## Overview

In Business Process Manager 8.5 Business Process Authors can use Process Designer to quickly define and simulate the business processes needed. This task provides a completed sample of a business process that has been created in this way including all the information models used in the tutorial. This will form the basis for the remainder of the tutorial. You should complete all steps in this task to understand the tutorial scenario.

### Step 1. Import Process Application Definition

The Business Process author will define a business process application to contain the Business process and decisions that they require. This must be imported into Process Center before you can examine it.

Login to Process Designer as admin / admin

Navigate to Process Center by clicking the icon below

Import the completed Process App by selecting the Import Process App link.

Browse to **[SupportPac LA71 Path]\BPMTutorial\task1\Insurance\_Sample - LA71TT1.twx** and click **OK**.

In the **Will be Imported** screen check the name of the Process App and click **Import**.

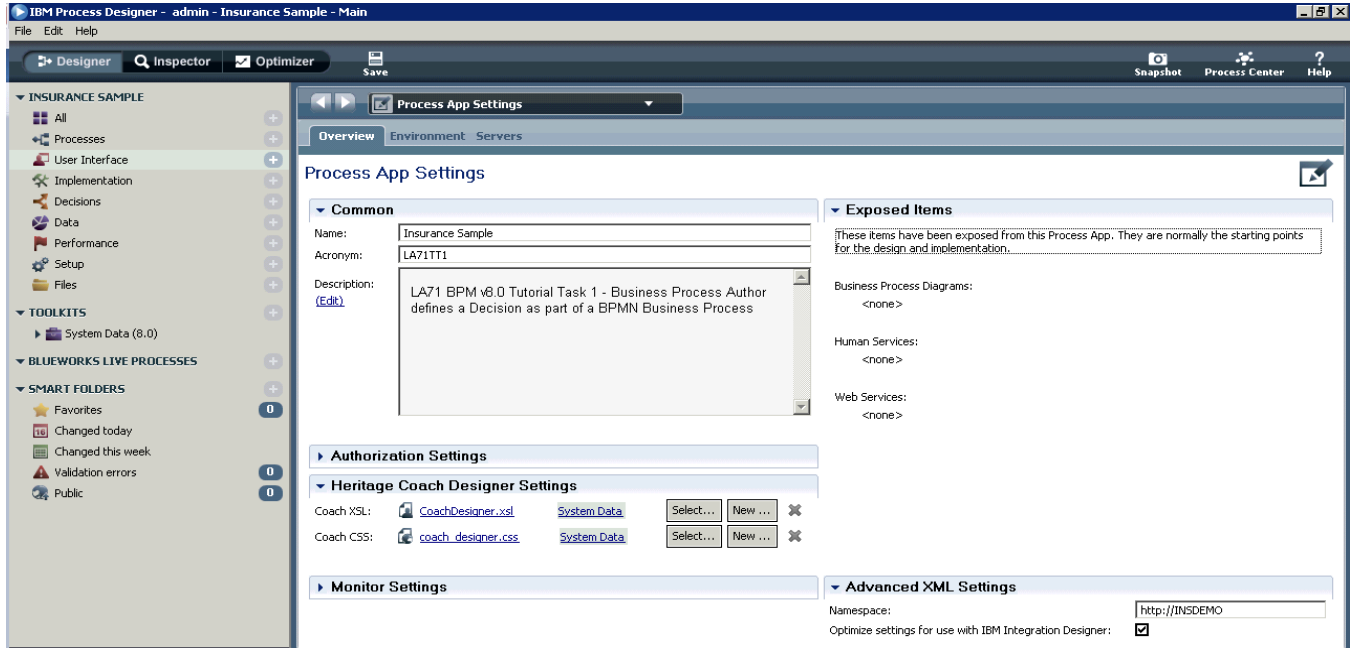

The Insurance Sample (LA71TT1) - Process App should be visible in Process Center when it finishes importing.

Select the **Open in Designer** link and Process Designer opens the Insurance Sample.

The Process App Settings screen shows the main details for the Process Application. Note that in this case the default Namespace used for all the Business Objects and interfaces has been defined

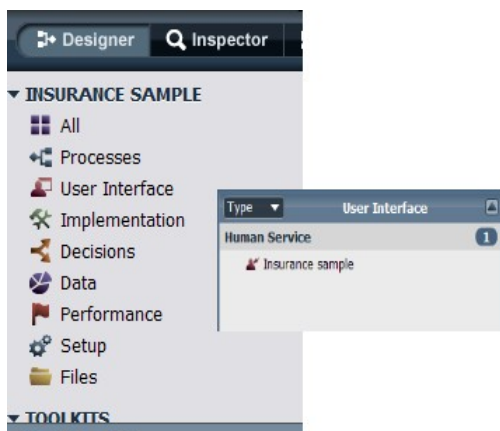

as <http://INSDemo> to keep consistency with the schemas that will be used by the development team using Integration Designer..

