

We've got LAN to host **reliability**
covered at both ends

The AS/400 users on your LAN need to access the print data from your IBM AS/400 systems. The solution you choose needs to enhance the integration of IBM AS/400s into your Novell® NetWare® networks by directing AS/400 print jobs to any of your installed NetWare printers.

NetWare HostPrint/400™ is a NetWare Loadable Module™ (NLM™) that executes on a NetWare for SAA or NetWare for SAA:AS/400 Edition server. NetWare HostPrint/400 provides the ability to direct AS/400 print jobs to a NetWare printer.

NetWare HostPrint/400 is a member of the family of NetWare for SAA products which is jointly developed and supported by Novell and IBM.

NetWare HostPrint/400 can reduce LAN traffic and simplify network administration while providing flexible AS/400 print services on NetWare-supported printers.

REDUCES LAN TRAFFIC

NetWare HostPrint/400 can significantly reduce LAN traffic by concentrating print output to LAN-based printers rather than to individual workstations. NetWare HostPrint/400 provides the capability to centrally administer and control print functions, reducing the cost of management while increasing reliability.

SIMPLIFIES ADMINISTRATION

NetWare HostPrint/400 provides a significant improvement over a workstation-based solution: rather than configuring each workstation, the network administrator configures and manages all printer sessions and print jobs using familiar NetWare utilities such as PRINTCON and PCONSOLE.

NetWare HostPrint/400 provides a reconnection feature that automatically reestablishes a connection with an out-of-service

NetWare® HostPrint/400™

Novell.

server and its associated print queues once the server comes back on line.

NetWare HostPrint/400 supports dynamic loading, unloading and reconfiguring of NetWare HostPrint/400 services without having to bring down the server or affecting other services.

SUPPORT FOR AS/400 PRINTING

Your users can print on any NetWare printer on the network and can utilize the capabilities of many industry-standard printers including PostScript (local transform mode only), Hewlett Packard, IBM and Epson.

IBM 5256 OUTPUT. NetWare HostPrint/400 provides IBM 5256 printer emulation directly on the NetWare for SAA or NetWare for SAA:AS/400 Edition server. Off-loading the print transform function to the server conserves AS/400 resources and can significantly improve print performance.

IBM 3812 OUTPUT. NetWare HostPrint/400, in conjunction with the AS/400 host print transform function, can redirect 3812 SCS print output to standard NetWare printers, providing a cost-effective solution to those who need the sophisticated features of the IBM 3812 Pageprinter.

NetWare HostPrint/400 supports up to 253 concurrent printer emulation sessions. For the NetWare for SAA and NetWare for SAA:AS/400 Edition releases that support user-based licensing, one user license is required to support the 253 print sessions. Releases that support session-based licensing require a session license on the server to support each print session.

COUNT ON NOVELL AND IBM FOR RELIABLE

LAN-TO-HOST CONNECTIVITY SOLUTIONS.

NetWare for SAA 2.2 is co-developed by Novell—the provider of NetWare and best-of-breed network services, and IBM—the originator of SNA and the world leader in high-end and mid-range computing solutions. This successful partnership has also produced tightly integrated solutions for AS/400 connectivity and LAN-to-host printing. NetWare for SAA:AS/400 Edition is cost-effective software specifically designed to meet the needs of the networked AS/400 environment. NetWare HostPrint 1.11 offloads 3270 printer emulation to NetWare servers, letting you print host data on networked printers. Likewise, NetWare HostPrint/400™ provides elegant network-based printing for AS/400 system users. Both route host print jobs directly from the host to NetWare print queues, reducing network traffic and providing centralized administration and control.

SYSTEM REQUIREMENTS

SERVER REQUIREMENTS:

- **NETWARE VERSIONS SUPPORTED:** NetWare 3.12, NetWare 4.1, NetWare 4.1 and IntranetWare 4.11
- **NETWARE FOR SAA VERSIONS SUPPORTED:** NetWare for SAA 2.0 and NetWare for SAA 2.2
- **NETWARE FOR SAA: AS/400 EDITION VERSIONS SUPPORTED:** NetWare for SAA: AS/400 Edition
- **IBM PC, PS/2 or compatible with at least a 80386 processor. Higher performance systems are recommended.**
- **8MB additional RAM above the memory necessary to run the NetWare environment**

AS/400 REQUIREMENTS:

- OS/400 V2R2
- (OS/400 V2R3 or later for IBM Host Print Transform)
- OS/400 V3R1
