Pulse2010

The Premier Service Management Event

Optimizing the World's Infrastructure

Business Leaders Struggle With Issues

Lack of Visibility into Operations Leads to Many Business Problems

Exceptions waste resources and increase costs

Ineffective inventory management leads to lost sales

Poor response time leads to unhappy customers

Poor workload management leads to dissatisfied employees

Paper-intensive and manual processes impede visibility

Supply chain disruptions increase costs

85% of CEOs Require More Insight into their Businesses

Business Service Management (BSM) Provides Process Visibility

Business leaders gain real-time visibility and actionable insight into processes

Real-time information consolidated into customizable dashboards

Business leaders monitor process KPIs and receive alerts

Achieve End-to-End Process Visibility

Understand, monitor and explore the state of business operations

External Information

Information affecting
business service performance

Collaboration

Share metrics and
models with teams
to resolve situations

The screenshot displays the Tivoli Integrated Portal interface. On the left is a navigation menu with categories like Welcome, Security, Users and Groups, Administration, Availability, Reporting, and Settings. The main area is divided into several panels: 'Service Tree' showing a hierarchical view of services with status indicators (green for OK, red for error); 'Urgent Services' table listing services with their states and last changed times; 'Service Viewer' showing a hierarchical diagram of a service; and 'Service Details' showing a table of events for a specific service.

Service	State	Last Changed
ET_Convert	Error	7/28/08 9:03 AM
ET_ExecuteSellOrder	Error	7/28/08 9:03 AM
ET_CheckAccountBalance	Error	7/28/08 9:04 AM
ET_Transfer	Error	7/28/08 9:04 AM
ET_ChangeOrder	Error	7/28/08 9:03 AM
ET_ChangeOrder	Error	7/28/08 9:03 AM
ET_ExecuteBuyOrder	Error	7/28/08 9:03 AM
ET_Login	Error	7/28/08 9:04 AM

Business Impacting Alerts

Notification of situations
that require response

Understanding trends by
combining multiple KPI's using
historical information

“See and Respond”

Service Visibility Helps Business Leaders Manage & Improve Operations

The screenshot shows the Tivoli Service Availability Manager (SAM) interface. The left sidebar contains a navigation menu with categories like Users and Groups, Troubleshooting, Administration, Event Management Tools, Availability, Reporting, Troubleshooting and Support, Dashboards, and Settings. The main area is divided into several panes: Service Tree, Service Viewer, Urgent Services, and Service Details.

Identify health, events, make smart choices (Callout pointing to the Service Tree pane)

Understand up-to-minute business performance by monitoring KPIs (Callout pointing to the Service Viewer pane)

Continuously improve key business services (Callout pointing to the Service Viewer pane)

Detect, respond rapidly to business Impact situations (Callout pointing to the Service Viewer pane)

Customize dashboards (Callout pointing to the Settings pane)

Solve the primary Business Impacts first (Callout pointing to the Urgent Services pane)

Service	State	Last Changed
ET_CancelOrder	Green	
ET_ChangeOrder	Red	
ET_Execut...Order	Green	
ET_Execut...Order	Red

Current Trends towards Business Operations Center

Dashboard Builder

Managing Customer Experience

Improving Administration and Access

Analytics for Proactive Service Response

Expanded Options for Reporting and Sharing Historical Data

Evolving Trends towards Business Operations Center

Full Self-Service Dashboard

Rapidly assemble & publish dashboards without coding

Add new feeds from variety of data sources and create new dynamic widgets

Remix & Transform information into new feeds

Reuse & share mashups, metrics, and visual content

Define & Measure SLAs

SLA is agreed to with a customer you're providing services to

The SLA is entered into the BSM Family for tracking

BSM Family tracks the many dimensions of the SLA

SLA name	SLA state	SLA name
Web Service SLA	Health Counts	Health Counts
Web Portal SLA	Health Counts	Health Counts
Web CRM SLA	Health Counts	Health Counts
Period: 15 min	Health Counts	Health Counts
Period: Hourly	Health Counts	Health Counts
Period: Daily	Health Counts	Health Counts
Period: Weekly	Health Counts	Health Counts

The dashboard tracks the SLA for key stakeholders to view and be alerted on

Manage New Services End to End

Customer needs to track new Service Model

COTS Model is available in Library

COTS Model is deployed in BSM Family

Customer fine tunes for his environment

User has dashboard, reports and analytics available

Service-based Correlation and Control

Customer gets a major outage on a service

Impact correlates Omnibus events with CDM linking TADDM change data assets

User gets correlated operational context before & after changes

Event	Current	Previous	Current	Previous
Batman			NIC 1235	NIC 934
Robin			JVM 1.5	JVM 1.5
Joker			Joker:80	Joker:80
Riddler			4GB	2GB

User takes appropriate next step or hand-off

Optimized Task Based Administration

Administrator needs to create/modify a user and his ability to work with the BSM family

Defines the user once into the BSM family of products.