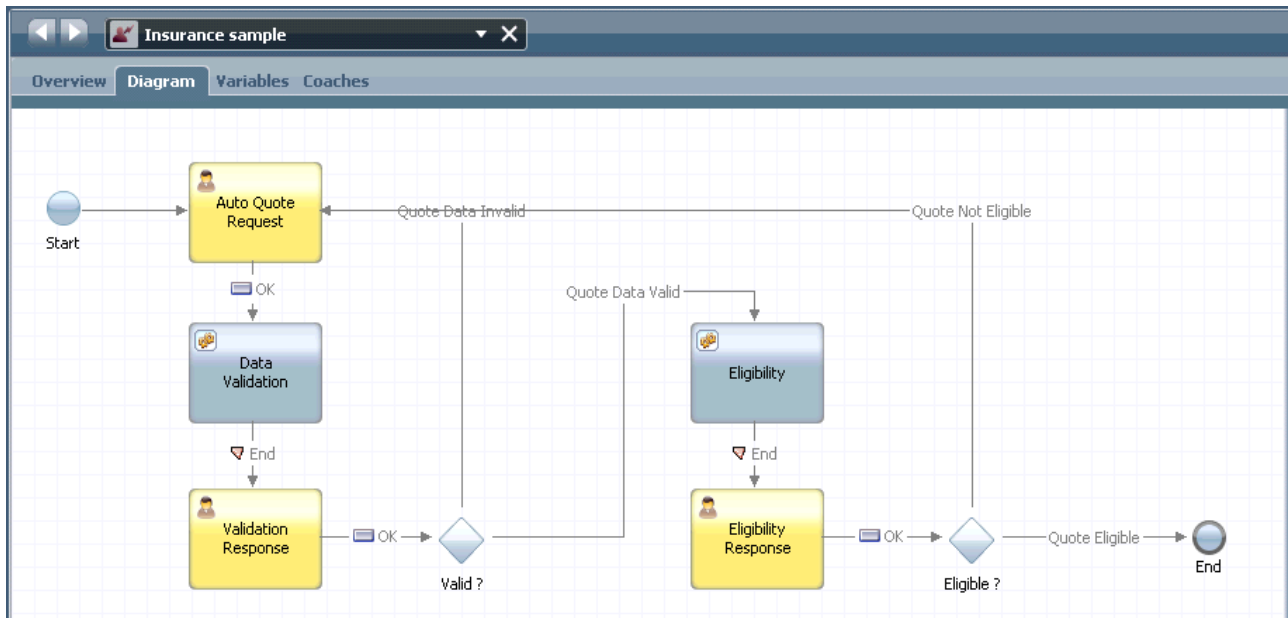

## Step 2. Examine the Business Process.

The Insurance sample has a very simple process consisting only of a User Interface flow. To examine the flow:

Select the **User Interface** icon and from the pop-up double-click on the **Insurance sample** Human service.

The diagram tab shows the human service flow that will be used in this scenario.

The **Auto Quote Request** Coach provides a means to set up details of the driver and vehicle for which the insurance quote is required. The **Data Validation** and **Eligibility** Nested Services are place-holders for the decisions to be made. These initially invoke the embedded rules services provided in Process Designer but will later invoke the Advanced Integration Services provided by development through Integration Designer.

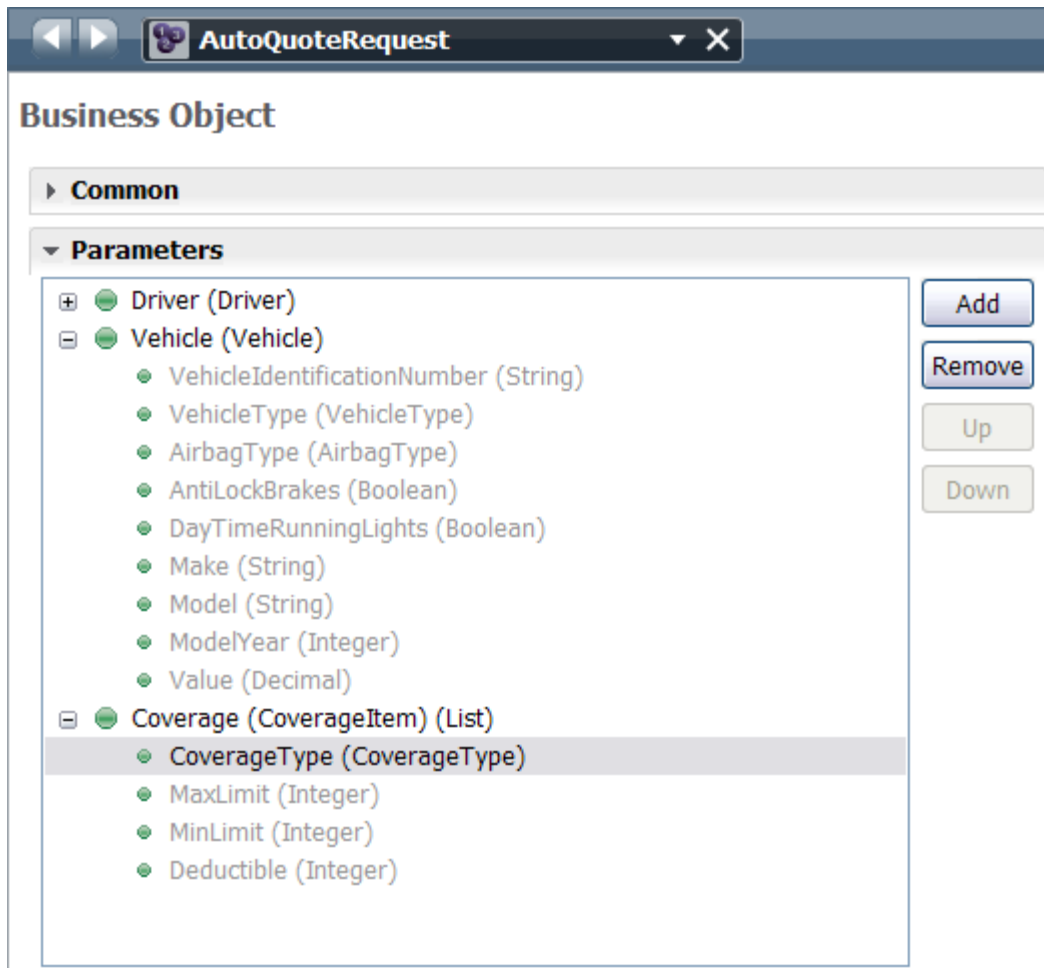

**Validation Response** and **Eligibility Response** are Coaches that show the respective decision response. The **Valid ?** Gateway checks the response from the **Data Validation** decision and if any data is invalid returns to the **Auto Quote Request** Coach to re-enter the data. The **Eligible ?** Gateway checks if the quote request was deemed eligible for the quote and if not, again returns to re-enter the data. While not a realistic scenario this allows the two decisions to be easily evaluated.

