Achieving CMM Level 2&3 with RUP

Agenda

- Overview of Software Capability Maturity Model (CMM) Levels 2 & 3
- Overview of the Rational Unified Process (RUP)
- How does RUP support CMM Level 2?
- How does RUP support CMM Level 3?
- Summary – Where are the Gaps?

About Me

- Ortia - Managing Consultant
 - SEI Approved CMM Lead Assessor
 - Almost 10 years experience of instituting Quality and Process Improvement programmes
 - Large & small scale programmes across multi-national companies

Ortia

Ortia provides a range of consulting and mentoring services including:

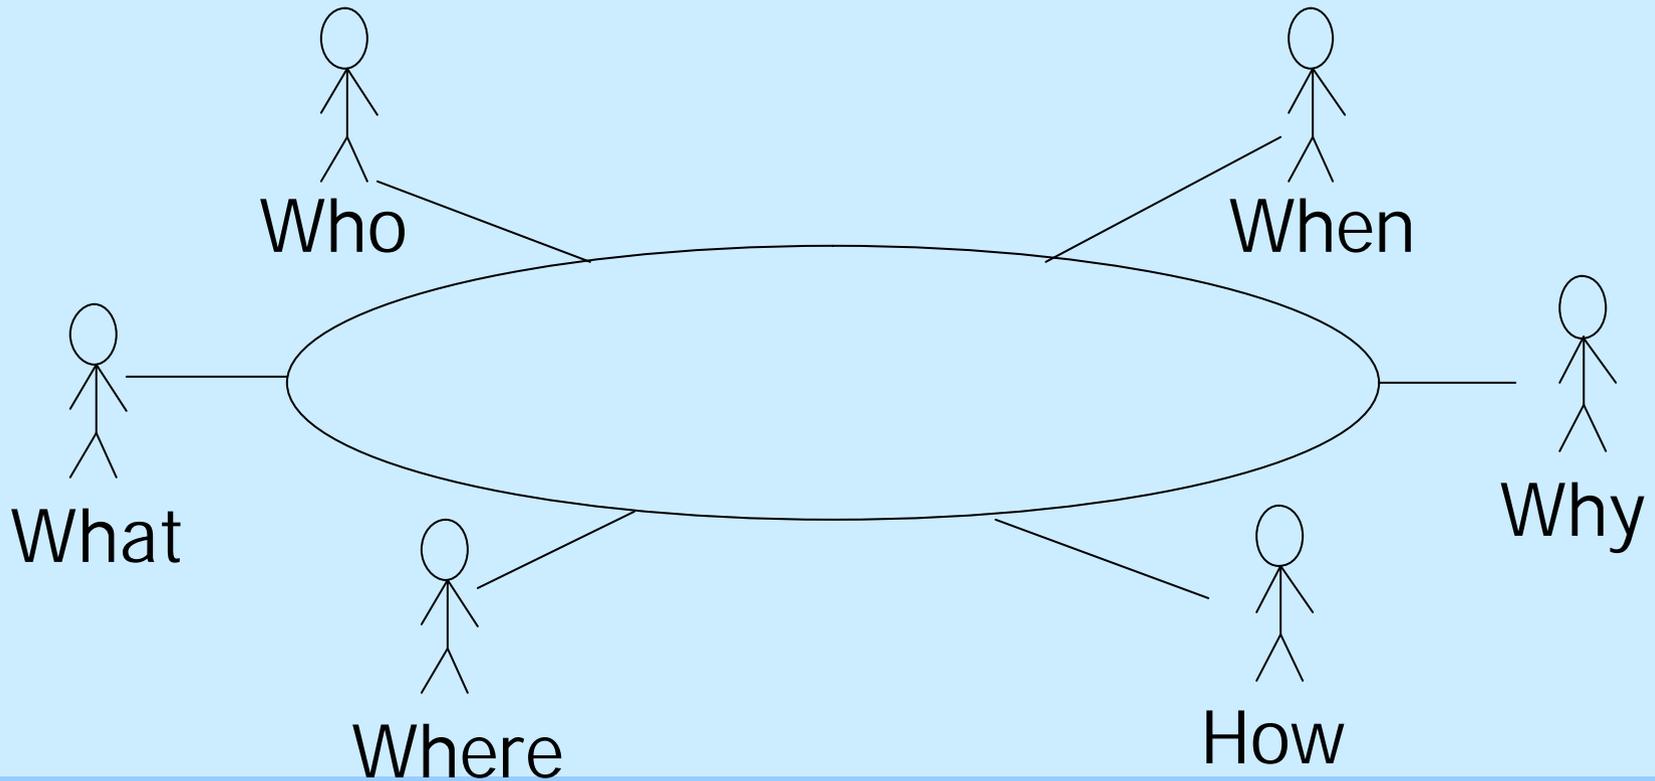

- RUP Implementation
- SEI Approved CMM Assessments
- Competence Management
- Process Improvement Programmes

Helping your business operate better, faster and cheaper through the practical application of management, finance and technology best practices

If you're doing SPI..know who your friends are!