Assigns the user into a group and role - for the family

Maps those groups onto pages, roles, views, data across the integrated products

Transforming Trends: Breaking down the walls between business and IT

- *The need for transparency is pervasive!*

- Business and IT collectively need:

- Greater accountability, visibility, communications, and knowledge from the people, resources and processes responsible for service management
- To elevate the interaction and involvement of both parties in the delivery of services
- To leverage and align operations around new tools that empower all end users to become “knowledge workers”

Self Service capabilities and Social Networks are delivering this to the world today – why not to YOUR business?

There's Value in Breaking Down these Walls

"The Journey to BSM Value" - PLANNED

"The Journey to BSM Value" - ACHIEVED

Everyone

Thinks Differently!

- Understands Business Goals, Objectives and Outcomes
- Understands what impacts them
- Understands how they support them
- Supports Business via IT

[via Catalog/Wiki]

Knowledge Worker

Operates Differently!

- Builds stronger relationships with business
- Communicates with clarity and purpose
- Makes informed decisions
- Takes appropriate actions

[via Catalog/Wiki]

Empowered Worker

Responds Differently!

- Understands and manages "big picture"
- Driven by impact, importance
- Understands role, response
- Speaks business & IT lang.

[via Catalog/Wiki]

So what is a Self-Service Dashboard?

- ***A self-service dashboard is a user-friendly way for a greater community of users to easily access, extend, and use the data they need, creating the desired views by themselves, and sharing/socializing their contributions without the need to involve IT or power users.***
 - offers the benefit of streamlining the reporting/viewing process
 - increases speed of decision-making process, removing IT work
 - frees up IT personnel from building dashboards
- Dashboard content becomes a simplified set of catalogs for metrics, events, sources, and visualizations
- Dashboard assembly becomes a streamlined action of assembling/sharing a workspace filled with content that is fully interlinked, relevant, and easy to understand

Self Service Dashboard capabilities brought forward with IBM Mashup Center

- ✓ Out of box Widgets for creating Mashups to access data

Develop & Unlock

- ✓ Broad range of Enterprise, Personal, and multi-media Mashup sources

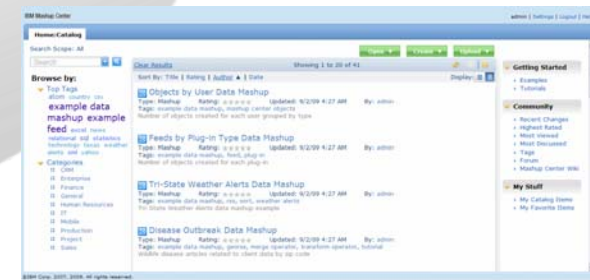

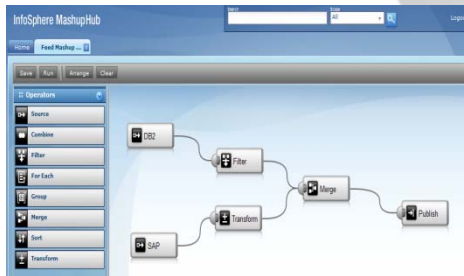

- ✓ Governance and Security for feeds & Mashups

Assemble

Discover

- ✓ End user focused catalog with integrated social features for both Mashups and Mashable assets