### Step 3. Examine the Information Model used in the process.

The Business Process Author will define an information model describing the characteristics of the quote that are important to the business. This would include details of the drivers, vehicles and type of cover required. All this information is described in the form of Business Objects in Process Designer allowing the Business Process Author to quickly express the sort of information they need. To examine the Information models select the **Data** icon and double-click the **AutoQuoteRequest** Business Object from the pop-up.

This will result in the **AutoQuoteRequest** Business Object editor opening where the structure and fields of the object can be viewed and edited.

Each parameter can be a simple structure, another business object or a list.

Enumerations can be supported by making the business object a simple type selection as shown below. This will appear as a domain in any rule vocabulary allowing a selection to be made from the choices available.

Double-click the **GenderType** business object under the **Data** icon to see an example.

**Business Object**

**Common**

Name: GenderType

Modified: tw\_admin (Jun 5, 2011 12:24:21 PM)

Documentation:

**Behavior**

Definition Type: Simple Type

**Simple Type**

Type: Selection

Error Message:

**Selection Validation**

Value	Display Text
male	male
female	female

Add Remove

Internally these information models are converted into schemas which are used later when interfacing to Integration Services and Rules. These schemas may be viewed in the advanced properties panel by pressing the **View XML Schema** button.

**Advanced Properties**

**XML Serialization:**

Exclude from XML: false

Anonymous Type: false

Type Name: <default>

Namespace: <default>

Element Name: <default>

Element Namespace: <default>

Base Type Name: <default>

View XML Schema

This results in a schema that can be viewed and saved as shown below. (Take business object **AutoQuoteRequest** as an example)

```

- <xs:schema targetNamespace="http://INSDemo" elementFormDefault="qualified" attributeFormDefault="unqualified">
- <xs:complexType name="AutoQuoteRequest">
- <xs:sequence>
  <xs:element name="Driver" type="tns:Driver" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Vehicle" type="tns:Vehicle" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Coverage" type="tns:CoverageItem" minOccurs="0" maxOccurs="unbounded" nillable="true"/>
</xs:sequence>
</xs:complexType>
- <xs:complexType name="Driver">
- <xs:sequence>
  <xs:element name="DriverID" type="xs:int" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="FirstName" type="xs:string" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="LastName" type="xs:string" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Age" type="xs:int" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="StateOfResidence" type="xs:string" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Occupation" type="xs:string" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Gender" type="tns:GenderType" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Married" type="xs:boolean" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="Graduated" type="xs:boolean" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="FullTimeStudent" type="xs:boolean" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="GoodStudentCertificate" type="xs:boolean" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="DrivingLicenseNumber" type="xs:string" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="FirstDrivingLicenseDt" type="xs:dateTime" minOccurs="0" maxOccurs="1" nillable="true"/>
  <xs:element name="VehicleVandalizedOrStolen" type="xs:boolean" minOccurs="0" maxOccurs="1" nillable="true"/>

```

These schemas then form the basis of the information model for both decisions and processes.

#### Step 4. Definition of Decision services and associated vocabulary.

The decisions within the process are defined as decision services and may be examined by selecting the **Decisions** icon in the navigator.

This shows the two decision services that the Business Process Designer has created. Selecting each of these shows the flow that represents the decision service. For the **DataValidation** decision service, this includes a single BAL Rule called **Data Validation**. Each BAL Rule will result in its own rule project when exported.

The signature of the decision service is setup in the **Variables** tab. This references the Business Objects defined earlier and forms the basis for the vocabulary used when authoring rules. The parameters appear as variables in the rules while the business objects appear as object types within the vocabulary.

**Variables**

- Variables
  - Local
    - Input
      - AutoQuoteRequest (AutoQuoteReque)
        - Driver (Driver)
        - Vehicle (Vehicle)
        - Coverage (CoverageItem)(List)
      - Output
        - DataValidationResponse (ValidationR)
          - Validated (Boolean)
          - MainMessage (String)
          - ErrorMessage (String)(List)
  - Private
  - Exposed Process Variables
  - Localization Resources

**Details**

Name: AutoQuoteRequest

Documentation:

