

BIG DATA: PAST, PRESENT AND FUTURE - AN ANALYST'S PERSPECTIVE

Carl Olofson: Research Vice President, IDC

Mark Simmonds, IBM Enterprise Architect and Senior Product Marketing Manager, IBM Software Group

January 21 2014

Webcast Agenda

- Big data in the enterprise Carl Olofson, IDC
- Making big data a reality IBM System z Information Management solutions
- Summary and Call to Action
- Q&A

Big Data in the Enterprise

Carl Olofson Research Vice President IDC

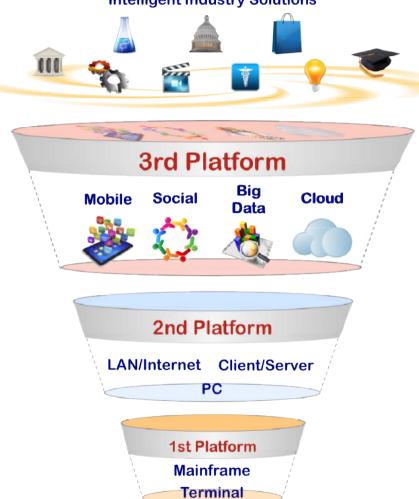

Agenda

- Market Demand for Big Data
- The Maturing of Big Data in the Enterprise
- Big Data Technologies and Their Uses
- Future Directions
- Conclusions and Recommendations

Market Forces: The 3rd Platform

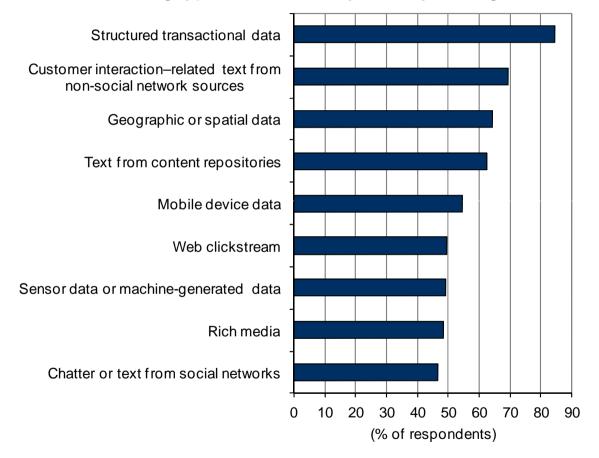

Intelligent Industry Solutions

The Demand for Broad-Based Analytics

Q. Are the following types of data analyzed in your organization?

What Does Big Data Mean To You?

CPG company is conducting experiments in digital marketing with online retail and social media partners.

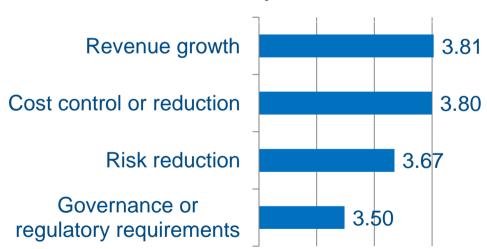

Telecommunications company is improving predictability of customer churn

Manufacturer of wind turbines uses weather data and big data technology to identify optimal locations

Mean response

Retailer is scoring customers based on their on- and off-line behavior

<u>Credit card company</u> is improving fraud detection capabilities

How important are each of the following outcomes as drivers of business analytics initiatives at your organization?

IDC and Computerworld 2013 Business Analytics Survey

IDC Big Data & Analytics Maturity Model

Business vision, strategic intent, operational metrics, sponsorship, project and program justification

Technology and analytic skills, intra- and intergroup collaboration, organizatio nal structures and cultural readiness, talent sourcing

Optimized Managed Repeatable **Opportunistic** Ad Hoc

Quality, relevance, optimized availability, trustworthiness, governance, security, and accessibility

Monitoring, collection, conso idation, integration, analysis, nformation dissemination & consumption, and decision making, visualization, reporting

TECHNOLOGY

Appropriateness, applicability, and performance of technology and IT architecture to the relevant workloads, integration strategy

