

# Portfolio Management - Improving Business Agility while reducing Costs

**Rick Slade** 

**Executive Solution Architect** 

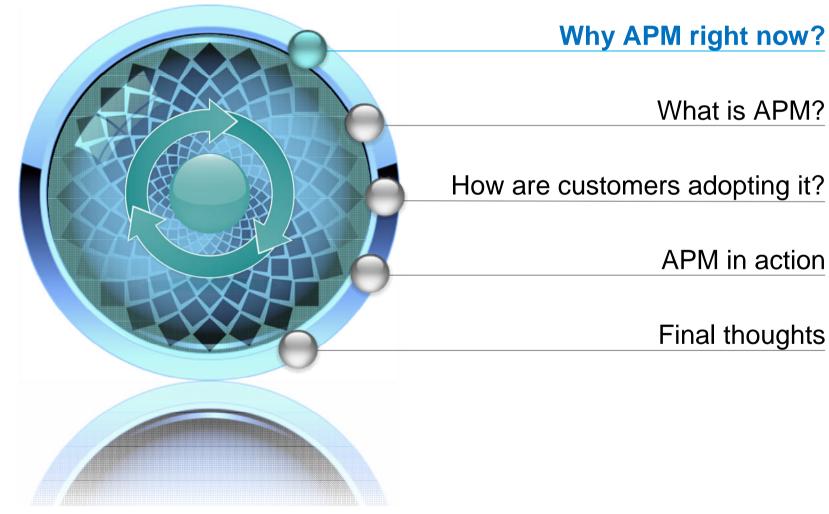

**Rational Software** 

# Agenda

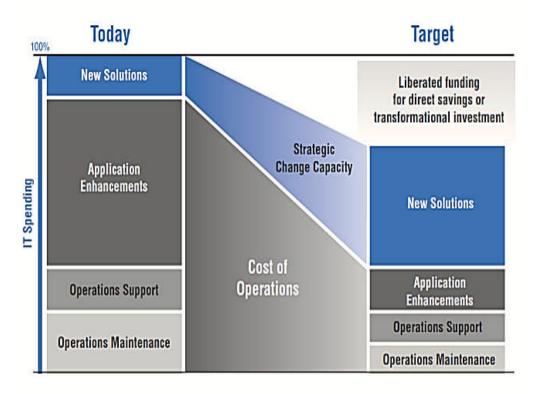

# **Problem: Insufficient strategic spend and lacking business agility**

#### Cost – 80/20 budget trap

- Maintenance and operations consumes a significant % of a declining IT budget, limiting funds available for new initiatives
- Business agility
  - Brittle and tightly coupled architectures, unwarranted complexity, and technology proliferation
- Risk / supportability
  - Skills erosion, baby boomer retirements, and aging technology
- Strategic planning
  - Inability to actively plan strategic initiatives; Cloud, Mobile, Compliance, M&A, and Divestitures

"A large UK bank initiated its APM effort to take a 90:10 ratio for run-the-bank / grow-the-bank down to a more reasonable 40:60 ratio. Dell shifted its maintenance-to-innovation ratio from 80:20 to 50:50."

- The Application Portfolio Management Landscape — Combine Process And Tools To Tame The Beast Phil Murphy, Forrester Research, Inc. April 15, 2011

# Solving the problems requires a different approach

"We can't solve problems by using the same kind of thinking we used when we created them."

Albert Einstein

Addressing the problem requires an asset (application) portfolio approach to complement the traditional project portfolio approach

### **Project Portfolio Management**

- Commonly used in mature companies
- Provides executives (only)
  - Control over 20% of this year's budget
  - Ability to affect this year's project proposals

# **Application Portfolio Management**

- Used effectively by only a few leaders
- Provides executives
  - Multi-year control over 80% of the budget
  - Ability to generate new project proposals such as structural changes to address problems

### Many companies have the 80/20 rule wrong...

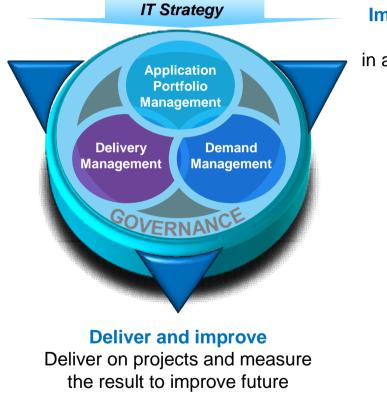

# Simplify IT to drive innovation and business agility Governance and collaborative decision making

#### Increase strategic spend

Consolidate applications to reduce maintenance and operations cost and shift funds to innovation