- CMM is a journey..know who your friends are!!

Ortia

Can you reach CMM Level 3 using RUP alone?

No, but.....

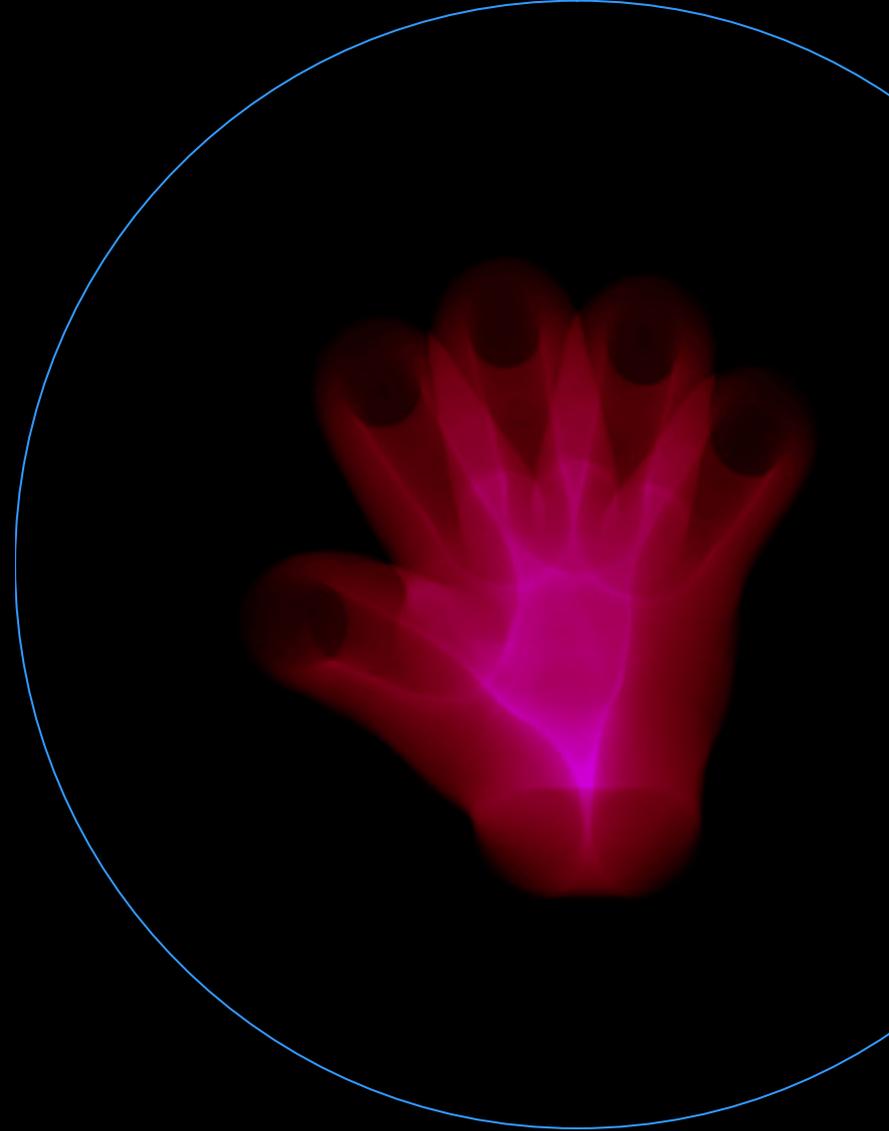

*RUP can provided a very
significant enabler*

*However it is deficient in
key areas*

Overview of the CMM Structure

Internal Structure of the Maturity Levels

Common Features of the CMM

Goals

Activities

- Establish Plans
- Perform Work
- Track Work
- Take Corrective Action

Institutionalisation – ensures actions become second nature

Policies and
senior
Management
Sponsorship

Commitment

Resources,
organisation
structure &
training

Ability

Determine status
and analyse
effectiveness

Measurement
& Analysis

Reviews & Audits
by Management
and SQA

Verification

Key Level 2 Characteristics

- Effective Software Project Management
- Project Management Procedures documented and followed
- Organisational Policies Guide Projects
- Previous Successful Practices Can be Repeated

