

The Value of System z – Total Cost of Ownership Update

Ray Jones WW Vice President, z Software

Ray Jones WW Vice President, z Software

Let's Break Down the Elements of Cost

Total Cost of Ownership =

Hardware/Maintenance

+ IBM Software

+ Environmentals

+ Labor

+ required Quality-of-Service

(Availability, Security, Disaster/Recovery...)

+ other Elements

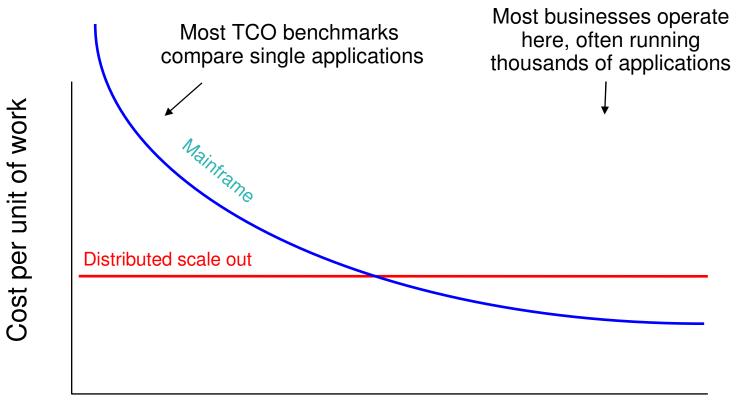

(Chargeback)

The total cost requires a total picture of your I/T assets and expenses

Mainframe Cost/Unit of Work Decreases as Workload Increases

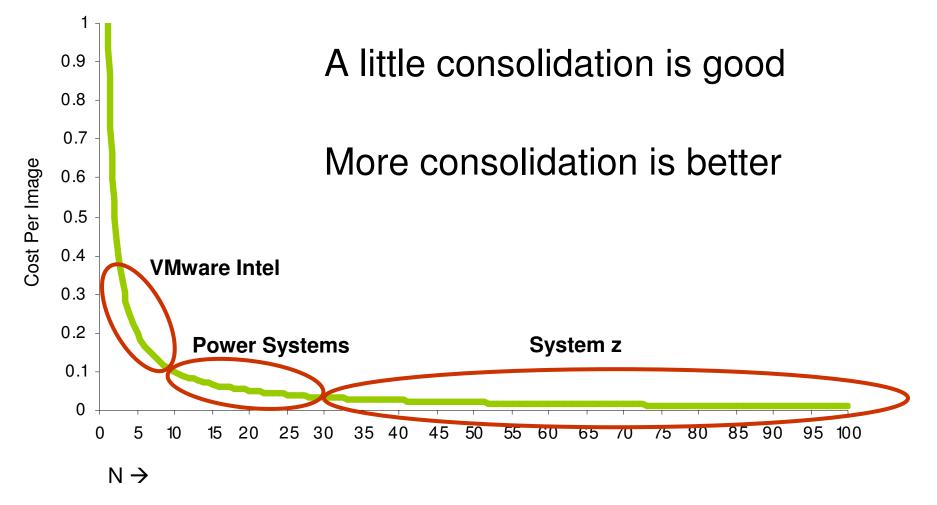

Data Center Workload

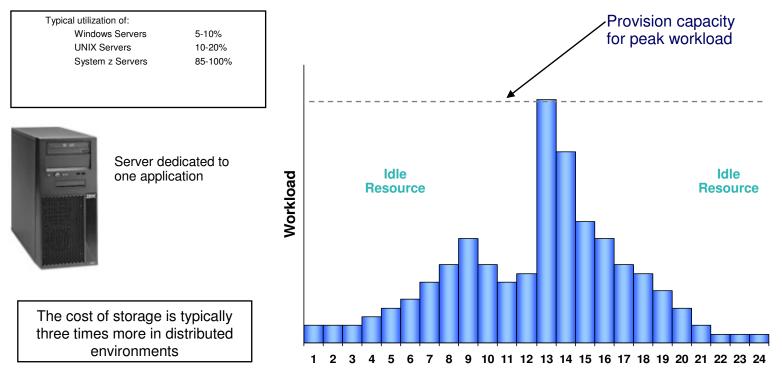

Observed Consolidation Ratios

Utilization of Distributed Servers & Storage

Storage Allocation

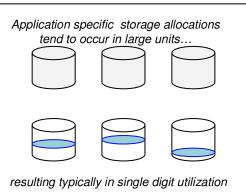

- Application-specific resulting in over-allocations
- Fine grained storage allocation mechanisms characteristic of mainframe storage are uncommon in distributed environments.