Improve business agility **Reinvest savings** in application modernization

> and effectively manage demand

decision making

# Why APM right now? What is **APM**? How are customers adopting it? APM in action Final thoughts

# **A definition of Application Portfolio Management**

Application portfolio management (APM) is a repeating process using information and analytics that produces objective and transparent decisions around investing, consolidating, modernizing, or replacing applications.

#### **Benefits:**

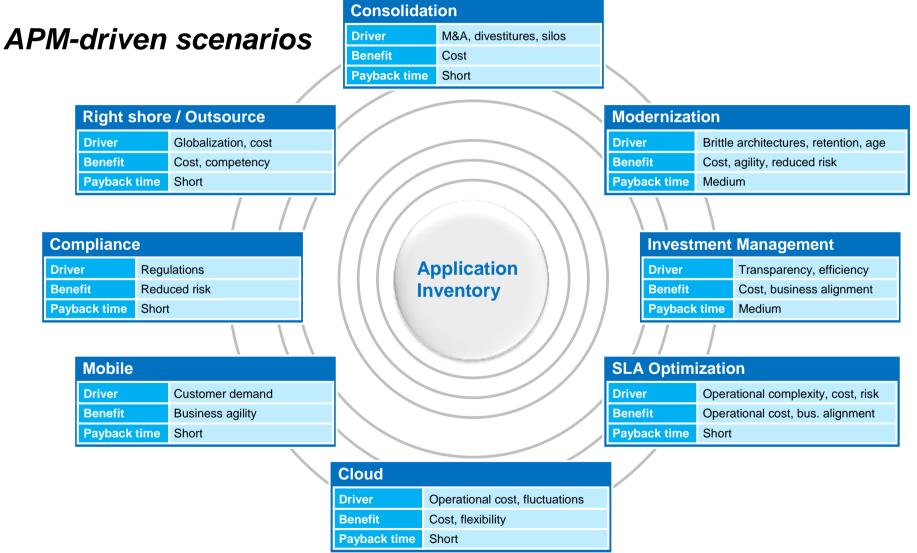

- Align the application portfolio with business strategies
- Reduce costs and optimize value
- Increase speed-to-deployment and speed-to-market
- Reduce risk associated with technology or resources
- Implement shared services

"Making IT resource consumption transparent and understandable to business leaders enables healthy business discussions around how to shift resources to where they will do the most good for the whole business."

- Define "Application" Based On Your Content To Avoid False Starts In Your Rationalization Efforts, Forrester Research, Inc., January 26, 2011

# **IT** optimization business outcomes

# Why APM right now? What is APM? How are customers adopting it? APM in action Final thoughts

**Measuring the Total Economic Impact** 

Forrester Consulting interviewed four customers to establish a financial model (3-year, risk-adjusted ROI) for a representative organization using the IBM Rational Integrated Solution for Application Portfolio Management.

ROI	Payback	Total costs	Total benefits	Net present
	period	(PV)	(PV)	value (NPV)
101%	13 months	(\$1,551,280)	\$3,507,306	\$1,956,026

#### **Benefits**

- Improved process efficiency business and IT. Reduced time and effort to collect, manage, and report on the application environment.
- Reduced risk/improved allocation of capital. Improved transparency around the application environment, increasing the likelihood that mission-critical applications are adequately funded.
- Improved Time-To-Delivery On Application Initiatives. Reduced time to decide on, and implement required changes.
- Reduced cost. Lower maintenance and operations cost through consolidation and rationalization. (Not quantified in report, nor included in the above model.)