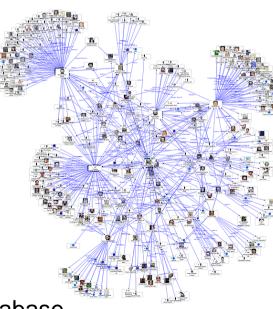

Big Data: The Second Wave

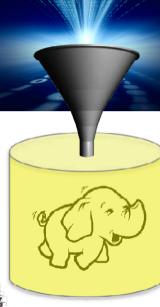

- Hadoop will share the Big Data space with other technologies.
- Some conventional scalable data warehouse (RDBMS) platforms may also have to yield to these newer technologies.
- A whole new workload, based on pattern and relationship analysis will be served
- Hadoop is especially useful for large scale ingestion of unorganized data, and for bulk aggregation and other deep analytics.
- Other technologies will address very demanding analytic workloads not well served by Hadoop or RDBMS.

"NewSQL" for Complex Transactions

(traffic management example)

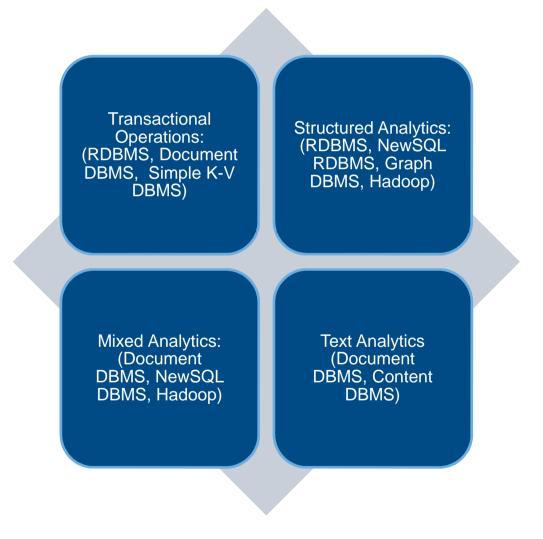

Hadoop for Data Ingestion and Bulk Processing

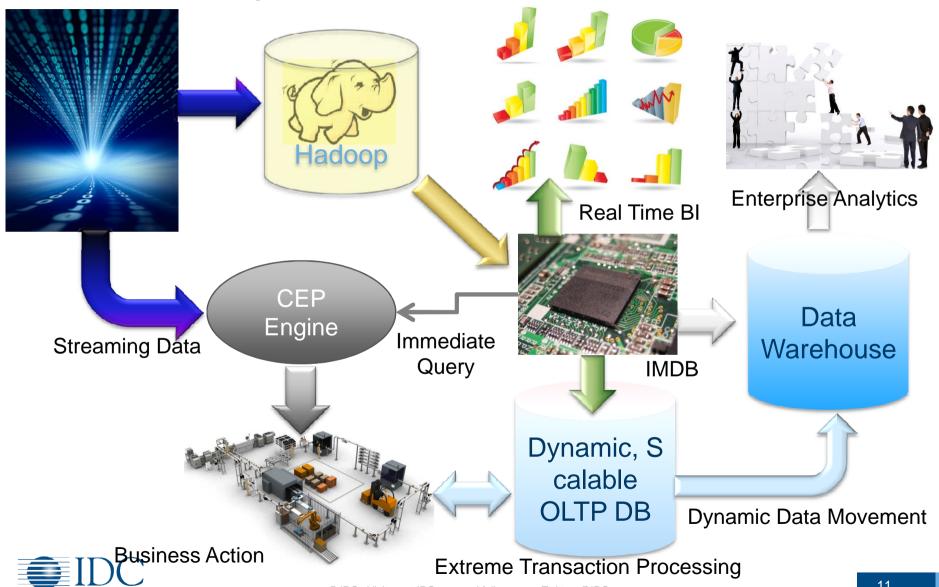

Graph Database

Use Case Classes

Extreme Transaction Processing in the Real Time Enterprise

Analyze the Future

Important Technology Advances

- RDBMS, Including NewSQL
 - Memory-optimized technology
 - Columnar compression that actually improves performance
 - Vector processing
- Document-Based DBMS
 - Improved compression and IMDB support
 - Improved consistency and recoverability
 - Schema elements that blur the lines with NewSQL
- All DBMS technology (hardware)
 - Advances in memory addressability
 - Non-volatile memory (NVM)