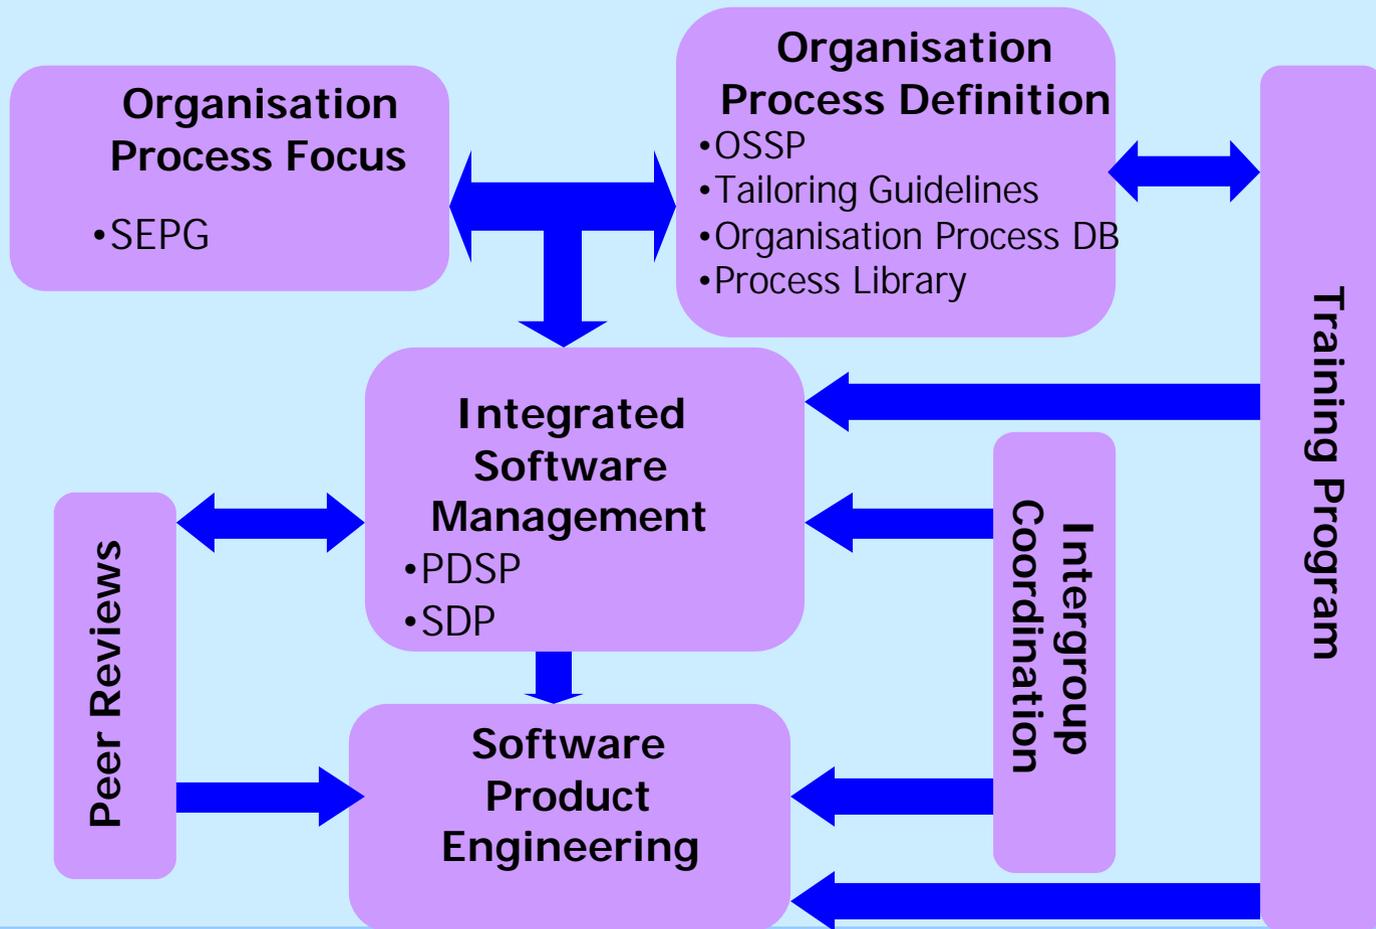

Key Level 3 Characteristics

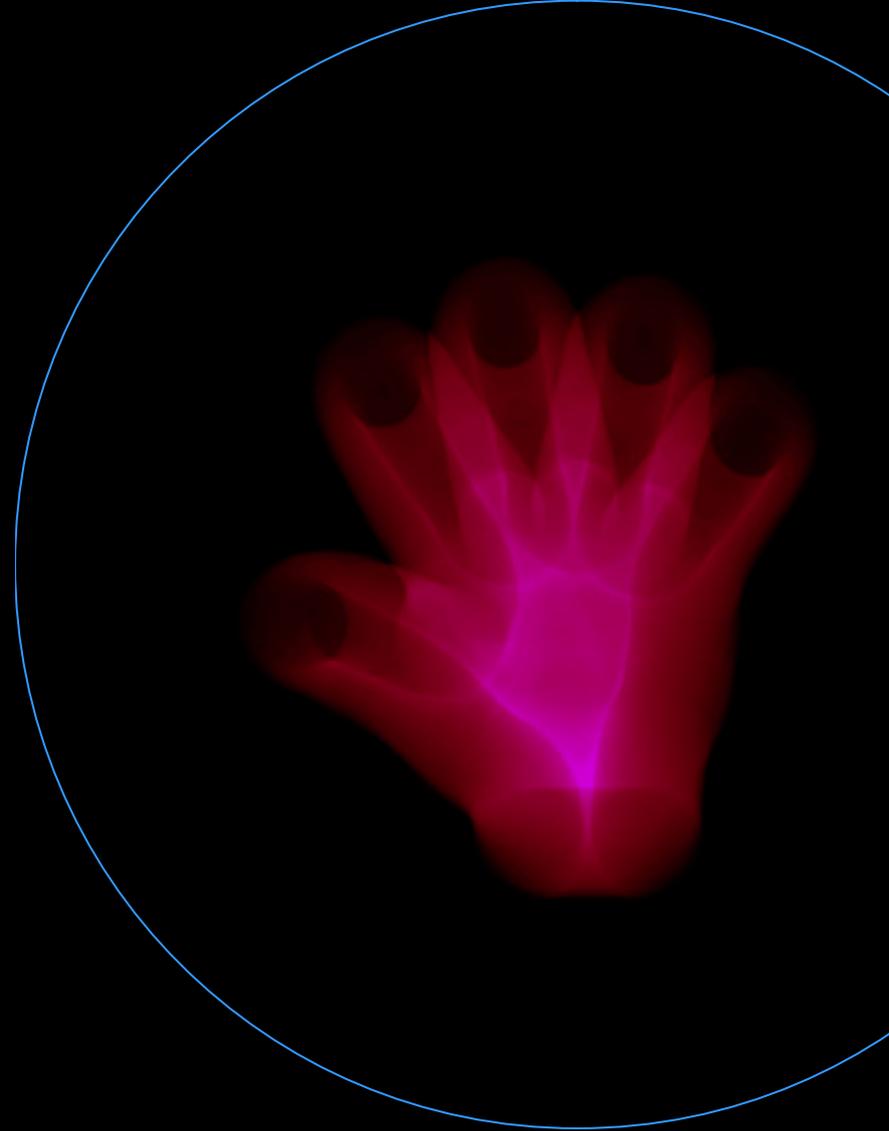

- Organisationally based approach to managing processes
- Communication and governance exists across projects
- Required staff competence is assured
- Standardisation provides individual flexibility
- Process changes driven by empirical data

CMM Level 3 KPAs

...make it happen

Overview of the RUP

What is RUP?

- A Body of Knowledge - a Repository of Best Practice
- The RUP is a Software Engineering Process Framework
 - Risk driven