Storage Utilization

- Single digit utilization for distributed environments is not uncommon
- Storage utilization of 80% + is typical for mainframe

Storage Management

- Data disaster recovery, synchronization, and transfer requirements add complexity and cost

What Is A Typical Value Of Sigma?

IBM Survey Of Workload Variability In 3200 Servers

Type Of Workload	Average Utilization	Peak Utilization	Sigma
Infrastructure	6%	35%	2.5 * Mean
Web Server	4%	24%	2.5 * Mean
Application	4%	34%	3.75 * Mean
Database	5%	37%	3.25 * Mean
Terminal	6%	45%	3.25 * Mean
E-Mail	4%	34%	3.75 * Mean

IBM System x[™] Servers and VMware Virtual Machine Sizing Guide

Legacy workloads on XEON 2.5-2.8GHz Servers

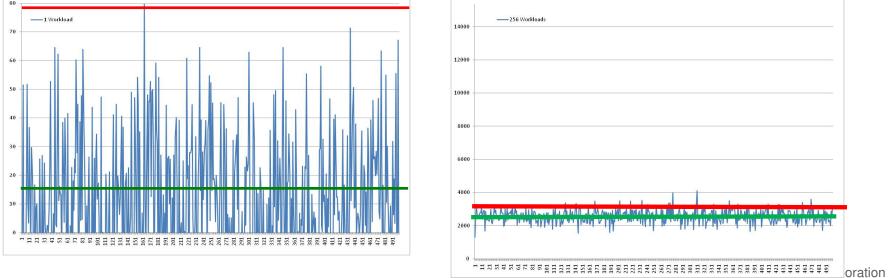

Normal probability distribution

New Workload Scenarios – Beware Benchmarks

Stress test benchmarks have no variability!

- They drive the system under test to100% utilization with no variation
- Comparing mean throughputs at 100% utilization doesn't give a realistic view of the resources required for deployment

Running a new workload with variability Sigma=2.5*Mean requires processing capacity equal to **6 times the Mean** workload demand Adding a new workload to a pool of 256 existing workloads will require incremental processing capacity equal* to the **Mean** workload demand

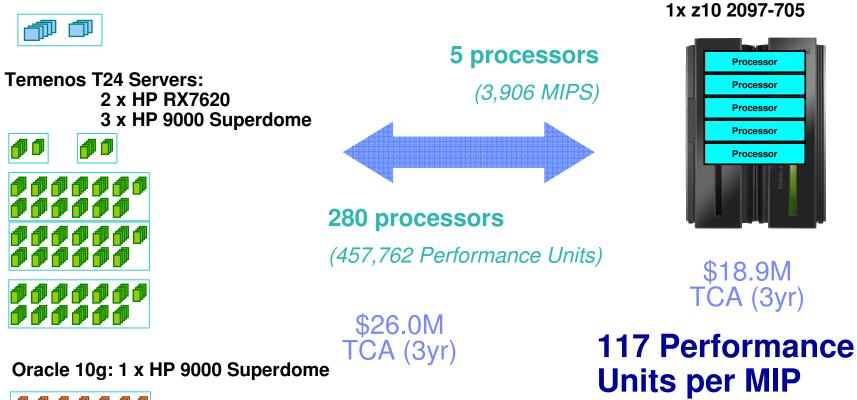

* If we add one more workload to a pool of 256 consolidated workloads the computing resource required for the pool goes up by 1.00047 * Mean 8

Online Injector: 1 x HP RX7620

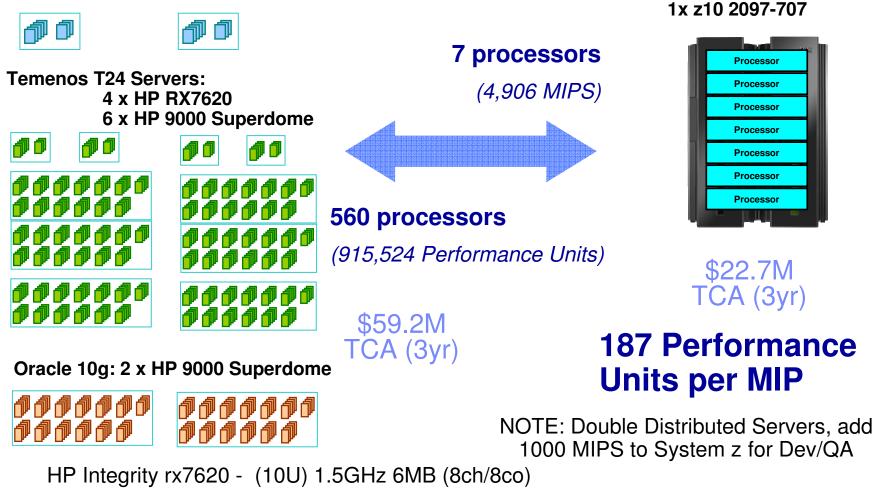

HP Integrity rx7620 - (10U) 1.5GHz 6MB (8ch/8co) HP 9000 Superdomes - 32W 1GHz 32MB (32ch/64co) **TCS BaNCS and DB2**

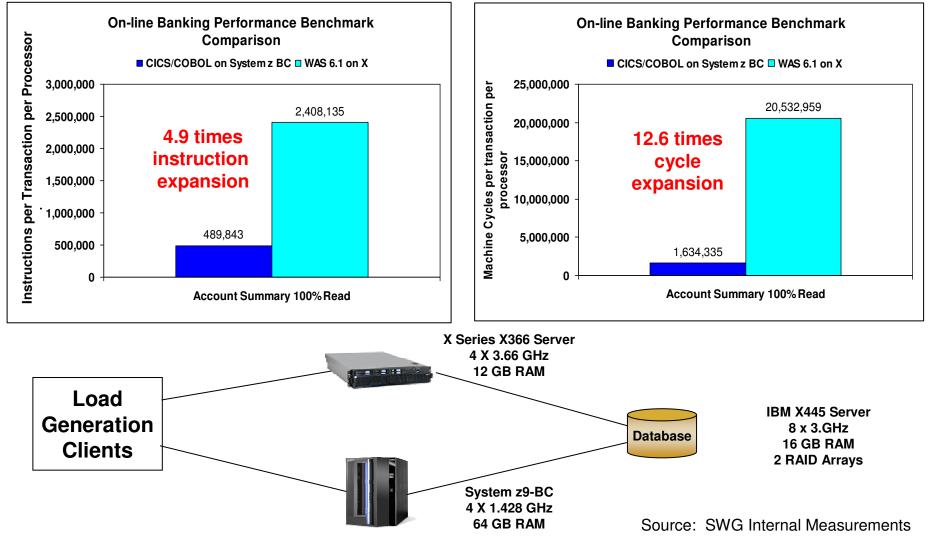

Online Injector: 2 x HP RX7620

HP 9000 Superdomes - 32W 1GHz 32MB (32ch/64co)

