

# IBM Rational RequisitePro Deployment Service

---

## Highlights

---

### *IBM Rational Deployment Services help you:*

- ***Enhance efficiency and predictability of deploying a new technology***
- ***Improve communication and teamwork***
- ***Accelerate self-sufficiency***
- ***Leverage IBM Rational's industry-leading software development experience***

### *Recommended for:*

- ***Project teams or organizations of any size that are newly adopting IBM Rational RequisitePro***
- ***Rational RequisitePro users who are expanding software configuration management with RequisitePro within their organization***

The IBM® Rational® RequisitePro® Deployment Service is a configurable service offering that enables you to deploy requirements management with Rational RequisitePro in the most efficient and effective manner to meet your team needs. Your Rational account team works in partnership with you to transfer RequisitePro technology and best practices in requirements management to your team.

This deployment service provides the guidance and tools necessary to address your unique situation while mitigating the risks associated with introducing new technology into your organization. Rational's many years of experience in successfully introducing tools and best practices are combined into a deployment service package that will help you take full advantage of your investment in Rational RequisitePro.

### **Clearly Defined Milestones and Deliverables**

The Rational RequisitePro Deployment Service follows a proven path to success and includes a comprehensive set of activities and deliverables addressing best practices in requirements management, RequisitePro environment setup, training, deployment, and a follow-up assessment.

### **Environment Setup**

Your IBM Rational technical representative will assess your project's hardware and network topology against Rational RequisitePro deployment requirements and provide recommendations to reduce project risk. The RequisitePro environment is then set up to suit the needs of your organization.

### **End-User Deployment**

A requirements management plan is defined for your organization in collaboration with your team leads. On-site Rational RequisitePro basic training is then provided to end-users in your development environment, using your requirements management plan. Ramp-up time is reduced and all end-users start off with the same knowledge.

### **Follow-Up Assessment**

Approximately 30 days after the initial deployment, your Rational technical representative will return to evaluate your project's initial success by reviewing the current state of the technology and process deployment. This evaluation identifies potential problems, and provides recommendations in order to avoid unnecessary project delays.