How to prioritize spend on maintenance and rationalization

# Financial institution in Europe

Phased rollout of governance processes

# **Simplify IT to improve business agility**

#### Challenge

#### Cost

 Too much money spent on maintenance and operation

#### Solution

- Established application inventory in first month
- Assessed business value versus cost and risk
- Reduced number of local and non-strategic applications

#### Results

- ✓ Reduced number of applications by 45% in 18 months
- ✓ Reduced money spent on keeping lights on from 85% to 50%

#### Challenge Business agility

- IT not reactive to business needs
- Business had low confidence in IT's ability to add value

#### Solution

- Established demand management process
- Used tools for improved business and IT collaboration
- Re-invested savings from keeping lights on into innovation

#### Results

- ✓ Reduced response time to business change request from 200 to 14 days
- ✓Improved trust between Business and IT
- ✓ IT is now viewed as an enabler of innovation, rather than as a cost center

# A global conglomerate

#### Read the full case study

# Rationalize and optimize to align with the business

#### Challenge Solution Results Complexity Built application inventory in ✓ Reduced number of applications Unclear what two months, replacing previously by 75% in 18 month applications exists scattered information and their value Enabled portfolio management and EA teams to collaborate Challenge Solution Results **Business** Assigned appropriate SLA level ✓ Reduced number of SLA levels alignment based on needs from 17 to 4 SLA's and application Streamlined organization to align ✓ Double digit reduction in operations cost support costs not with simplified SLA levels and smaller driven by business application portfolio justification and priorities

# Financial institution in North America

**APM** in action

Final thoughts

### Application Portfolio Management: Simplified workflow

# 

#### High level goals established

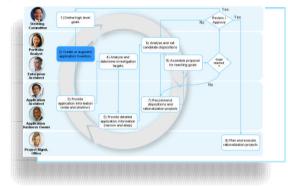

- Example: Reduce application costs by 20% by end of 2013
- Explicit targets for accomplishing goals are established
  - Example 1: Reduce maintenance spend by 15% by end of next quarter
  - Example 2: Establish Goals for Decommissioning Applications, with the ability to track Plans and Actuals to those goals

° <b>%</b> ∙	14 III 🛛 🔆		💺 🧐 🔷 I 🗈 I	Planning	~

- Rapidly import inventory from existing spreadsheets
- Optionally leverage role-based Web interface for additional information entry

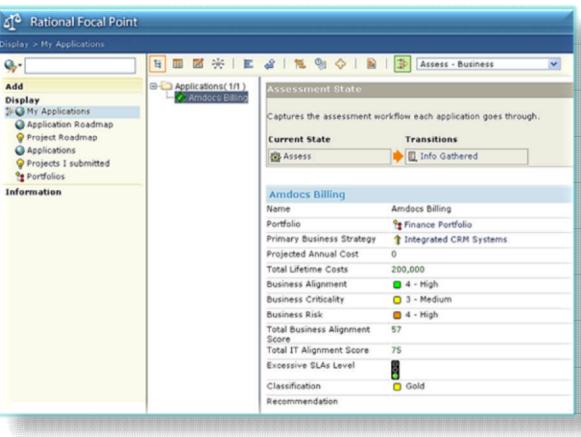

# 3) Provide application information (wide and shallow)

Application Architect Application Business Owner

- Web-based entry through role-based views
- Provide filters to make data entry trivial
- Increase data quality through choice selections and built in quality assurance steps

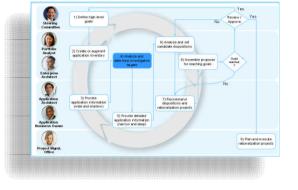

4) Analyze and determine investigation targets Identify applications to be further investigated

