Altiris
Deployment Solution for
Servers 6.1

Product Overview

Deployment Solution for Servers Overview

- Take a server from bare metal to production ready in the shortest time possible
 - Provisioning consists of more than just deploying the OS
 - · OS and network configuration
 - · Application deployment
- Provide ongoing management capabilities for maximum availability
 - Replicate core server configurations
 - Re-provisioning of existing servers based on need
 - Application and driver updates
 - Patch management
 - Remote tools for troubleshooting
- Speed technology transitions
 - Migrate to new server platforms or OSes

> Deployment Solution for Servers Overview

Support for a variety of deployment methods

- Support for scripted OS installation helps speed reference system build process
- Imaging technology enable fast deployment of standard configurations
- Leverage PXE or our patented virtual boot floppy technology (BootWorks) to provide true hands free management
- CD installation

Remote Configuration

- OS configuration
 - SID generation
 - Computer naming
 - Licensing
 - User accounts
- Network configuration
 - Active Directory OU/Domain membership
- Server TCP/IP config

Deployment Solution for Servers Overview

- Easy to use drag and drop interfaces shortens learning curve and increases productivity
 - Web based console offers access from virtually any location
- Heterogeneous OS support means a single management point for both Windows and Linux based servers
- Integration with downstream applications
 - Asset management software
 - Server monitoring and management software
 - Client and mobile management software

Deployment Solution for Servers Overview

- Deployment of application layer
 - Unattended installations enable remote deployment and provide scriptable flexibility
 - RIP technology provides "snapshot" packaging capabilities for fastest deployment
 - MSI support for automated self healing
- Multi-site management* (requires NS)
 - Manage multiple Deployment Servers from a single console
 - Image/file/task replication to remote file servers
 - Centralized scheduling and reporting
- Remote control for remote troubleshooting of headless servers
- Built in workflow and alert management* (requires NS)

Deployment Solution for Servers Core Benefits

Reduce TCO

- Reduce deployment and support costs
- Lower support costs by reducing "touches"
- Deployment Solution pays for itself, often in a single project
- Simplify large scale IT projects
 - Deploy new systems, hardware refreshes, OS migration
- Works in a heterogeneous hardware / OS environments
- Easy to use, integrated solution
 - Replace single purpose utilities
 - Single interface to learn, single point of support
 - Leverage existing IT staff by reducing complexity

- Support for imaging and configuration of Citrix MetaFrame XP
 - Copy and replace disk signatures on Citrix MetaFrame XP servers
 - Benefits
 - · Improved support for imaging Citrix MetaFrame XP
- Support for additional Blade Servers
 - Deployment Solution now supports blade management features for servers from Dell and Fujitsu Siemens
 - Benefits
 - Extends Altiris' industry leading blade server management capabilities to additional vendors

- Create user defined conditions using custom tokens
 - Use a custom token to create conditions when assigning and scheduling jobs that use your own data to perform the condition (instead of pre-defined conditions)
 - Assign jobs to groups of computers and have the task sets scheduled/executed based on a condition being matched in an SQL column or row for any table in the database
 - Benefits
 - Administrators can define conditions on custom tokens and will no longer be limited to pre-defined conditions in the dialog box

- RapiDeploy for Linux and WinPE
 - RapiDeploy now allows execution from Linux and WinPE pre-OS environments to capture and deploy an image
 - Create WinPE or Linux boot disk/CD, load the appropriate pre-OS environment, and run the RapiDeploy executable from a CD, floppy, or network share
 - Capture or deploy an image using the standard Rdeploy command line switches
 - Benefits
 - Linux and WinPE contain more current device drivers than DOS
 - · Provides an imaging solution for pure Linux environments
- Support for scheduling without a mouse device
 - Use the Job Scheduling Wizard to specify, schedule, and execute a job on targeted computers and computer groups
 - Benefits
 - Feature meets Section 508 requirements to improve disability access
 - Customers can integrate DS with voice activation software