Key Challenges

- System Level Management
 - Existing technologies are disjoint.
 - No overall control is possible.
- Granular Data Security
 - Sensitive data can be accessed easily.
 - Protection of data at the field level is difficult.
- Integrated Systems and Functions
 - Various Hadoop, NoSQL, Graph DB, etc., technologies are not designed to work together or with conventional IT resources.
- Holistic, Cloud-Based System Architecture
 - An economical, manageable approach to Big Data requires virtualization, flexibility, and elastic scalability.
 - The ideal is a core platform that exudes these qualities.

Conclusions / Recommendations

Conclusions

- We are still in the early days of Big Data deployment.
- Technologies continue to evolve.
- Applications and tools will make these technologies more nearly address real-world workloads with manageability, in time.

Recommendations

- Learn about all the emerging technologies and determine their applicability to various problem spaces.
- Assess your organization's needs for both deep and real-time analytics, and for large scale data management for extreme transaction processing.
- Develop an architectural vision, and a strategy for getting from where you are to where you want to be.
- Identify a key vendor as your partner in this journey who has the right vision, and can support your objectives.

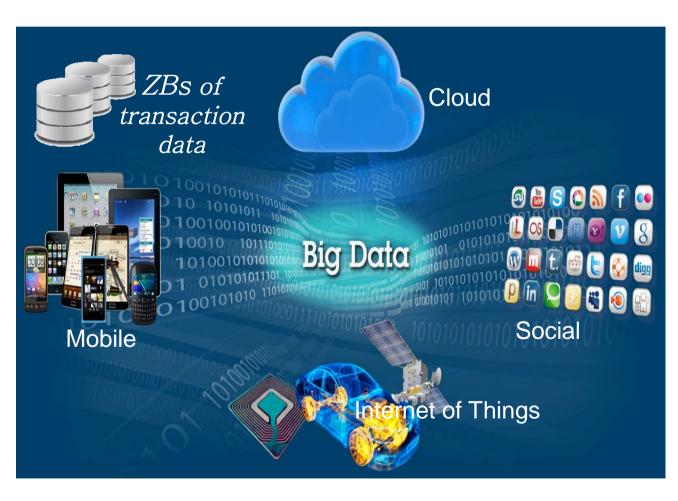

Webcast Agenda

- Big data in the enterprise Carl Olofson, IDC
- Making big data a reality IBM System z Information Management solutions
- Summary and Call to Action
- Q&A

Big Data – Helping to Create a Smarter Planet

- Business models under constant pressure
- Customers are more demanding and connected
- Great relationships trump great products

Majority of today's analytics based on relational / structured data

- Analytics and decision engines reside where the DWH / transaction data is
- "Noise" (veracity) surrounds the core business data
 - Social Media, emails, docs, telemetry , voice, video, content
- What data are you prepared to TRUST?
- Where do you put your trusted Data?

Data Warehouse Integration **Business Analytics** DB2 for z/OS **IMS** Information Governance "Circle of trust" © 2013 IBM Corporation

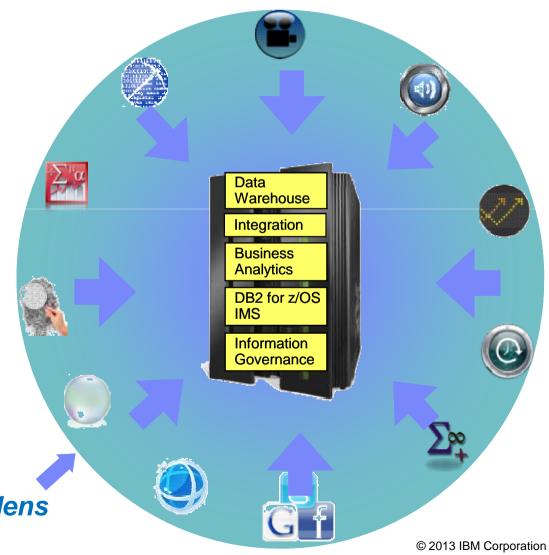

Demand for <u>differently</u> structured data to be seamlessly integrated, to augment analytics / decisions