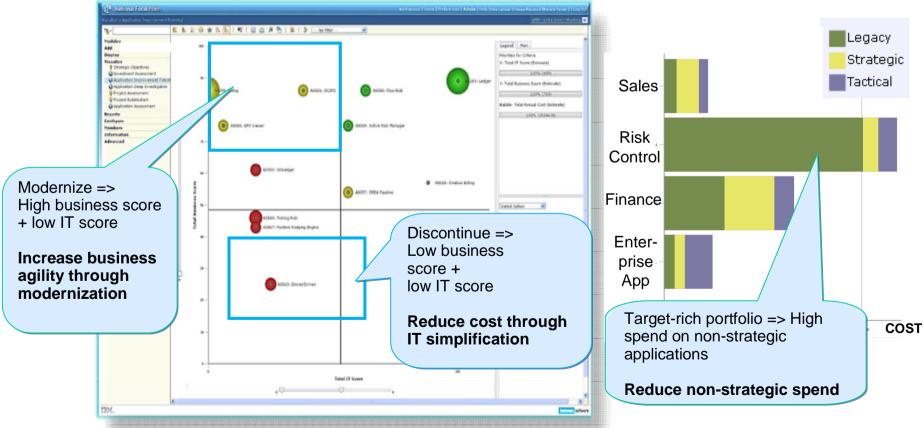

Portfolio

Analyst

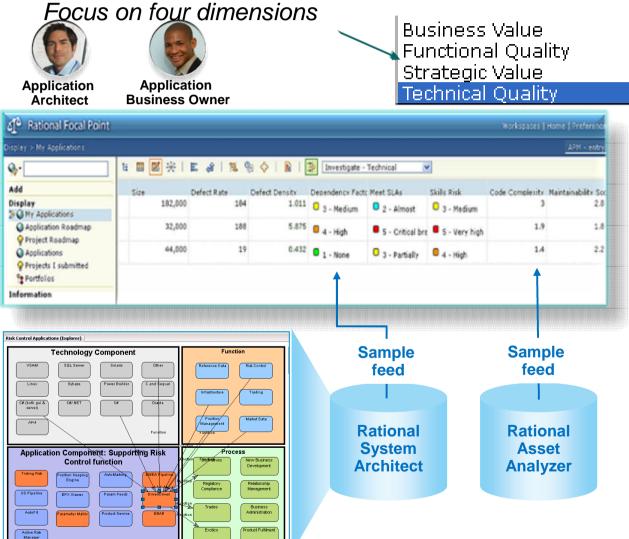

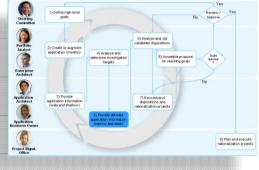

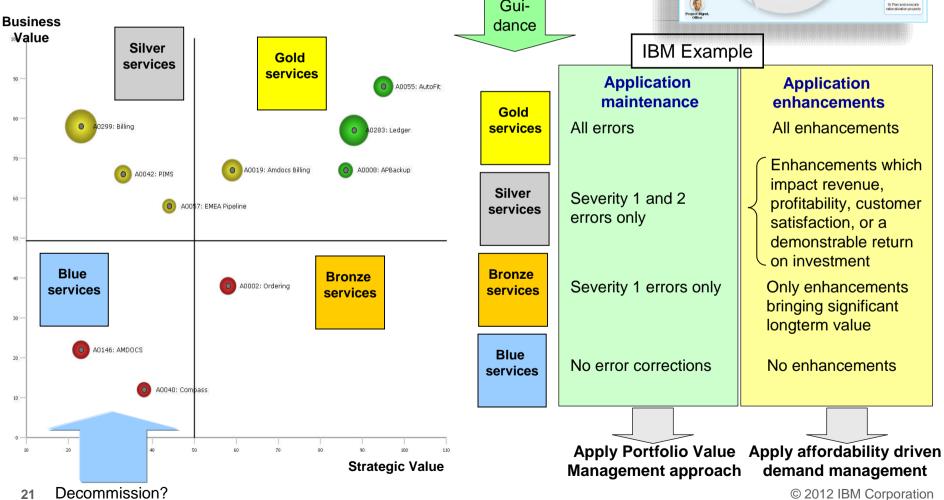

# 5) Provide detailed application information

- Web-based and role based information gathering
- May optionally be informed by application analysis tools, such as IBM Rational Asset Analyzer or CAST Application Intelligence Platform
- May optionally be informed by an Enterprise Architecture tool, such as IBM Rational System Architect

6) Analyze and set candidate dispositions Assess Business Value vs. Strategic Value to guide maintenance spend and dispositions

IBM.

