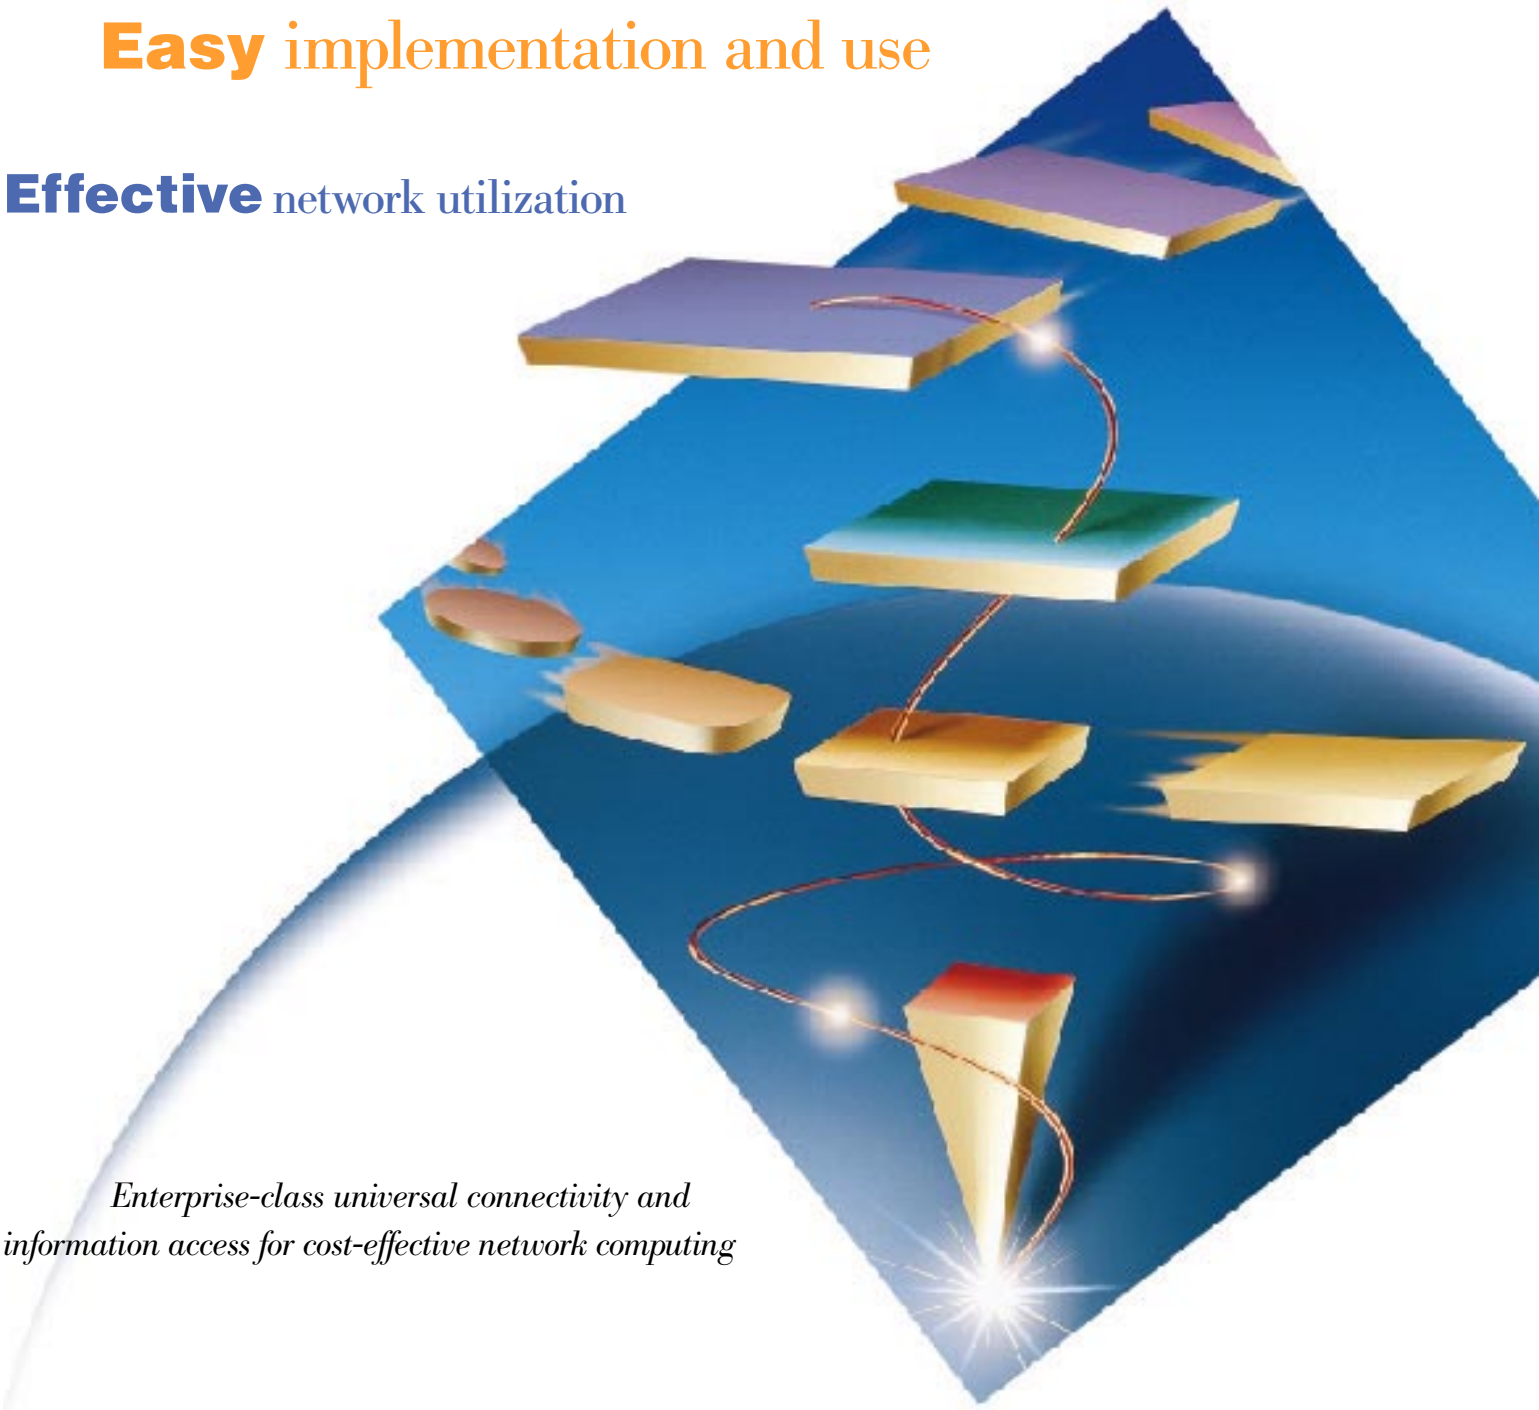
Enterprise-class **dependability**

IBM

End-to-end universal **access**

Easy implementation and use

Effective network utilization



Enterprise-class universal connectivity and information access for cost-effective network computing

eNetwork™ Software

Introducing IBM eNetwork Software

The Internet, intranets, network computing, e-business. It's about combining the easy access and global reach of the Web with traditional enterprise systems, applications, and data to fundamentally change your business—how you communicate, how you manage your suppliers, how you market your products, how you sell to your customers.

More than just great products
IBM eNetwork Software comes with a variety of innovative resources and materials that take you through every step of your buying process.

Assessment Guides feature customer scenarios that give you a peek at the business and technical issues facing enterprises today. They help you understand how eNetwork Software solves your problems and, best of all, include a sample cost/benefit analysis to help you build your own business justification.

Evaluation Kits contain everything you need to install, run, and evaluate the newest eNetwork Software products, including the full product code and documentation. But our evaluation kits offer more than just code. Each kit also includes helpful product information and a road map to lead you on a self-guided tour.

The IBM eNetwork On-Demand Education CD-ROM is just one of the ways you can learn about and obtain implementation and support skills for the eNetwork Software products. With an active Internet connection, you can even link to the eNetwork Software Web site from your CD-ROM, so you can keep abreast of the newest developments.

These materials and other valuable information are available from the IBM eNetwork Software Web site.

It's about new technologies, new concepts, and new models that are reshaping your business—and placing enormous demands on your networking infrastructure. That's why we've introduced IBM® eNetwork™ Software.