 - An Iterative approach to Product Development
 - Use-Case driven
 - Visual approach to modelling processes
 - Identifies Roles, Activities, Artifacts and Workflows
 - i.e. Who, How, What and When

The CMM provides a route map (the what) for process improvement (project and organisation)

The RUP provides one variation of how to achieve it! (the how)

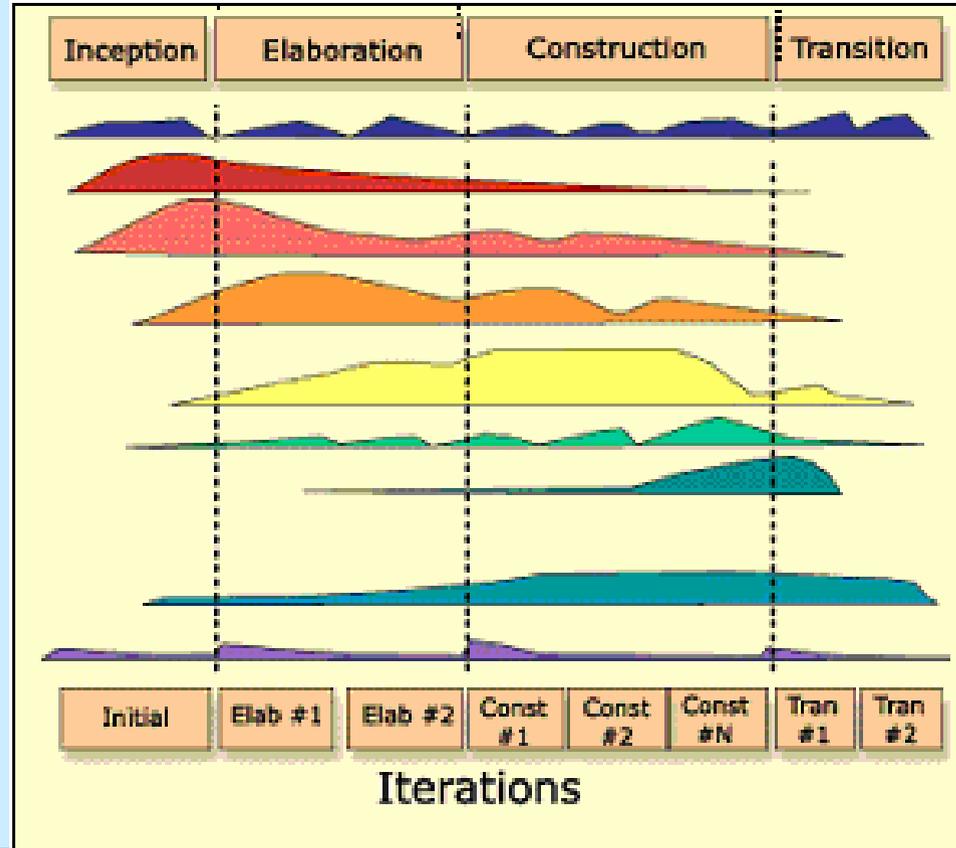

Key Principles of RUP

Disciplines

Project Management
Business Modelling
Requirements
Analysis & Design
Implementation
Test
Deployment
Configuration & Change Mgmt
Environment