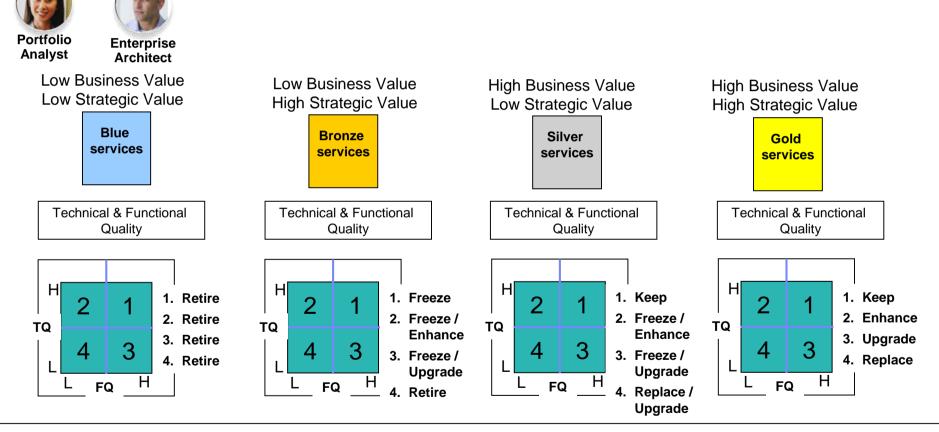

Goals reached

# 6) Analyze and set candidate dispositions

Assess Technical and Functional Quality to guide investments and dispositions

Most applications are candidates for retirements and should be frozen immediately. Most applications should be frozen. Consider replacement to more strategic applications. Newly introduced applications could be revalidated to stay as a target application. Most applications could be frozen temporarily - until a need to Upgrade or Enhance has been aggregated. Many applications are likely to be in your wanted portfolio and part of your target solution.

#### 6) Analyze and set candidate dispositions Propose disposition and understand savings potential

Disposition	Description	Potential % Savings based on industry benchmarks
Decommission (a.k.a. Retire)	Discontinue the application.	70% of maintenance and production infrastructure cost
Relocate	Evaluate and select alternate sourcing for application hosting, maintenance and/or development.	40% of labor (enhancement and maintenance) + 3% of production infrastructure cost
Reprioritize	Reduce spend on maintenance or operations costs.	15% of maintenance labor
Replace	Replace current application(s) with new application / packaged application.	25% of total cost
Reduce (a.k.a. Consolidate)	Rationalize multiple applications with similar function into a single application.	60% of total cost
Enhance	Add additional functionality. Improve flexibility by using new principles, e.g. SOA, Web Services.	No change -????
Modernize (a.k.a. Rustproof)	Modernize application by upgrading technology and improving architecture.	15% of labor (enhancement and maintenance)
Retain	Keep as-is.	No change © 2012 IBM Corpor

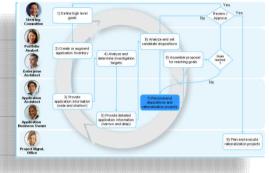

# 7) Recommend dispositions and projects Review and harden proposed dispositions

Application Architect

Application Business Owner

- Bring together key stakeholders of this applications, and review impact of proposed disposition
  - What is impact of a freeze?
  - If we replace the application with an ERP, what is the business impact?
  - What risks are associated with relocating this application?
  - Knowing the details about the application and business context, is there a more sensible disposition?
- For upgrades / modernizations => Conduct Feasibility Study
  - Drill down into details of the architecture and code base
  - Determine the appropriate modernization approach (re-factor, migrate, wrap, ...)
  - Understand costs, benefits, and risks