IBM eNetwork Software provides enterprise-class universal connectivity and information access for cost-effective network computing. By combining IBM's expertise in delivering industrial-strength solutions for the enterprise environment with the latest networking technologies, eNetwork Software provides the foundation you need to capitalize on the latest technologies and ways of doing business.

eNetwork Software offers a full range of networking software products:

- The Communications Server product line connects people and applications, even when platforms and networks are diverse. This gives you the freedom to address business issues without being hindered by application dependencies or network design.
- With a broad range of communication clients, eNetwork Software puts information within the reach of all users. From Personal Communications, the industry's premier solution for emulation and desktop communication, to Host On-Demand, a Web-based solution for accessing host applications, you can select the access method that's best suited to your needs. And with Communications Suite, the most powerful "universal client" available today, you have complete and easy access to your host applications, Lotus Notes®, your intranet, and the Internet—all in a single package.
- ARTour™ makes it possible to extend your applications and data even further through wireless communication to connect your mobile employees, wherever they are, to the enterprise.

It's more than just the breadth of products that makes eNetwork Software unique in the industry. eNetwork Software products are designed and built on the essential elements required to address your networking needs:

- Enterprise-class dependability
- End-to-end universal access
- Easy implementation and use
- Effective network utilization

With eNetwork Software, you'll see your network as a competitive business advantage, not an IT constraint.
