## Trade Up Any Non-IBM Email User License and Enjoy Lotus Collaboration<sup>1</sup>

Offer for 50 Users with IBM System x3650 M3 Server

Price estimated at **RM34,253**

### Collaboration solutions for today and tomorrow

*With an eye towards the future, you want to choose technology with the flexibility to meet tomorrow's challenges. As your organization adapts to new priorities, you'll want solutions with the security-rich features, scalability, choice of delivery model, and built-in capabilities to adjust to your changing needs - while still bringing people together and enabling them to perform their best.*

### Nurture collaboration across boundaries

*Communities and teams are most effective when they're not blocked by time zones, geography, or organization charts. When people can discover information, tap knowledge networks, and share ideas, innovation blooms and business practices flourish. IBM social computing helps you discover experts, expand personal networks, and make it a snap to share - so teams can function better and outmaneuver your competition.*

### Optimize compliance and approval processes

Lotus Domino software is built on a workflow-driven architecture, helping you to simplify your business processes. You can automate, manage and monitor the routing of approval-driven processes, helping you to audit them consistently and effectively. Plus drastically reduce the time and expenses associated with tracking compliance requirements.

### Accelerate your business processes

Lotus Notes and Domino software can bring together multiple applications on the desktop to share and dynamically change information in real time. By optimizing the information for the task at hand and freeing end users from distraction, time can be reduced for you to focus on time-sensitive business processes.

### Take control of your information

You can streamline and optimize your processes in ways that aren't possible with paper. Searching, sharing, updating, input validation and checking—practically every step of the process is faster and more cost-efficient. And creating security-rich, document-driven applications is easier than ever.

Please call **1800 88 1155** today to find out how you can enjoy these savings and start messaging and collaborating the smart way today!