Phases

Iterative Approach

- How do you eat an elephant?
- One Bite at a time!

- Breakdown waterfall-type approach into a succession of small iterations <careful>
- Each Iteration
 - Address some requirements (baseline)
 - Design to meet those requirements
 - Implement them
 - Validate it
- Addresses Risks Early
- Builds increasing product stability with each iteration

Goals of The Phases

- Inception
 - Understanding the overall requirements
 - Determining the scope of the development effort
- Elaboration
 - Focus is still on requirements
 - But some software design & implementation
 - Elaboration iterations produce executable production quality architecture
 - Mitigating risks
- Construction
 - Focus on design and implementation
 - Evolve architecture into first operational product
- Transition
 - Focus on ensuring the right level of quality
 - Produce and deliver the product

RUP Needs Tailoring!

- The RUP provides a framework - however, each individual process environment is slightly different
- “One size fits all” will fail!
- The RUP must be tailored to fit your individual situation
- “Out of the box” RUP assumes
 - Single Project development
 - This is a new product/greenfield development
 - The process is use case driven
- But Rational are working on this..(I hope!)

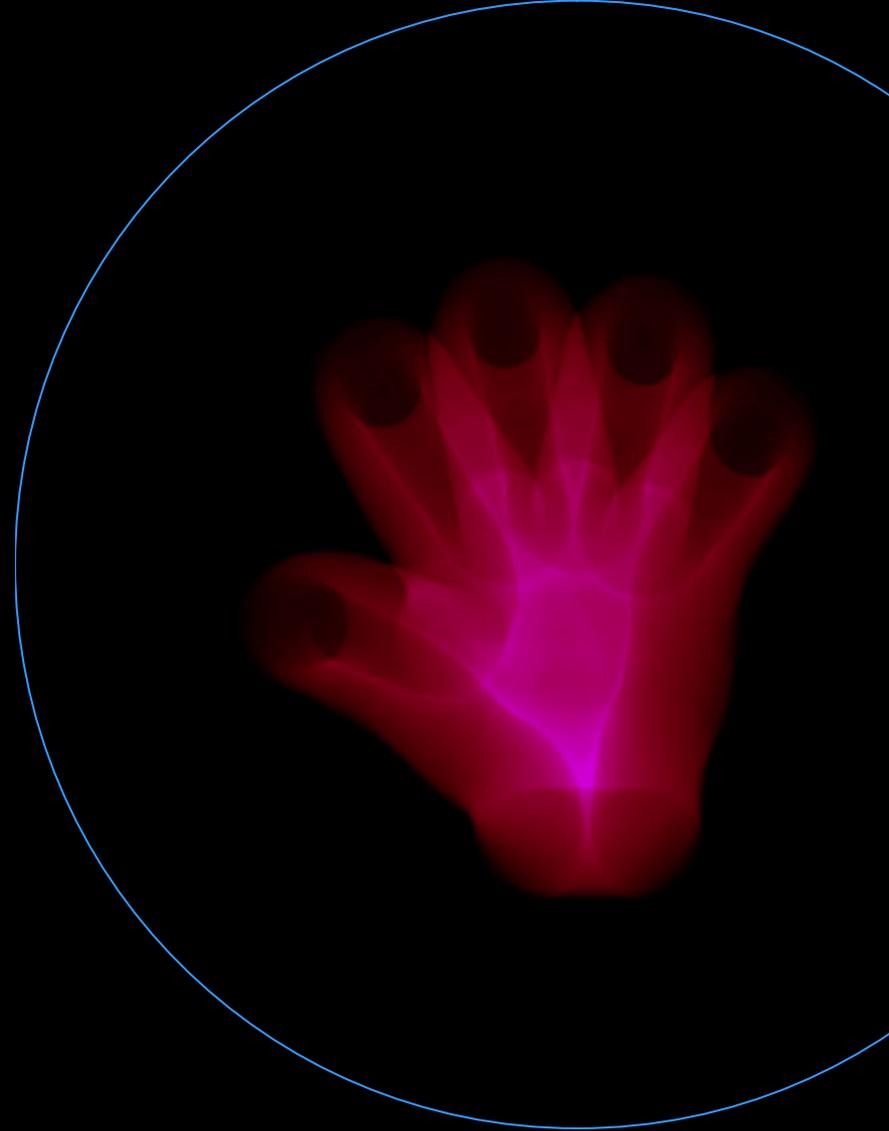

Caveat Emptor

This assessment has been completed assuming a complete implementation of the all core RUP activities