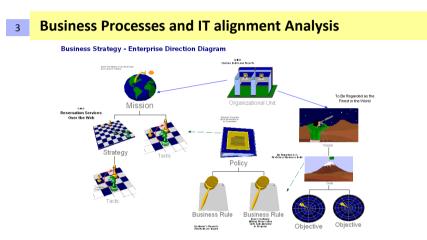

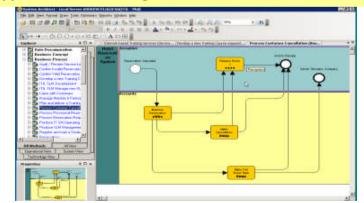

#### 7) Recommend dispositions and rationalization projects Conduct feasibility study

#### **Defect and Enhancement request Analysis**

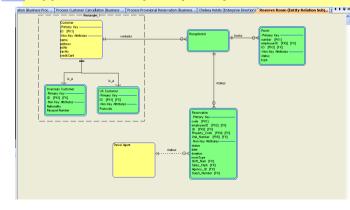

4 Application Refactoring and Enhancement

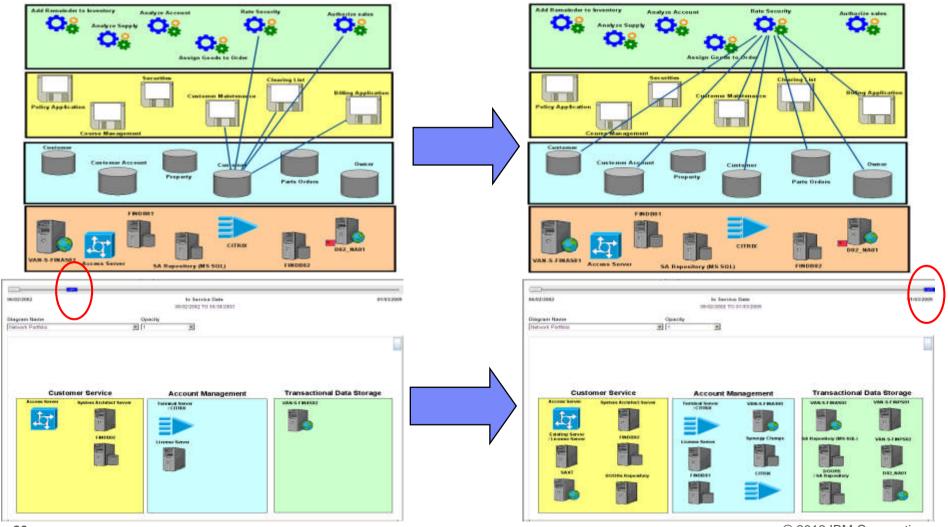

2 Application Complexity Analysis

## 7) Recommend dispositions and rationalization projects Define Future State architecture(s) Current to Proposed

7) Recommend dispositions and rationalization projects Produce project proposals for rationalization projects

 Link Future State architectures to project proposals

 Propose and establish business case for projects

#### Expected Cost: \$1.4 M Expected Benefits (accrued over 13 months after project completion: \$1.9 M Net Present Value (28 months)

#### 8) Assemble proposal for reaching goals Evaluate and prioritize rationalization projects

8) Assemble proposal for reaching goals Establish roadmap that enables goals to be met. Plan and approve for execution.

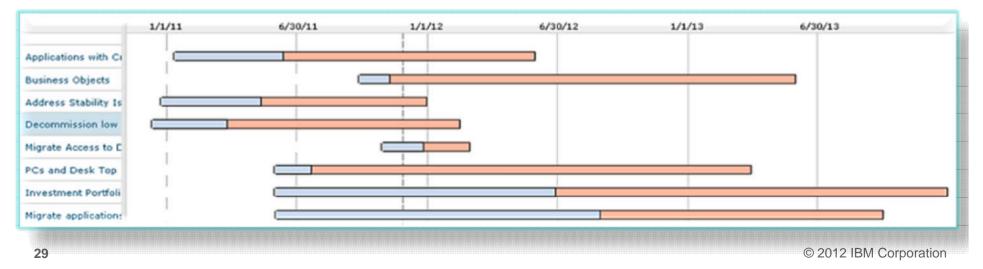

- Freeze 23 applications
  - Quarterly savings of \$870K

Steering Committee

Project Mgmt. Office

- 18 rationalization projects to be carried out
  - over next 2 years
  - Modernization of 4 applications deemed critical
  - Consolidating 12 applications
  - Decomissioning 6 applications
- Transaction cost of \$6.8M
- Expected savings by end of 2013: 22%
  - Beats goal of 20%

# **IBM CIO Office APM Experiences**

# Application reduction

- From 16,000 to 4500
- Targeting another 50% reduction by 2015

# Benefits

- \$1,5 Billion dollar estimated savings as a result of application and data center consolidation
- Of applications classified as "Blue", an estimated 95% savings in maintenance (due to consolidation and freeze of maintenance dollars)
- SLAs now vary based on objective business criteria
- Re-engineered applications defects down 58% and maintenance costs down 20%
- Separated low value work and applied strict governance and controls