- Analytics and decision engines reside where the DWH / transaction data is
- "Noise" (veractity) surrounds the core business data
 - Social Media, emails, docs, telemetr y, voice, video, content
- Expanding our insights getting closer to the "truth"
 - Lower risk and cost
 - Increased profitability

"Circle of trust" widens

zEnterprise and Big Data A significant data source for today's business critical analytics

- Data that originates and/or resides on zEnterprise
 - 2/3 of business transactions for U.S. retail banks
 - 80% of world's corporate data
- Businesses that run on zEnterprise
 - 66 of the top 66 worldwide banks
 - 24 of the top 25 U.S. retailers
 - 10 of the top 10 global life/ health insurance providers
- The downtime of an application running on zEnterprise = apprx 5 minutes per yr
- 1,300+ ISVs run zEnterprise today
 - More than 275 of these selling over 800 applications on Linux

Forward Thinking Organizations are creating value from Big Data

The power of Data coming together...

...with the power of Technology...

...to deliver Improved Business Outcomes

1. Enrich your information base with Big Data Exploration

2. Improve customer interaction
with Enhanced 360° View of the Customer

3. Optimize operations with Operations Analysis

4. Gain IT efficiency and scale with Data Warehouse Augmentation

5. Prevent crime
with Security and Intelligence Extension

Big Data & Analytics on IBM zEnterprise

Bringing it all together > Driving greater insight

A Single Solution to:

- ACCESS,
 COMBINE &
 MANAGE a
 relevant mix of
 information
- TIMELY ACCESS for more accurate answers

The Hybrid Vision

Delivering business critical analytics

Core data management solutions for the 21st Century

DB2 11 for z/OS

Unmatched availability, reliability, and security for business critical information

Delivering the highest levels of performance, availability, security, and scalability in the industry

- Up to 40% CPU reductions and performance improvements for (OLTP), batch, and business analytics
- Improved data sharing performance and efficiency
- Integration with InfoSphere BigInsights[™] / Hadoop and noSQL support
- Improved utility performance and additional zIIP eligible workload

- Breaking through 100k TPS 800% greater than IMS 12
- CPU reductions up to 62% for Java Apps
- SQL access to IMS data from both .NET and COBOL applications
- Greater flexibility and faster deployment for new applications with database versioning

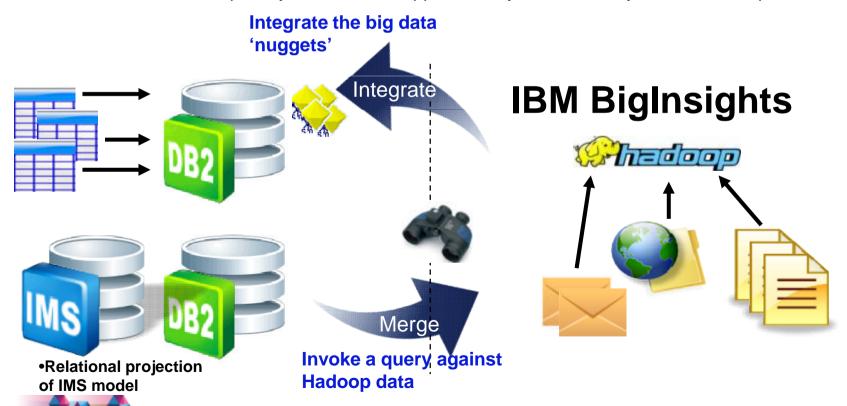

Enhancing Big Data Analytics with IMS and DB2 for z/OS

- Much of the world's operational data resides on z/OS
- Unstructured data sources are growing fast
- 1. Merge this data with trusted OLTP data from zEnterprise data sources
- 2. Integrate this data so that insights from Big Data sources can drive business actions
- IMS & DB2 connectors & DB capability to allow BigInsights to easily & efficiently access each data source
- DB2 connectors & DB capability to allow DB2 apps to easily and efficiently access Hadoop data sources