...make it happen

RUP Support for CMM Level 2

- Detailed workflows support many key practices
 - In particular in RM and SCM
- Iterative Approach gives better handle on managing requirements and plans as the project develops
- Use Cases with Scenarios provide;
 - A useful lever on size metrics
 - Indication of how requirements map to product functionality
- RUP provides templates for some important process artifacts
 - E.g. SDP & SCM Plan

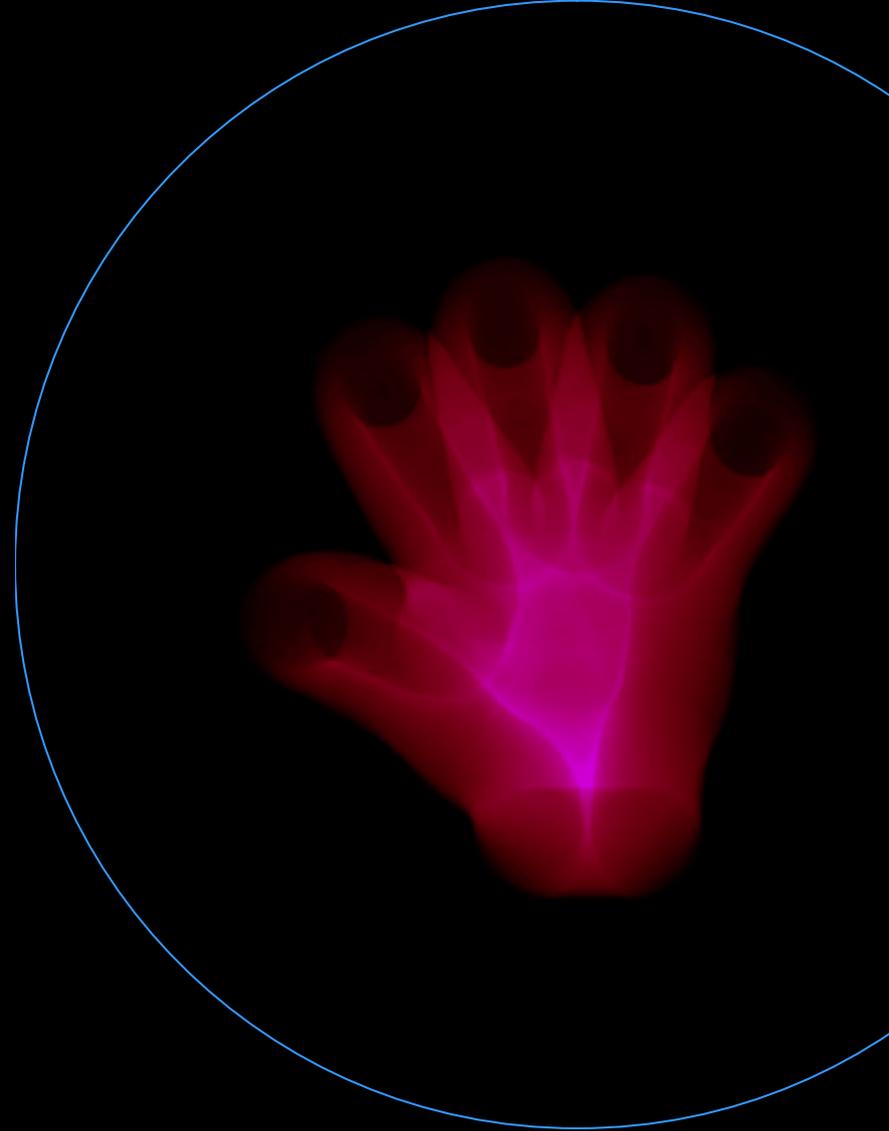

Gaps with RUP and CMM Level 2

- Software Quality Assurance
 - There are two distinct components of SQA
 - Product Verification
 - Process Verification
 - RUP does a lot on test, which is geared to Product Verification
 - But RUP does little on Process Verification or Who should do it
- Software Subcontract Management
 - RUP does not deal with Subcontract Selection Process
 - RUP does not deal with managing the interface between the Prime and Subcontract during the project

...make it happen

RUP and Level 3 KPAs

CMM Level 3 KPAs

RUP Support for CMM Level 3

- RUP provides a good basis for the Organisational Standard Software Process
- With all the white papers, templates, etc. RUP provides a good basis for the Process Library
- Reviews are incorporated into the workflows
 - E.g. Requirements, Design and Code Reviews
- RUP must be tailored
- RUP provides much support on performing the engineering and management activities
 - (i.e. helps towards SPE)

