(1) Please check the eligible processor technology list for specific processors supported in the Sub-capacity offering <http://www-01.ibm.com/software/lotus/passportadvantage/subcaplicensing.html>

(2) Date from which the Virtualization technology / OS are eligible for sub-capacity licensing

(3) Indicates the earliest Version Release that supports the Virtualization technology / OS . This refers only to the ILMT support of a virtualization technology.

For other IBM Programs support of a virtualization technology, please consult the Program announcement letter or contact your sales representative

(6) Mobility: The movement of an active Partition or Virtual Machine (VM) between physical servers, where the VM or Partition is not running in two servers simultaneously.

(7) For eligible technologies not supported by ILMT you must refer to and use the rules for 'Manual Calculation' of Virtualization Capacity. These rules can be found at http://www-01.ibm.com/software/lotus/passportadvantage/Counting_Software_licenses_using_specific_virtualization_technologies.html

(8) When Sub-capacity eligibility is no longer available because either the Virtualization Technology or the Operating System version in use is no longer supported by its manufacturer, you have up to 180 days to move to an Eligible Virtualization Environment.

(9) ILMT full capacity PVU values will need to be adjusted upward manually for the number of activated cores on the server

(10) Hardware environment must use SMBIOS 2.5 or higher, use with bare metal OS only. Note SMBIOS 2.5 or higher supports both legacy BIOS and UEFI standards.

(11) When either BIOS, factory deconfiguration or HP iCAP settings are used to reduce the capacity of a server, ILMT full capacity PVU values must be adjusted upward manually to include the deconfigured cores.

(12) Sub-capacity eligibility for IBM i Workload Groups is an Eligible Sub-capacity Product starting February 7, 2012 running on Power 7 processors

(13) Operating System Commands can not be mixed with other Eligible Virtualization Technologies and are supported only on bare metal

(15) The discovery is based on disconnected scans, a semi-automated procedure for collecting the data about the hardware and software inventory. No BigFix client available for ILMT version 9.x

(16) Single Server, Cluster, Mobility (VMware Vmotion), Support for operating system only. Solaris containers (including Zones) are not supported on VMware.