#### Ongoing process

- APM never ends, this is the 3<sup>rd</sup> time we cut application count by 50% or more....
- Many other improvements besides IT cost reduction, such as business process efficiencies gained from global processes for a global company
- For more info, see Computerworld article: <u>http://www.computerworld.com/s/article/9226430/IBM\_on\_path\_to\_cut\_internal\_apps\_by\_85\_</u>

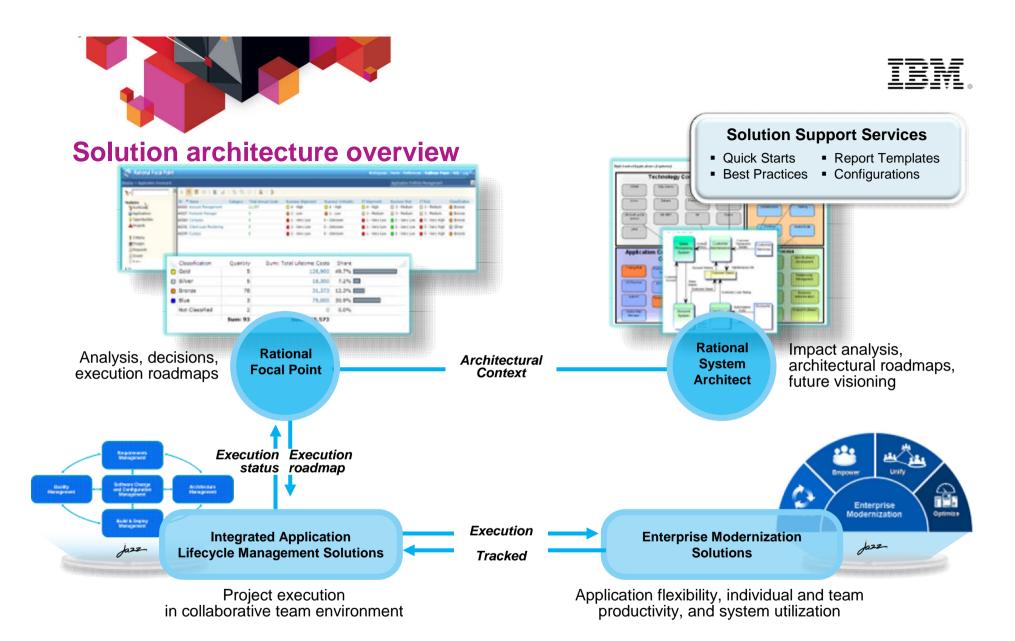

# Why APM right now?

What is APM?

How are customers adopting it?

APM in action

**Final thoughts** 

#### APM decisions and plans are executed and tracked in solutions for Application Lifecycle Management and Enterprise Modernization

#### Usage scenarios across multiple adoption paths

#### **Portfolio-lead APM**

- Focus areas:
  - APM as a governance process supported by analytics
  - Collaborative decision making
  - Establishing project roadmaps
- Solution:
  - Rational Focal Point: Analyze application portfolio, identify candidate decisions, prioritize options, and propose and plan projects
  - Rational System Architect: Optionally use to investigate candidate decisions identified in Rational Focal Point
- When appropriate:
  - Currently using spreadsheets or initiative driven without mandating the rigor of a mature enterprise architecture practice

#### **Enterprise Architecture-lead APM**

#### Focus areas:

- Understanding the enterprise context of applications
- Evaluating architectural alternatives
- Establishing architectural roadmaps
- Solution:
  - Rational System Architect: Understand the enterprise architecture, define solution alternatives, and produce architectural roadmaps
  - Rational Focal Point: Prioritize solution alternatives identified in System Architect and propose and plan projects
- When appropriate:
  - Mature enterprise architecture practice in place or is being established

#### These two starting points often evolve to a model benefiting from both perspectives

#### How to get started: Two options

Moving towards increased strategic spend and improved business agility

#### 1/2-day APM Executive Workshop

- What are your desired outcomes from the APM effort?
- What decisions do you need to support?
- What information and analytics are needed to support those decisions?
- What roles are involved in the information gathering and decision making?

#### 1-day Proof of Technology

- Instructor-led lab exercises
- Hands-on walkthrough leveraging sample application inventory
- Walk through several end-to-end Application Portfolio Management scenarios