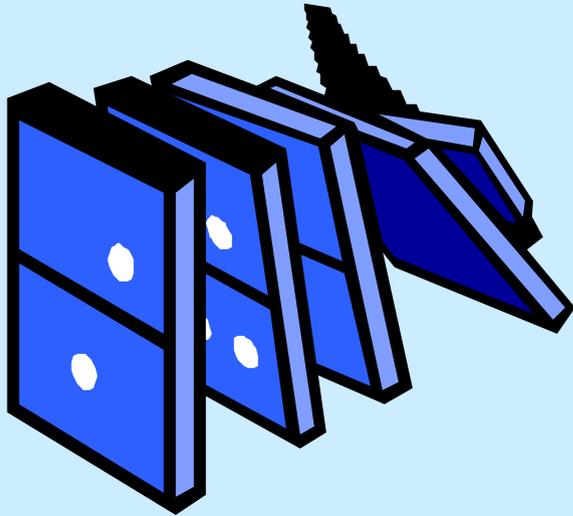

Gaps with RUP and CMM Level 3

- The Software Engineering Process Group SEPG and managing process development organisationally is missing from RUP
- RUP doesn't provide the organisational specific tailoring guidelines
- RUP specifies the metrics are captured but it does not fulfil the concept of a CMM level 3 process database
- The aspect of developing organisational competency through a training programme is missing from RUP
- RUP has no specific means of managing intergroup coordination
- RUP does not cover Programme Management

The dominos fall without an OSSP

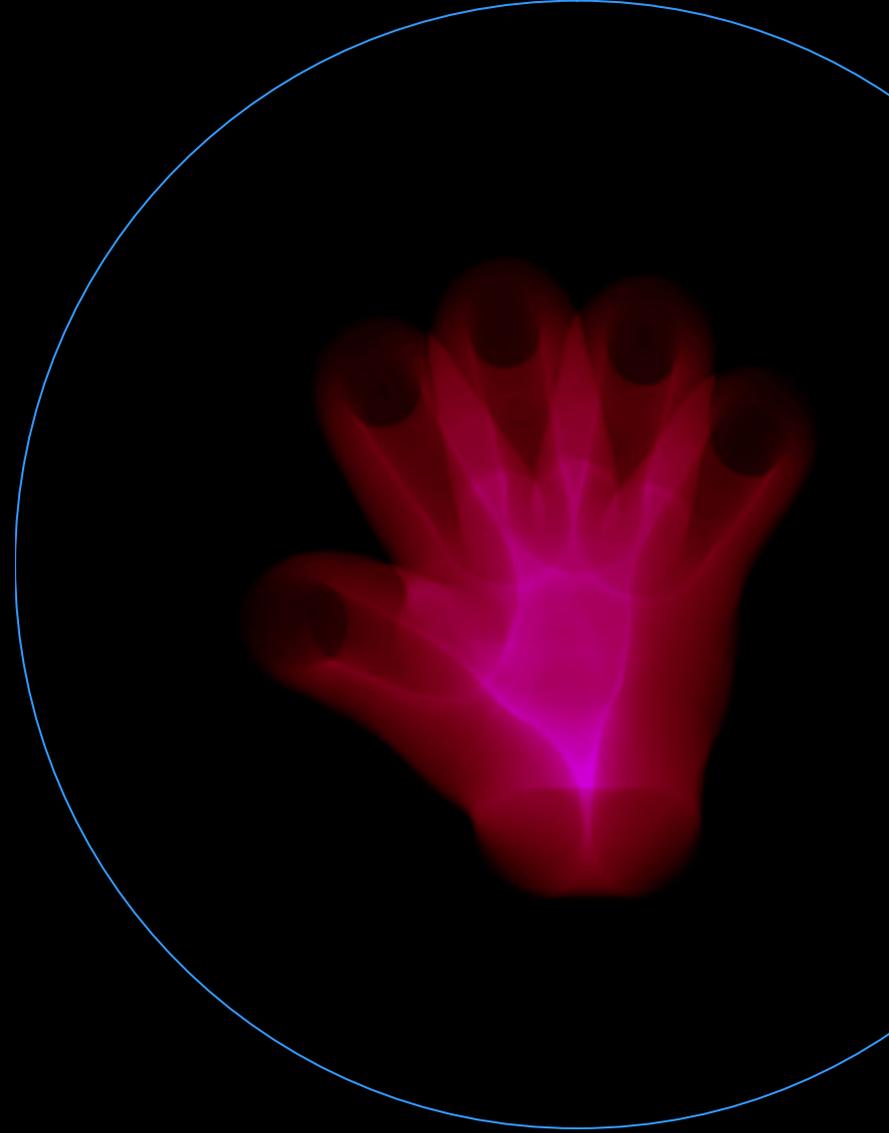

- The OSSP is essential to CMM Level 3
- Without it full implementation of the level 3 KPAs is not possible
- The RUP provides a significant starting point in developing your OSSP and your capability to address CMM Level 3