- Imaging Support from Linux and WinPE
 - Capture and deploy an image from Linux and WinPE pre-boot environments
 - Create WinPE or Linux boot disk/CD, load the appropriate pre-OS environment, and run the Rdeploy executable from a CD, floppy, or network share
 - Capture or deploy an image using the standard Rdeploy command line switches
 - Benefits
 - Linux and WinPE offer better device drivers than DOS
 - · Provides an imaging solution for pure Linux environments
- Support for scheduling without a mouse device
 - Use the Job Scheduling Wizard to specify, schedule, and execute a job on targeted computers and computer groups
 - Benefits
 - Feature meets Section 508 requirements to improve disability access
 - · Customers can integrate DS with voice activation software

- Native imaging support for Linux (ext 2 & ext 3) file systems
 - Benefits
 - One solution for multiple OS platforms
 - · Faster, more reliable deployments
- Role and scope-based security
 - Restrict access to functions
 - Restrict access to subsets of machines
 - Supports NT authentication
 - Benefits
 - Granular control over functions ensures application security
 - One username and password to remember
 - · Avoids user management issues

- More flexible event/task management
 - Conditional error handling
 - Daisy chain events
 - User-definable, replaceable tokens
 - Embedded VB scripting
 - Benefits
 - Power users and partners have necessary tools for advanced deployments and automation
- Scripted OS installation wizard
 - Build unattended install file with easy to use wizards
 - Build file package
 - Benefits
 - · Easily build reference systems for clean images
 - · Simplifies and reduces training
- Server side scripting
 - Execute scripts on the server w/ client context
 - Benefits
 - Perform truly advanced deployments and provide automation

- Localized console, server, and client
 - Support for French, German, Japanese, Spanish & Simplified Chinese (coming soon)
 - Additional localized client support
 - Support for over 12 languages
 - Benefits
 - Better support global companies

> Support for IBM Servers

- Deployment Solution 6.1 supports IBM's xSeries Servers, including Blade Servers
- DS 6.1 has integration with the IBM Server Guide Toolkit
- Deployment Solution 5.6 SP1 provides native Linux support for IBM

>

Deployment Solution - Success Stories

The \$300,000 we spent on Altiris Deployment Server is an excellent investment compared to the \$1 million it costs us each time we have to touch all the workstations. Altiris is the only game in town. No one else is even close. — IT Manager for department of U.S. Government

Since we started using Altiris eXpress Deployment Server, we have decreased the time it takes to deploy software images to new PCs by 40 percent. -- Sean Sharifian, Warner Brothers Inc.

Our Altiris software paid for itself in just 6 months. The return on investment was tremendous! -- Lee Prejean, Lamar Technical Institute

I'd used other comprehensive suites. But finding the key features we needed at such a substantially lower price made Altiris eXpress the perfect solution for us. -- John West, BigFatWow

Altiris eXpress Deployment Server's simplicity sets it apart from other solutions. -- Mike Ratterman, First American CREDCO

> Accolades and Awards

- Deployment Solution is an integral part of the Altiris Client Management Suite, which won the Network Computing Magazine's Editor's Choice Award, November 2003 (in both the US and Germany)
- Deployment Solution won the Network Computing 2003 Well-Connected Award in the category of 'Storage Software or Service.'
- Deployment Solution is a component of Client Management Suite, which won the Best New Technology award in the category of "Enterprise Application Software" at FOSE 2002 from Government Computer News.
- Altiris' deployment and migration technology won the coveted Network Magazine 2002 "Product of the Year Award" for "Systems and Desktop Management."
- Deployment Solution was awarded the Network Computing Editor's Choice in a review of disk imaging products, September 2002, beating out Ghost Enterprise Edition and Power Quest Deploy Center
- PC Magazine awarded PC Transplant Pro a 5-out-of-5 score in January 2001

> Summary

- Altiris Deployment Solution for Servers provides:
 - Comprehensive bare metal server provisioning and management capabilities
 - Reconfiguration and deployment of existing servers for maximum availability
 - Multi-site management for centralized control
 - Significant reduction in TCO for managed servers
 - User friendly design/interface for simplified management