Is List: ☐

Variable Type: [AutoQuoteRequest](#) Select... New

**Default Value**

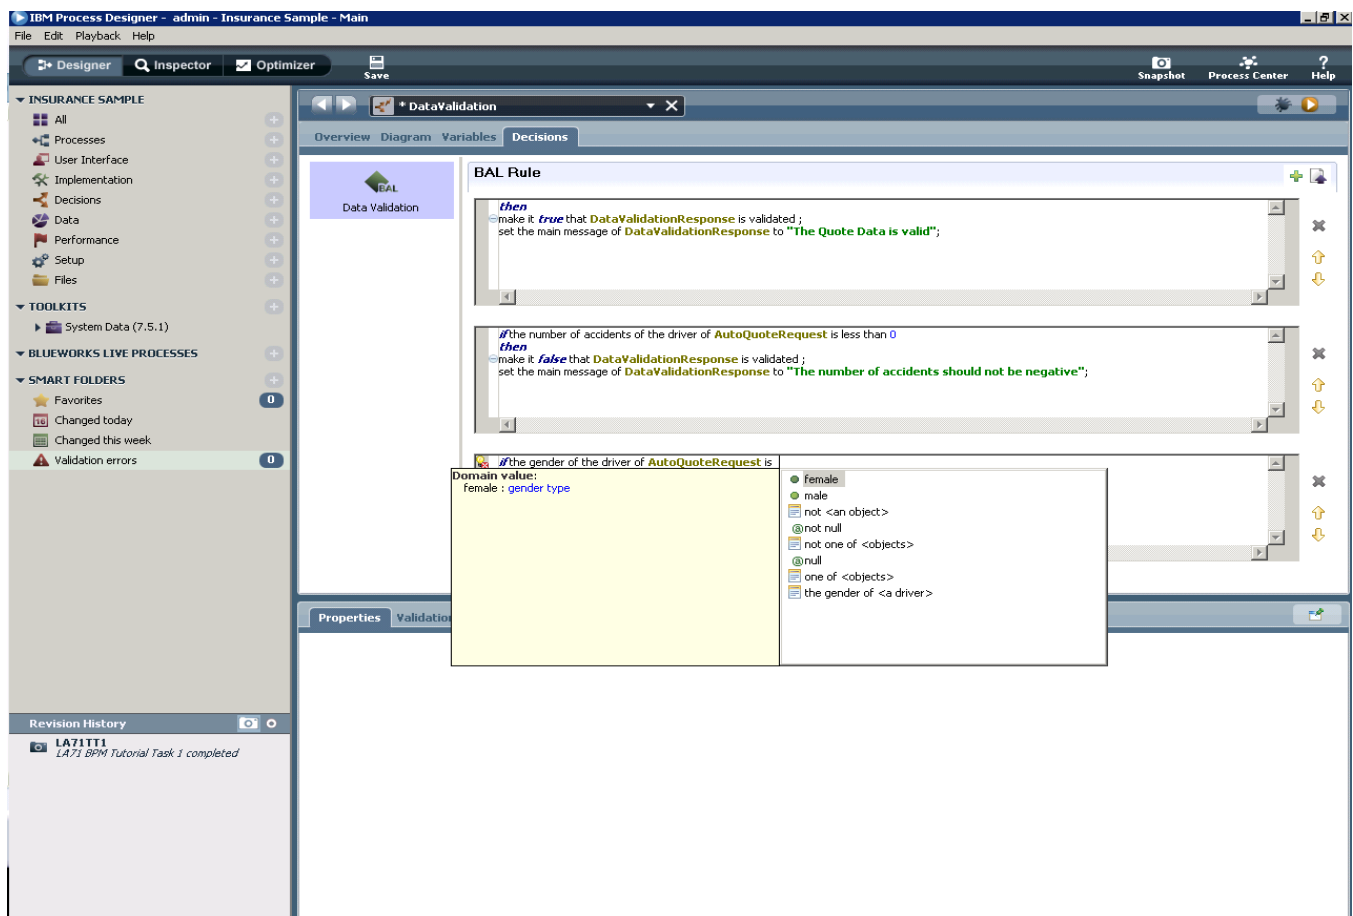

Has Default: ☒

Property	Value
Driver	
DriverID	0
FirstName	""
LastName	""
Age	0
StateOfReside	""
Occupation	""
Gender	"male"
Married	false

## Step 5. Definition of the decision rules.

Now the vocabulary has been defined, the rule editor can be used to define the behavior required as shown below. The rule editor is context sensitive and prompts for possible terms to complete the rule including showing the possible values of domains as shown here.

Navigate to the **Decisions** tab which should show the **Data Validation** BAL Rule. Add a new rule by clicking the + icon and then experiment with the intellirule editor.

Delete the rule you created before progressing further in the tutorial.

## Step 6. Testing the embedded rules decisions in the process

The Business Process Designer can test and iterate around the information models and the decisions that are required. Using the coaches the data required can be entered and the decisions tested.

In this tutorial you will modify the number of accidents to check each of the decisions. Select the **User Interface** icon and double-click on the **Insurance sample** human service.

Click the **Run** icon.

In the **Auto Quote Request** Coach, type **-1** in the **Number Of Accidents** field. Click **OK**, which should result in the **Data Validation** decision showing an invalid response.

**Auto Quote Request**

**Driver**

First Name:

Last Name:

Age:

Gender:

Number Of Accidents:

**Vehicle**

Vehicle Identification Number:

Make:

Model:

Value:

OK

**Validation Response**

Validated: ☐

Main Message:

OK

Press **OK** again to get back to the **Auto Quote Request** coach.

This time set the **Number of Accidents** to **5**. Click **OK** to move to the next screen, which should provide a valid response. However, when you click **OK** again to move to the next screen, the quote should not be eligible.

**Auto Quote Request**

**Driver**

First Name:

Last Name:

Age:

Gender:

Number Of Accidents:

**Vehicle**

Vehicle Identification Number:

Make:

Model:

Value:

OK

**Validation Response**

Validated: ☒

Main Message:

OK

**Eligibility Response**

Eligible: ☐

Main Message:

OK

Finally if the **Number of Accidents** is set to **2**, the validation response should be validated and the quote should be eligible.

Auto Quote Request

Driver

First Name: John  
Last Name: Doe  
Age: 40  
Gender: Male  
Number Of Accidents: 2

Vehicle

Vehicle Identification Number: 123456  
Make: Lemon  
Model: Yellow  
Value: 0

OK

Validation Response

Validation Response

Validated: ☒  
Main Message: The Quote Data is valid

OK

Eligibility Response

Eligibility Response

Eligible: ☒  
Main Message: The Quote Request is eligible

OK

## Step 7. Export the decisions for IT to create a managed decision service.

Once the Business Process Author is satisfied that the decisions are correct each ruleset is then selected and exported as a project. Select the **Decisions** icon and double-click on the **DataValidation** decision service. Open the BAL Rules in the **Decisions** tab.

