R24 IBM ACT Enterprise Activation Key, Remote Console Manager, Local Console
Manager, and all Conversion Options
by Scott Tease, IBM

The IBM RCM can authenticate users via its local database or by an external server using the LDAP protocol. LDAP is a vendor independent protocol standard used for accessing, querying and updating a directory using TCP/IP.   Based on the X.500 Directory Services model, LDAP is global directory structure that supports strong security features including authentication, privacy and integrity.
