayed in a blue box. You can click on these to jump to other parts of the document.
- Some books contain links to Web sites. If you click on a URL, your Web browser is invoked and the referenced information is displayed. You might need to configure your Weblink plug-in to make this work.
- To enable searching, there is an index file (.PDX) for each book, and one for the entire library. For more information about searching see the '[Search](#)' panel.