DataValidation

Overview

Diagram

Variables

Decisions

BAL

Data Validation

BAL Rule

then  
make it **true** that **DataValidationResponse** is validated ;  
set the main message of **DataValidationResponse** to "The Quote Data is valid";

if the number of accidents of the driver of **AutoQuoteRequest** is less than 0  
then  
make it **false** that **DataValidationResponse** is validated ;  
set the main message of **DataValidationResponse** to "The number of accidents should not be neg

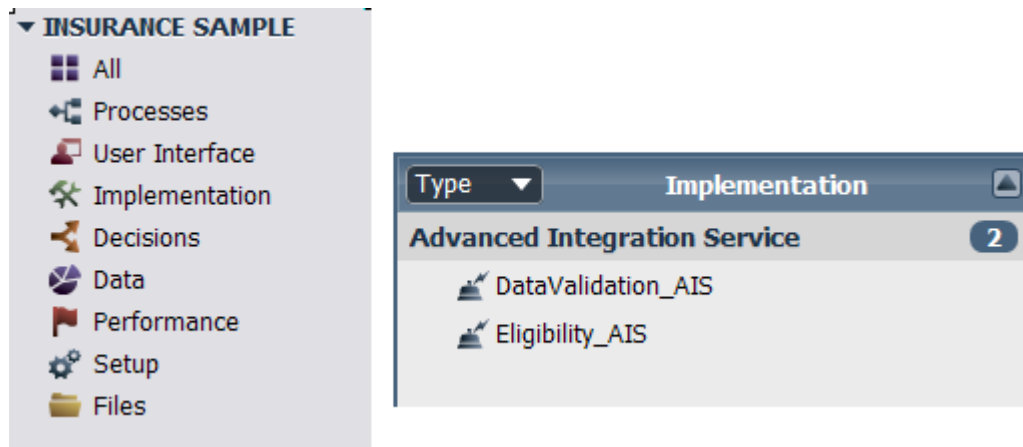

To export the ruleset press the **Export** icon and select the location to save the file.

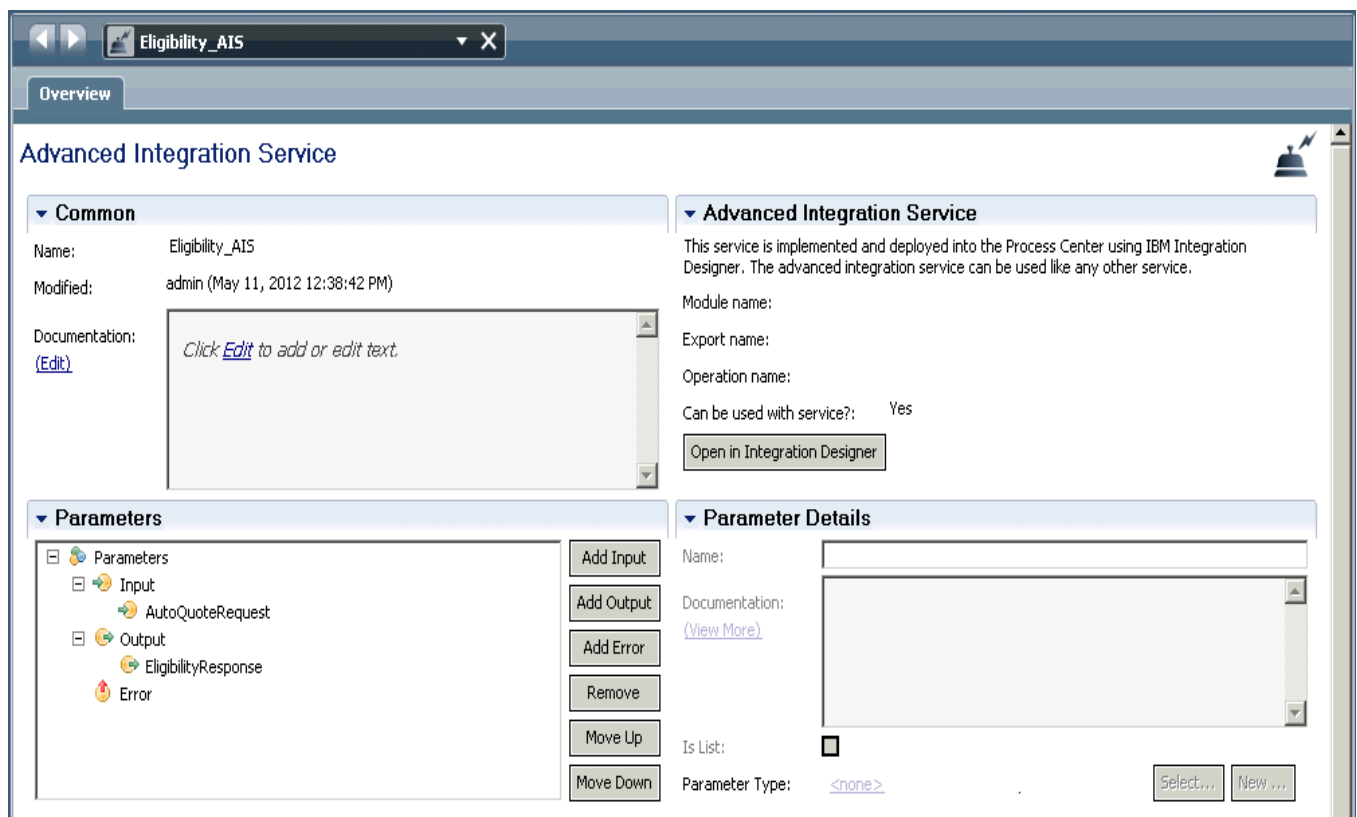

These rules have already been saved to [SupportPac LA71 Path]\BPMTutorial\task1 and will be needed for task 2.

## Step 8. Definition of Advanced Integration Service interfaces for the decisions.

The final step in the Business Process Authors role is to define an Advanced Integration Service that can utilize decisions running as SCA component in Process Server. These service definitions are visible by selecting the **Implementation** icon.

Selecting an implementation then shows the interface for each of these services.

When the IT developers open the AIS in an Integration Designer workspace, the implementation module, exports and operation are defined. Since the parameters are identical to the existing

decision services, these AIS implementations can be easily interchanged with the current decision services.

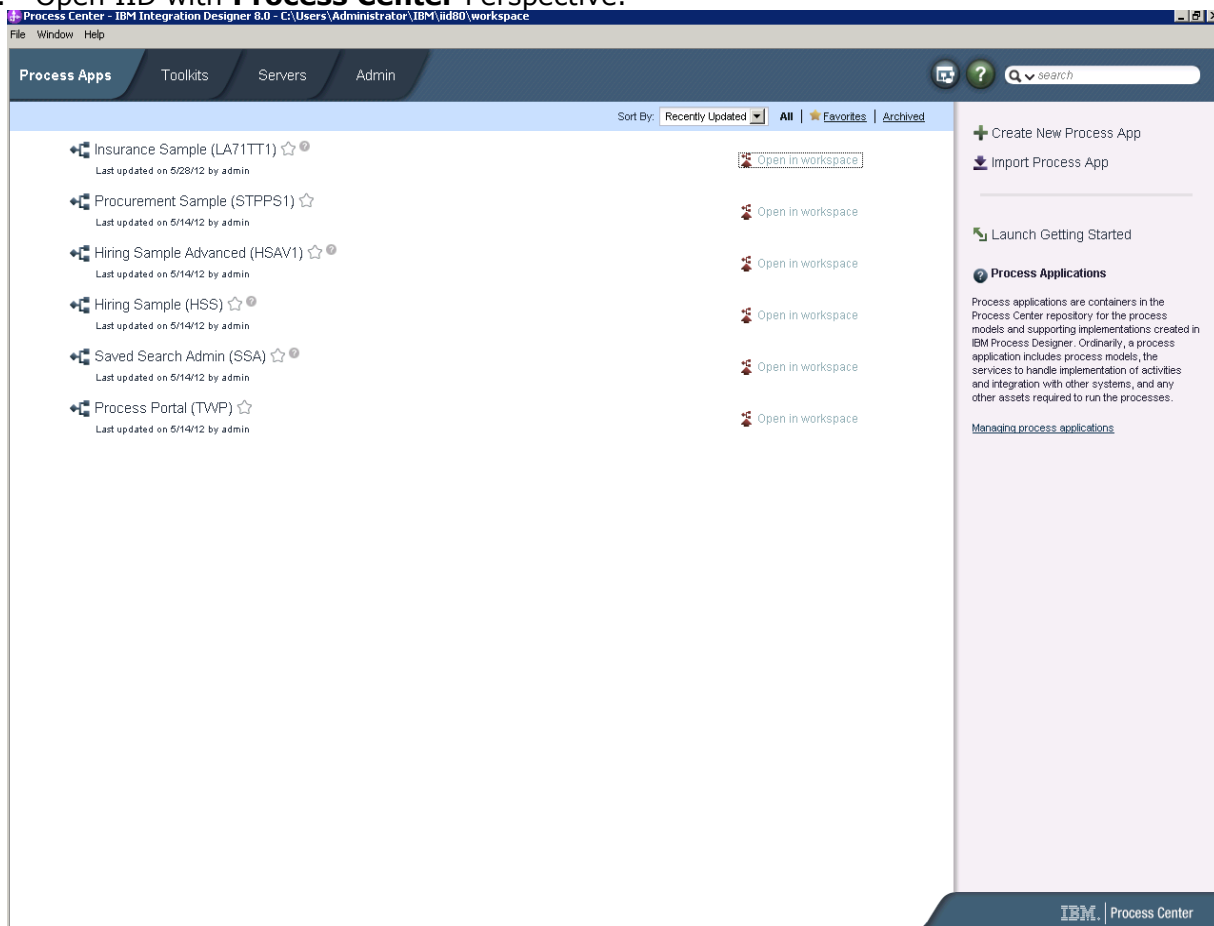

This completes the Business Process Authors definition of the decisions that they wish to manage within this business process. You will revisit the Business Process Author role when the decision implementations are completed.

## Step 9. (Optional) Integration with Decision Wizard Plugin.

In this task you will create a RuleProject together with a Rule App that will form the implementation of a decision service that can be managed by LOB users in Decision Center.

You will use the Eligibility\_AIS interface you created in the previous task to specify the decision information model and ruleset parameters for the decision ruleset.

### 1. Open IID with **Process Center** Perspective.

### 2. Open the **Insurance Sample (LA71TT1)** Process App in workspace.

3. Switch to **Rule** Perspective and right click on **Eligibility\_AIS.wsdl** in **Insurance\_Sample\_Library** project, and click **SupportPac LA71 > Create Decision Service**.
4. Input the Ruleapp Project Name as **LA71AIS\_RuleApp**, and new rule project name as **LA71AIS\_BOM**. Check the **invoke** operation, and update the corresponding rule project name as **Eligibility\_AIS**.

Rule project definition

Please specify the properties associated with rule project generation.

Select an interface:

nistrator\IBM\iid80\workspace\Insurance\_Sample\_Library\Eligibility\_AIS.1.wsd

Browse...

Ruleapp Project Name

**Rule project BOM settings**

Please select the BOM classes to be included in the project.