DB2 11 Support for Big Data

- Goal: integrate DB2 for z/OS with IBM Hadoop based BigInsights Bigdata platform
 - Enabling traditional applications on DB2 z/OS to access Big Data analytics.
- Analytic jobs can be specified using JSON Query Language (Jaql)
 - Submitted to BigInsights
 - Results stored in Hadoop Distributed File System (HDFS).
- A table UDF (HDFS_READ) reads the Bigdata analytic result from HDFS, for subsequent use in an SQL query.
- Must have a variable shape of HDFS_READ output table
 - DB2 11 supports generic table UDF, enabling this function

IBM PureData System for Hadoop

Accelerate Hadoop analytics with appliance simplicity

Accelerate Big Data projects with built-in expertise

- Explore new ways to use all data
- Unlock new insights from unstructured data
- Establish a cost efficient on-line data archive

Simplify with integrated system management

- InfoSphere BigInsights software
- Compute and Storage hardware

Ensure production grade security and governance Easily integrate with other systems in the IBM big data platform

CIO:Insight Apr 29 2013...Issues surrounding how long it takes to get a Hadoop application into production coupled with a lack of real-time capabilities are proving to be important barriers to deployment. As a result, the respondents are reporting that both the number of Hadoop applications and the size of the overall Hadoop environment remain relatively small.

Approaches

Processing done outside z (Extract and move data)

Move data
over
network
Log files in z/OS

Processing in Appliance (z remains the master)

MR jobs, result

Log files in z/OS

Processing done on System z (MR cluster on zLinux)

DB2

Log files in z/OS

z/VM

TECHNOLOGY Deliver dramatically faster analysis

IBM DB2 Analytics Accelerator 4.1

A high performance appliance that integrates Netezza technology with zEnterprise technology, to deliver dramatically faster business analysis

- Speeds up complex queries up to 2000x
- Lowers the cost of long term storage
- Minimizes data latency
- Improves security and reduces risk
- Complements existing investments

Big Data Innovation

with IBM zEnteprise

Banco do Brasil purchases the largest ever DB2 Analytics Accelerator solution to drive customer insight from operational data. The 120-way system can hold 1.28 Petabytes of data. Queries that previously took *11 hours to run now* complete in 26 seconds, over 1500 times faster!

Banca Carige chooses System z to provide real time analytics as part of their Big Data client solution

GPS & sensor information volumes exceeded the capabilities of the existing system. It was redesigned as an enterprise mission critical application using DB2 for z/OS and System z data sharing to now provide JOHN DEERE the availability and scalability to meet the current and future requirements for this solution.

Webcast Agenda

- Big data in the enterprise Carl Olofson, IDC
- Making big data a reality IBM System z Information Management solutions
- Summary and Call to Action
- Q&A

IBM understands your big data requirements

IBM understands all kinds of data

- **Game-Changing Innovation** such as Watson, IBM DB2 Accelerator for z/OS, streaming analytics, Hadoop implementations, expert integrated systems; 20 years of patent leadership, best of breed databases / data warehouses *DB2 for z/OS, IMS....*
- Business-Ready Capabilities big data and analytics capabilities, integrated and hardened for serious use, with mission and business critical qualities of service unmatched in the industry

IBM knows how to turn data into value

- Client Expertise deep industry know-how and solutions with global reach
- Strong Ecosystem growing investment with 360+ business partners & 100+ universities
- **Build on Current Investments** enhance existing analytics and information infrastructure with unparalleled breadth and depth of new capabilities

IBM continued investments in big data and analytics processing

- \$16B+ in Acquisitions coupled with game-changing innovations
- **IBM zEnterprise** The platform with the highest levels of integrity, qualities of service and governance for your business critical applications and processes.
- Analytics Solution Centers visited by 4000+ organizations accessing global expertise
