

M03 VMware VirtualCenter Lab Part 1 of 2**by Peter Escue and Wayne Wigley**

This lab will focus on VMware's administration tool, VirtualCenter. Students will learn how to install and configure VirtualCenter, as well as how to install VMs from the VirtualCenter interface, how to create templates from existing VMs, and then how to schedule a deployment of a new VM based on a template. User rights management, monitoring performance of ESX servers from VirtualCenter, and creating alarms will also be covered.