Choose a XOM entry:

xom:/LA71AIS\_BOM/C:/Users/Administrator/IBM/iid80/workspace/LA71AIS\_BOM/resources/Eligibility\_AIS.xsd

Select classes:

- ☒ ☐ insdemo
  - ☒ AirbagType
  - ☒ AutoQuoteRequest
  - ☒ CoverageItem
  - ☒ CoverageType
  - ☒ Driver
  - ☒ EligibilityResponse
  - ☒ GenderType
  - ☒ Vehicle
  - ☒ VehicleType
- ☒ ☐ insdemo.ais.eligibility\_ais
  - ☒ Invoke
  - ☒ InvokeResponse

Select All  
Deselect All  
Select Required

< Back   Next >   Finish   Cancel

Deselect the **insdemo.ais.eligibility\_ais** package and click **Next >** button.

**Ruleset Parameter**

Please define ruleset parameters.

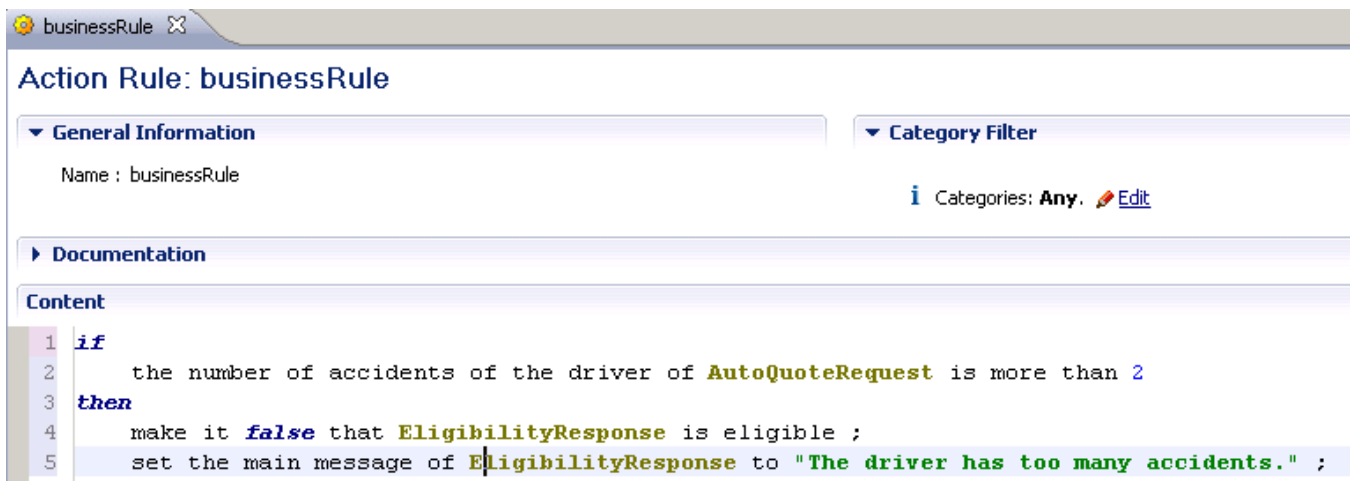

Name	Type	Direction	Default Value	Verbalization	
<input type="checkbox"/> Eligibility_AIS					
AutoQuoteRequest	insdemo.AutoQuoteRequest	IN		AutoQuoteRequest	
EligibilityResponse	insdemo.EligibilityResponse	OUT		EligibilityResponse	

< Back   Next >   Finish   Cancel

Click **Finish** Button to complete generating the projects.

6. Open the **Eligibility\_AIS** rule project.

Open **businessRule** under **rules** in package **Eligibility\_AIS**, and author the rule as follows:

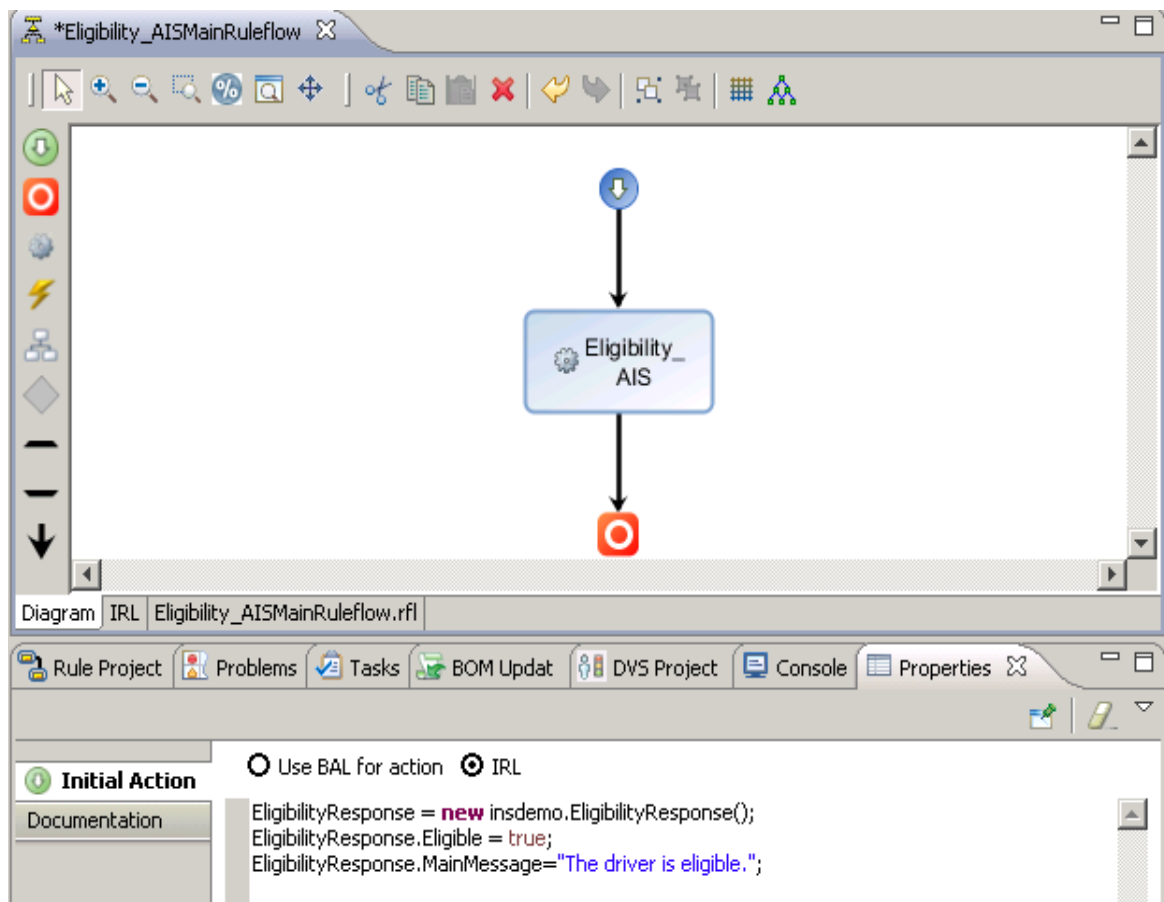

**Save** the rule.

Open the **Eligibility\_AISMainRuleflow** under **rules**.

Add **Initial Action** in the properties view of **Start Node**. Select the **IRL** radio button.

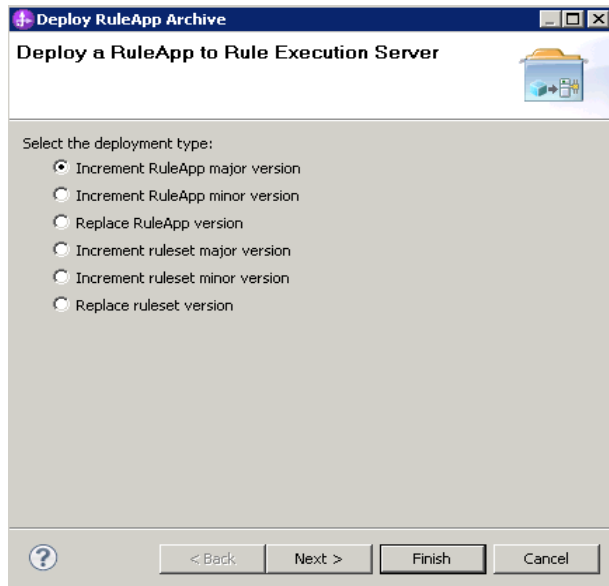

Input the content as

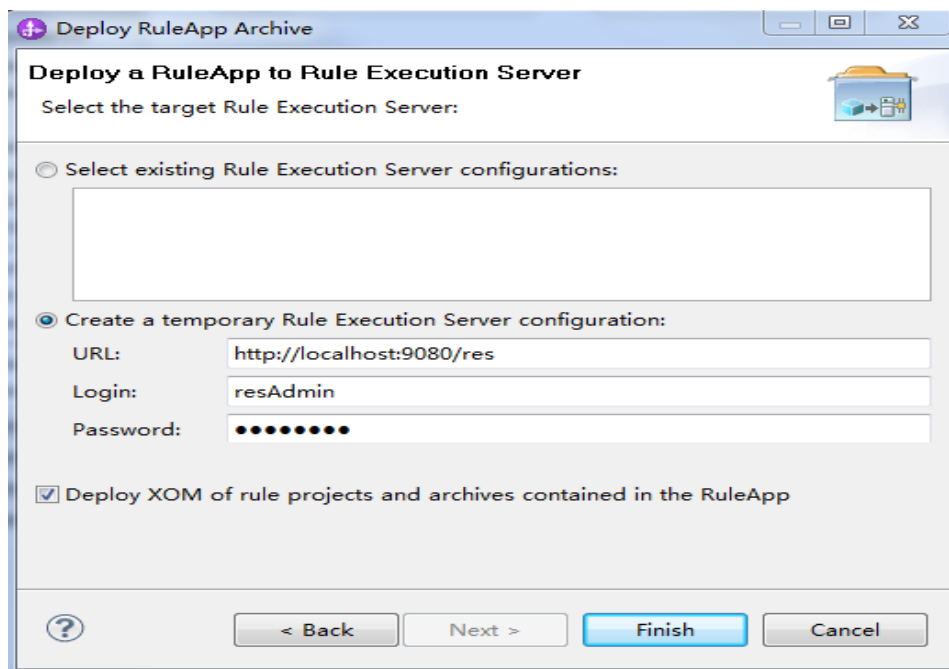

**Save** it.

7. Deploy the **LA71AIS\_RuleApp** into Rule Execution Server and test the **invoke** ruleset.

First, right-click **LA71AIS\_RuleApp** project and select **RuleApp > Deploy**.

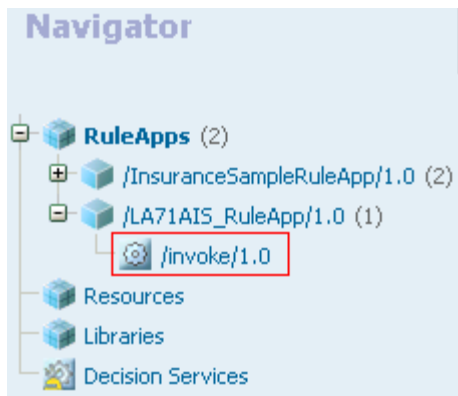

Click **Next >** Button.

Click **Finish** Button.

Login to the RES Console at <http://localhost:9080/res>. Click on the **Explorer** tab, navigate to the **invoke** Ruleset, and click on the Ruleset to show the Ruleset View.
