## CIOview TCOnow for Retail Store Systems Install - IBM Business Partners

Sign on to PartnerWorld and go to: http://www.ibm.com/partnerworld/sales/systems/eservertcotools

(NOTE: the BP must be a server-authorized reseller to access this site)

## STEP 1

First you need to **download/install the ClOview player.** This will then 'play' any 'content module. Once downloaded/launched you will see a number of content modules. Some you have access to, some you do not

TIPS to watch for (read the instructions carefully!):

- 1. Download and run the install program
- 2. Run the program and Register (fill in all details especially email ID)
- 3. Look for license file (attachment) in you in basket. You need to detach/save that file to your CIOview folder

## STEP 2

The recent effort with CIOview was to develop a content module specific to the Retail POS environment, with a lot of similarities in content/measurements to the BCS studies that had been recently done for some specific customers. This content module is **TCOnow! for Retail Store Solutions** 

After Step 1 you should be able to see/verify release via 'About'

Then Browse for available content modules:
