

## *Chapter 1*

# *Changes*

---

*Read this chapter if you are upgrading from a previous release of SoDA. It describes the changes made to SoDA between the SoDA 2.6.1 and SoDA 3.0.2 releases.*

## **General Changes**

---

This section describes the general changes made since the SoDA 2.6.1 release. (These changes are relevant to all SoDA users. They are either domain-independent, or are related to the File System or Frame domains which are available to all users.)

### **New Licensing**

SoDA 3.0.2 now uses Rational Suites licensing, a new license is required for SoDA 3.0.

### **Publishing Tool**

SoDA 3.0.2 includes a new revision of FrameMaker+SGML, version 5.5.6. SoDA 2.6.1 was shipped with version 5.1.1. Changes in version 5.5 have no impact on SoDA operation. For further information on functional changes in release 5.5, please refer to the FrameMaker+SGML release notes.

### **Upgrading Documents**

When you first open a version 5.1 FrameMaker+SGML under version 5.5, it will ask you if you want to convert the document to version 5.5 format. Once you have completed the conversion, you can generate those documents without error.