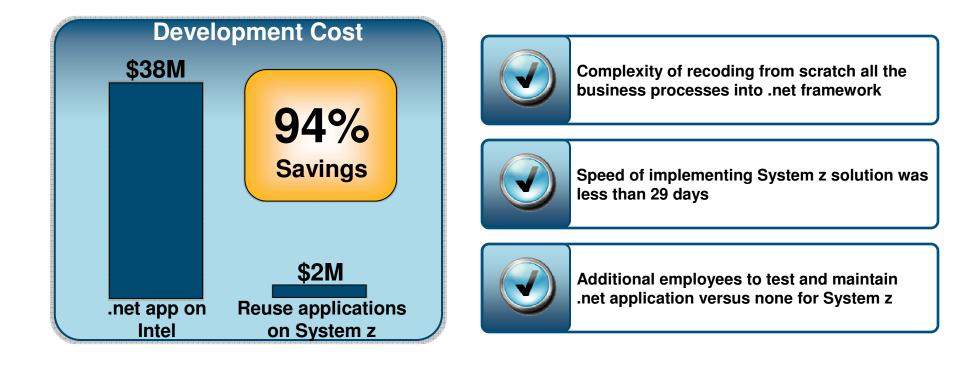

TCS BaNCS and DB2

Additional benefits

Improved application functionality

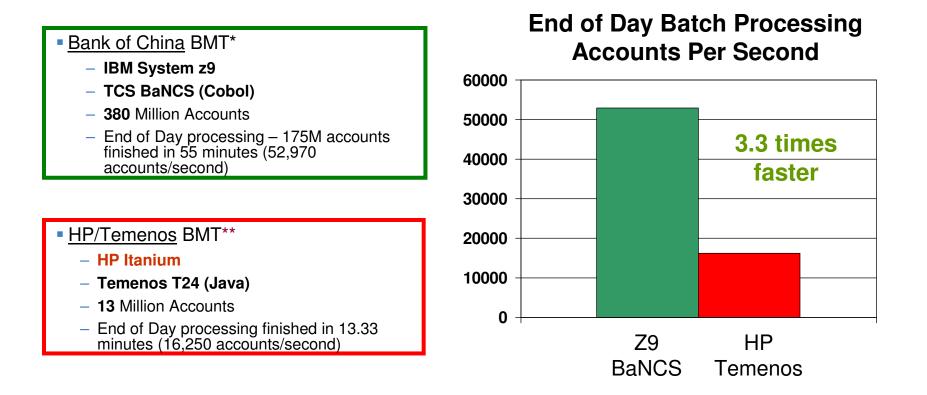

Faster time to market

Quick implementation and reduced risk

System z Batch Processing Performance

Storage Costs: DB2 Delivers More Storage Savings Than Oracle

DB2 for z/OS lowers TCO by reducing storage needed

- TPC-H Benchmark: DB2 compression of 62% vs 27% for Oracle RAC
- Storage savings with DB2 vs. Oracle for a 10 TB data base

	Oracle	DB2 for z/OS*
Storage System	HP XP24000 Storage	IBM System Storage DS8100
Overall database compression ratio (using TPC-H benchmark results)	27%	62%
For 10 TB uncompressed data storage needed	7.3 TB of HP Storage	3.8 TB of IBM Storage
Cost of storage (3 year TCA)	\$888,399 + \$37,560 x 3 = \$1,001,079	\$192,205 + \$7,992 x 2 ** = \$208,189
With compress	ion, storage for DB2 costs <u>79%</u>	less than for Oracle

*DB2 for z/OS achieves similar compression ratios to those of DB2 for LUW **IBM storage maintenance fee for the first year is included in the warranty

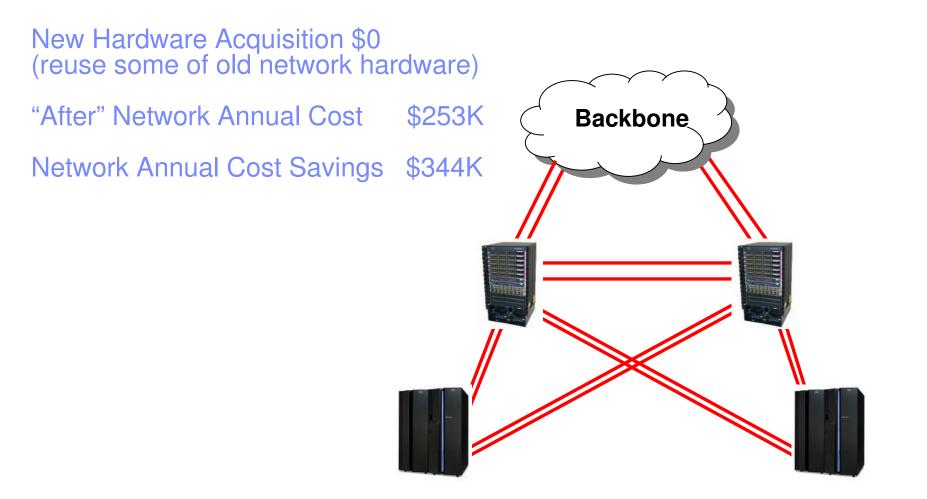

Case Study: Network Costs –Before Consolidation (483 Servers to 2 System z's)

Case Study: Network Costs – After Consolidation (483 Servers to 2 System z's)

