Ključ do rešitev 2014

Misli prihodnost. Bodi sprememba.

Private Cloud Operational Excellence

Rick Skanron, IBM

What is Cloud Operational Excellence?

Manage

Kill

Empower your end-user with a selfservice delivery of infrastructure and software

Integrate deployed applications automatically to your management tools and processes

Accelerate application and middleware deployments through workload patterns and Chef recipes

Wind-down services within regulatory guidelines; release all resources in a timely and efficient manner

Client stories

"With one click in four minutes we can give the fully managed server to our customer. The history has been that when we create the new solution, we need to make sure the backups are up and running, secure, patched, monitored and it needed to go through five to six teams inside Enfo...With SCO, we can actually do it with one click in a matter of minutes." -- Juha Kukka, Enfo

Cloud Adoption Workshops

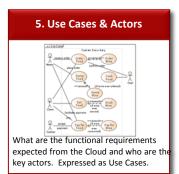

7. System Context

12-step process to defining the services and the attributes of the candidate Cloud services.

8. Architecture Overview

4. Candidate Cloud Services

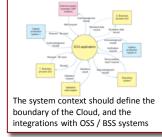

they align with Cloud computing.

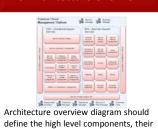

6. Non-Functional

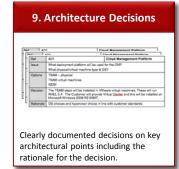

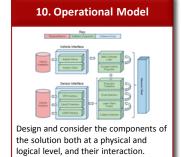

placement and topology, using CCRA.

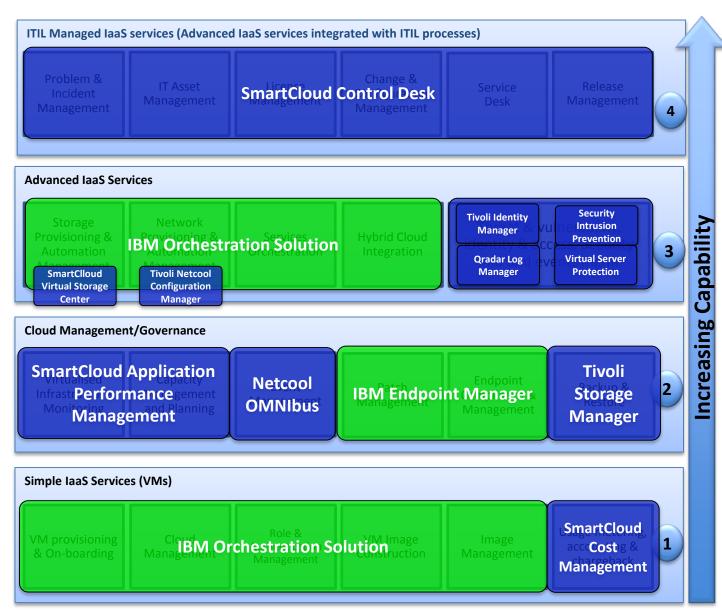

and overall delivery.

Advanced laaS services integrated with ITIL process

Allows to completely integrated the cloud world with the remaining part of the enterprise by including the cloud infrastructure and services in the enterprise ITIL processes.

Advanced laaS Services (VMs, Storage, Network, and combinations)

Allows creating a more sophisticated cloud infrastructure for delivery of complex and critical laaS services in highly demanding environments.

Cloud

Management/Governance

Complements first macro-pattern by adding management capabilities that allow to manage aspects like SLAs, security, resiliency, capacity planning, etc... for both the infrastructure that provides the cloud and the cloud service itself.

Simple laaS Services (VMs)

Entry point in the laaS cloud space. It allows to start building a multi-tenant cloud infrastructure and model delivering simple VMS (configured with proper network and storage) that covers 70 % of requests from business lines.

Quickstart services engagements

- IBM SWG services has 2 ideal services offerings to get ICO up and running quickly in your clients environment as follows:
 - laaS Get ICO installed and provisioning virtual machines on a single hypervisor in just 10 days
 - PaaS Get ICO installed and provisioning at least 2 'multi-tier' workloads on 2 environments, ie. Hypervisor + Public cloud in just 30 days
- These are ideal for smaller clients, service providers or anyone who needs quick time to value