Ortia

...make it happen

Ortia

©Ortia 2003

In Summary

Gaps in RUP at each level

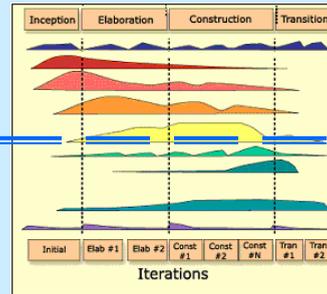

level 3

Software Engineering
Process Group

Competence Program
(Baselining & Assurance)

Organisational
Process Tailoring
Guidelines

Inter-Group Comms
(Program Management,
Governance)

RUP

level 2

½ of SQA

Subcontract
Management

Ortia

©Ortia 2003

Summary

- CMM provides the what for a Software Process Improvement programme
- RUP provides some (but a significant amount) of the what for CMM Level 2&3 requirements
- RUP does need tailoring by those who understand it
- Get to know the 6 wise men!!
- The gaps can be filled by using best practice from industry

But within a real organisation For example

level 3

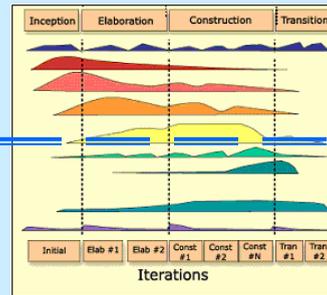

Software Engineering
Process Group

Competence Program
(Baselining & Assurance)

Organisational
Process Tailoring
Guidelines

Inter-Group Comms
(Program Management,
Governance)

level 2

RUP

½ of SQA

Subcontract
Management

©Ortia 2003

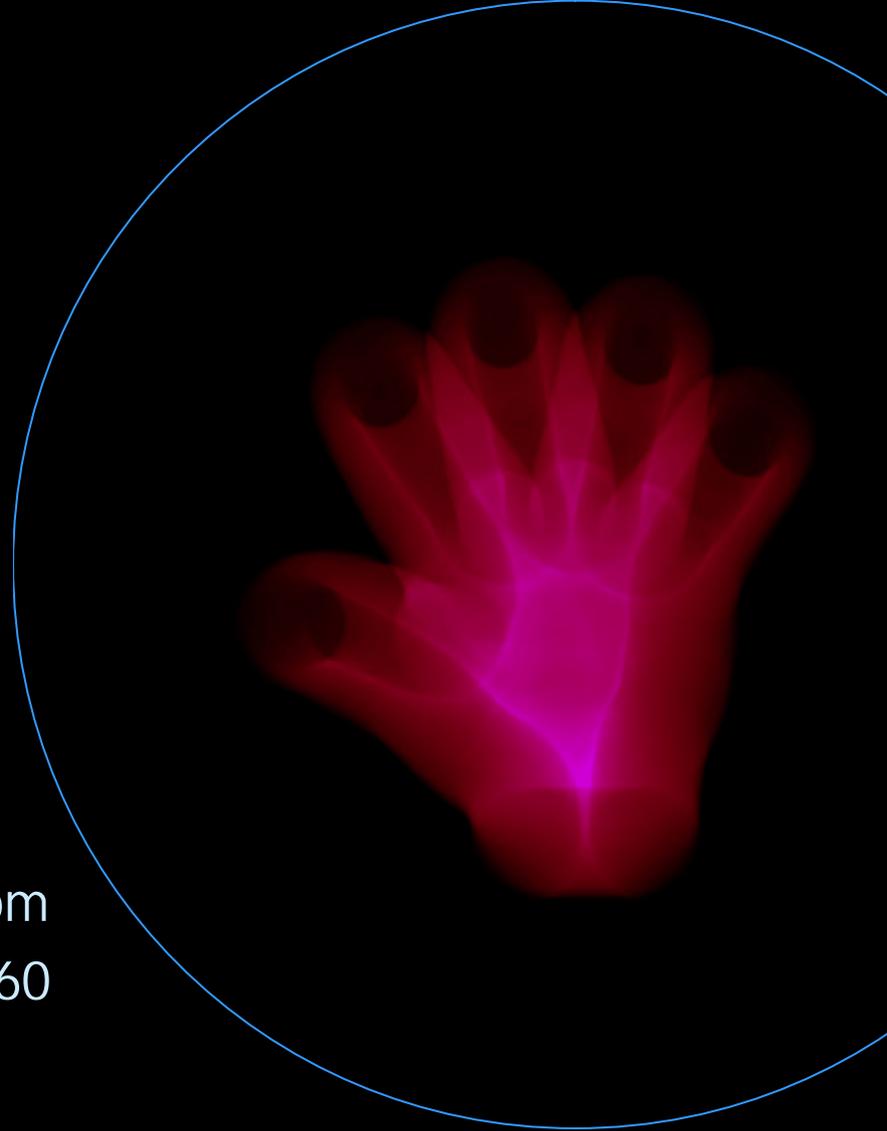

RUP can provide a significant enabler to reach CMM Levels 2 & 3 however it is deficient in key areas

...make it happen