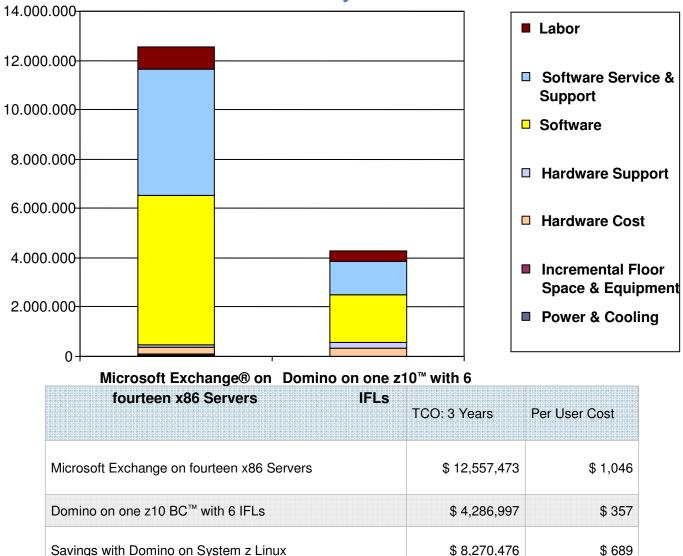

International Restaurant Chain Avoids High Cost Software

- Existing environment of 1600 MIPS included high cost ISV system management software
- Competitor's proposal was only a partial offload
 - Complete offload projected to cost 2.3x more
 - \$56M vs \$24M over 5 years
- System management software costs more in the offload case
 - Mainframe systems management
 - \$2.0M Stream per year (48 products, mostly third party)
 - Distributed systems management
 - \$2.6M Yearly Maintenance (26 products)
 - \$13.3M One Time Charge
- Better: Replace higher cost System z ISV software with lower cost IBM Software

Email, Calendaring, and Collaborative Application on System z is 1/3 the Cost of x86 and Saves \$8M+ over 3 years

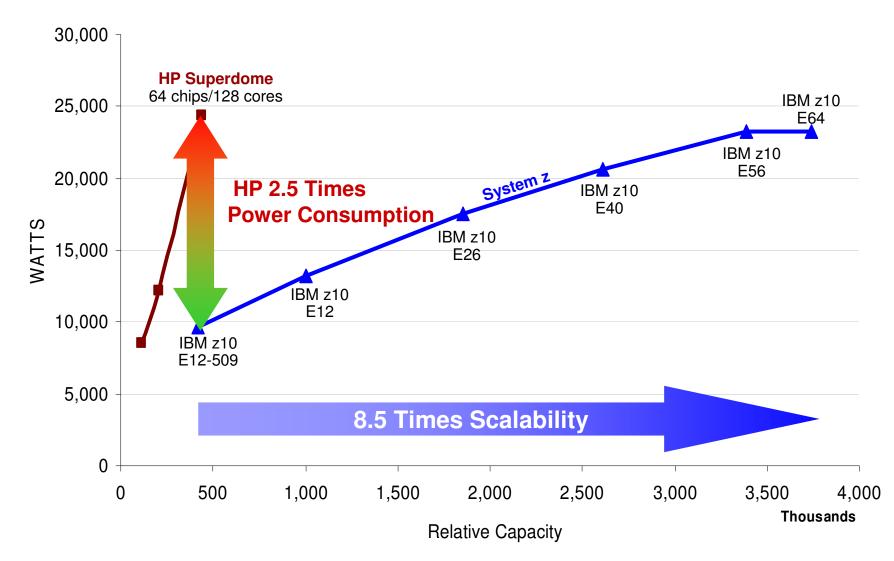

Assumes 12,000 users

z10 Consumes Less Power Than Superdome

- HP Itanium 2 Superdome 9050 (64ch/128co)* consumes a maximum of 24,392 watts
 - [24,392 X \$.10 X (24 X 365)]/1000 = \$21,367 per year for electricity
- Mainframe with similar computing capacity a System z10 704 machine with 2 I/O cages using 13.26 kW (rated)*
 - \$11,615 per year for electricity

