 with
IBM's Host Integration Solution

- ... want to allow your Business Partners access to update raw materials information, inventory and other business related data ?
- ... want to allow your mobile sales force to check inventories on-line before making commitments to customers ?
- ... like your Dealers and Business Partners to be able to enter orders and check status on-line ?
- ... like to gain business productivity by making your enterprise data more accessible to your employees ?

IBM's eNetwork[™] Host Integration Solution opens the doors to your enterprise applications and data — whenever you need it — wherever you need it. This solution helps you integrate intranets, extranets, and the Internet with your existing applications and data, and allows you to securely extend the reach of your business to your employees, business partners, and customers — wherever they are.

With Host On-Demand and Communications Server for NT[®], two components of the Host Integration Solution, you can access your AS/400, IBM mainframe, and UNIX[®]-based host applications and data through a web browser of your choice. There is no need for costly re-writing of your existing host applications; Host Integration will web-enable these applications by turning your web browser into a host emulator. Enable your company for e-business today, and start leveraging the tremendous reach of the Internet.

Enroll

1.800.289.0579

Enroll in this one hour no charge teleconference, Tuesday, August 18th by calling 1.800.289.0579 and requesting your priority code.
