Session Abstract

M06 Features / Functions of IBM Director v4.2.
        by Craig Elliott

IBM Director v4.2, the follow-on to the award-winning v4.1, is full of new features, redefining it as a new cross-platform manager. This includes support for pSeries and iSeries as well as xSeries. This session will focus on how these new features can be used to manage cross-platform systems. This session will also discuss how IBM Director fits into the larger Vitalization Engine, our autonomic proof-point for On Demand computing.