Similar savings on cooling capacity

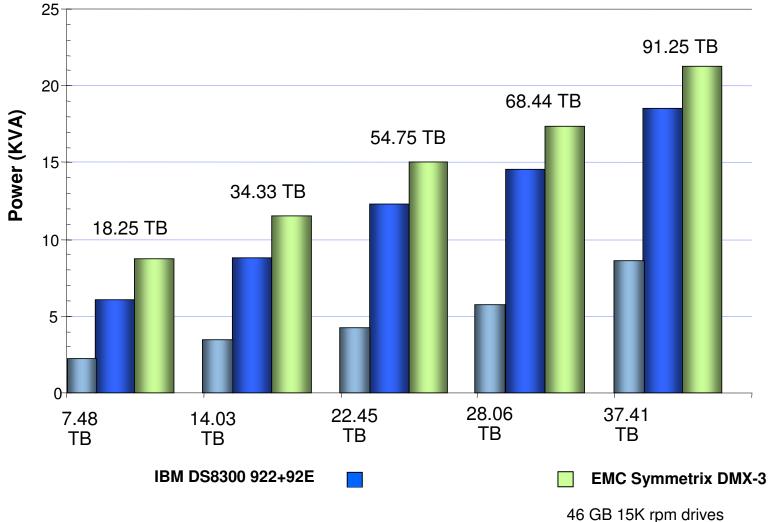

- Cost of cooling is about 60% additional
- Superdome total \$34,187 per year vs. Mainframe \$18,585
- Savings of mainframe power and cooling is \$15,602 per year

^{*} Performance equivalence determined by IBM TCO study

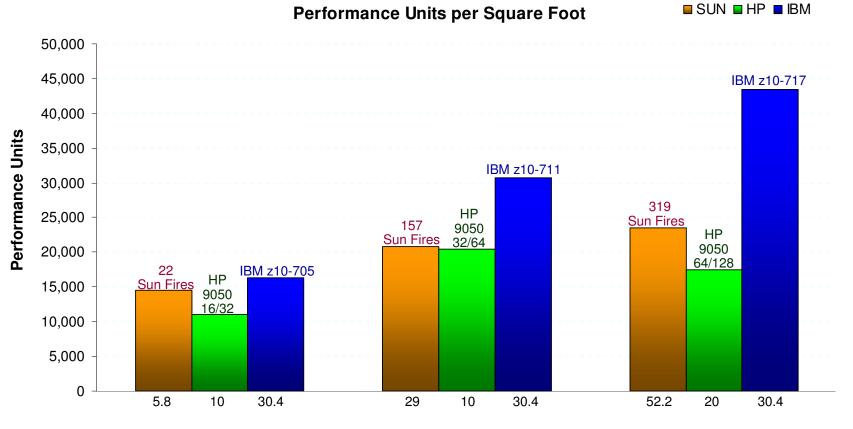

IBM DS8300 Power Consumption vs. EMC DMX-3 by Size

The Mainframe Also Delivers More Compute Power Per Footprint Unit

Approximate footprint (sq ft)

Based on 122 performance units per MIP Mainframe footprint remains constant

Customer Survey – How Many People to Manage Servers?

# NT Servers	# People	Ratio (s/p)
1123	68	16.5
228	20	14.4
671	51	13.1
700	65	11.5
154	18	8.5
431	61	7.1
1460	304	4.8
293	79	3.7
132	54	2.0

# UNIX Servers	# People	Ratio (s/p)
706	99	7.1
273	52	5.2
69	15	4.6
187	56	3.3
170	51	3.3
85	28	3.0
82	32	2.6
349	134	2.6
117	50	2.3
52	52	1.0

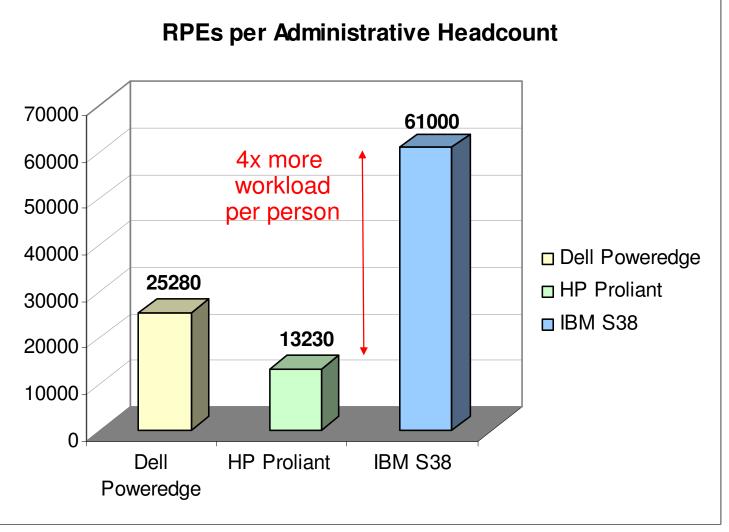

Mainframe administration productivity surveys range 167-625 MIPS per headcount (500 is typical), so...

Source: IBM Scorpion Customer Studies NOTE: Figures for total administration cost

Manage More Workload Per Headcount

Understand The Cost Components

Annual Operations Cost Per Server (Averaged over 3917 Distributed Servers)

Power	\$731
Floor Space	\$987
Annual Server Maintenance	\$777
Annual connectivity Maintenance	\$213
Annual Disk Maintenance	\$203
Annual Software support	\$10,153
Annual Enterprise Network	\$1,024
Annual Sysadmin	\$20,359
Total Annual Costs	\$34,447

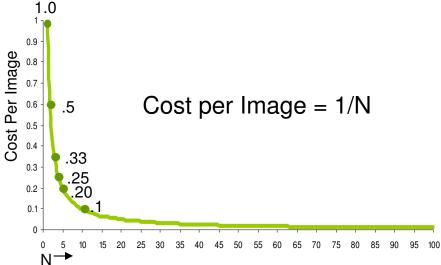

The largest cost component was labor for administration 7.8 servers per headcount @ \$159,800/yr/headcount

Source: IBM internal study

How Does Consolidation Reduce Costs?

- Costs shared by all "N" consolidated images
 - Hardware
 - Software
 - Power
 - Floor Space
 - Local Network Connectivity
- Costs not shared by consolidated images
 - Migration cost per image
 - Off premise network cost
 - Labor cost per image

Fixed cost per image

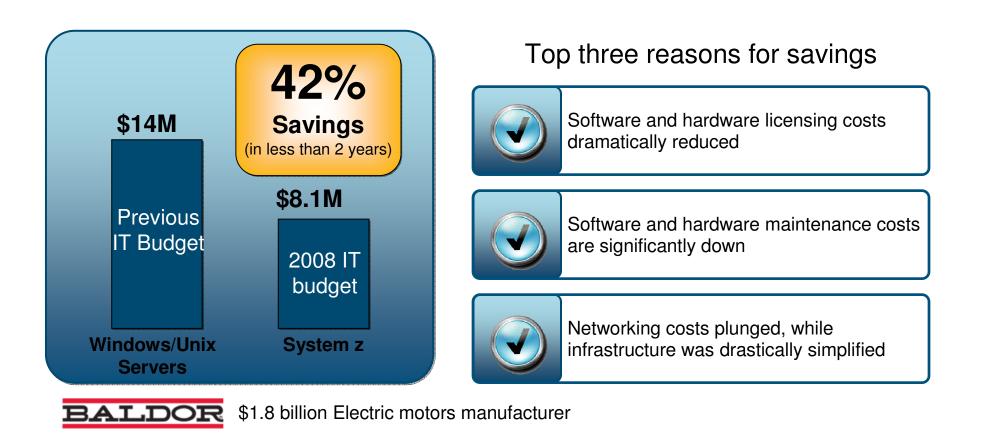

Fixed cost per image, but typically less than unconsolidated labor cost

The more workloads you can consolidate, the lower the cost per image

Optimize deployment of applications and data

Deploying SAP database and application servers

Expected Benefits Realized: Availability and Performance The System z decision was driven by expected benefits:

- Reduced complexity
- High availability
- Ease of maintenance
- Dynamic Workload
- Good consistent application response time (SAP)
- zLinux for rich toolset, ease of use

Additional Benefits Realized: Significant Cost Savings

- +Reduced IT budget by 42% in less than 2 years
- +Reduced floor space by 70%
- +Reduced software and hardware maintenance by more than 50%
- +Reduced power consumption by more than 60%
- +Reduced total TCO from 2% of sales to below 1% and realized 1 year ahead of schedule

Key Points:

Mainframe Costs	Distributed Costs
The cost of running incremental workload on the mainframe goes down as the total workload grows	The cost of running additional workload on distributed servers goes up more linearly
 Labor costs hold steady as workload grows 	 Labor is now the highest cost element in distributed environments Administrative staff costs increase in proportion to the number of servers
 IBM pricing policies designed to favor the addition of more workload 	 New workload requires additional servers and licenses
 Highly Efficient Power and Cooling – Small Footprint 	 Energy and Space cost is more linear
 Lower software costs per transaction as workload grows – and PRA can lower ISV tool costs 	 Cost of software licenses is more linear
 High Availability and Security Translate into low cost 	 Fractionally less Availability and Security can drive Significant downstream costs
Customers have learned that mainframes deliver economies of scale, especially as the workload grows	Result – scale out strategies do not deliver equivalent economies of scale as the workload grows

This pricing discussion uses published list prices

Thank You!

IBM Software Price Per Transaction is Going Down