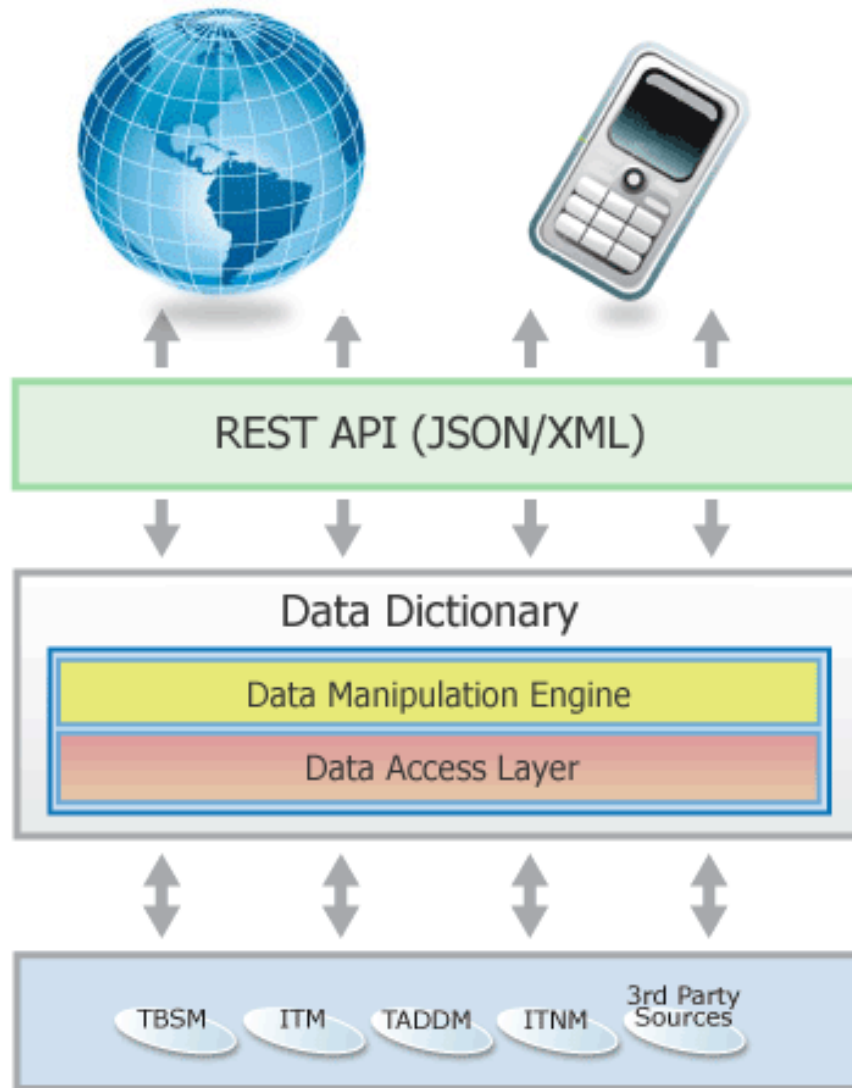

Transform

Reuse existing assets in new combinations

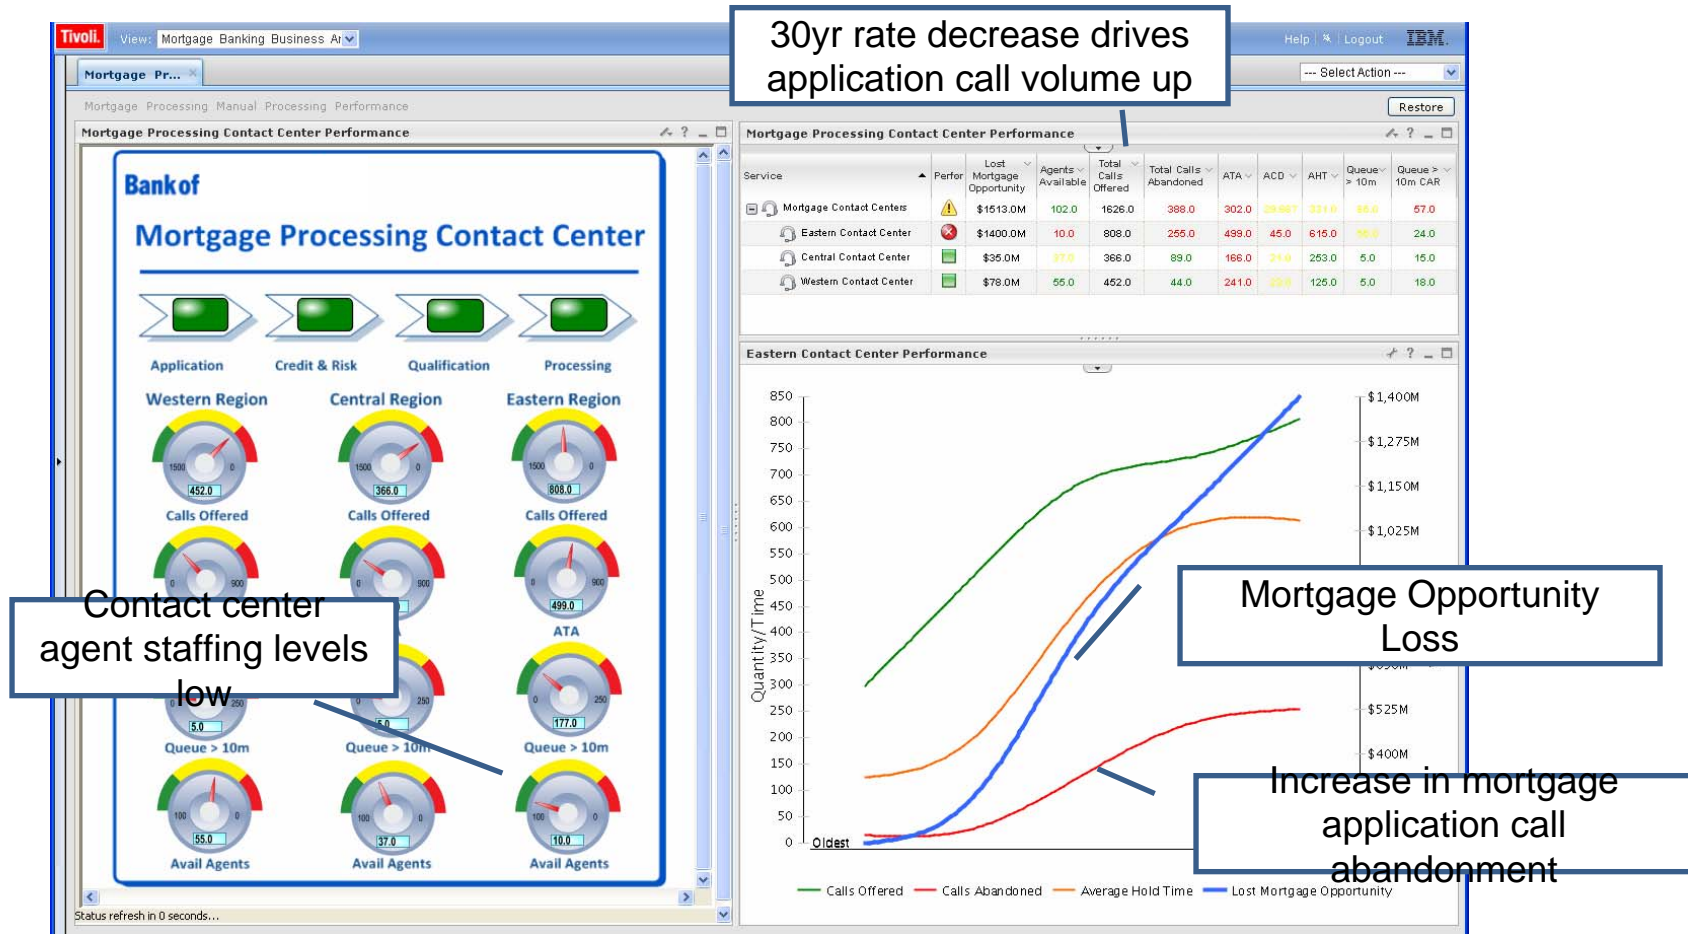

What does the Data Dictionary and REST service bring?

- Focus on creating views based on role and responsibility instead of product specific (treat products as data feeds)
- Completely decouple systems management data from UI to enable mashups
- Leverage Data Integration Services (CDM and the Common Data Model (CDM) and further normalize data
- Allow for quick data integration that can be visualized across a common set of widgets
- 3rd party sources easily integrated (just another data feed)
- Utilize iWidgets to create new visualizations to enhance the look and feel and user experience across multiple products
- Mobile clients and other technology based clients will be able to take advantage of this service

Example: End-to-End Business Operations Visibility

- Business process execution involves automated and manual (human) interactions
- Visibility into contact center operations helps pinpoint process execution issues due to low staffing levels, long calls, etc.

Business Process Execution Step Performance

- Use real time scorecards and charting to provide “**quick, at a glance**” insight into **performance trends**.
- Chart complements the scorecard and **provides historical context** to interpret the real time scorecard information.

- **Assessing mortgage process execution:** Good Process Steps, Errored Process Steps, Bad Process Steps, Avg Step Time
- **Assessing mortgage closings:** Avg Days to Close, Avg Days to Disburse, Closings at Risk, Avg Mortgage Value

Mortgage Processing Business Performance Metrics

Trademarks and disclaimers

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries./ Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both. Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both. IT Infrastructure Library is a registered trademark of the Central Computer and Telecommunications Agency which is now part of the Office of Government Commerce. ITIL is a registered trademark, and a registered community trademark of the Office of Government Commerce, and is registered in the U.S. Patent and Trademark Office. UNIX is a registered trademark of The Open Group in the United States and other countries. Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both. Other company, product, or service names may be trademarks or service marks of others. Information is provided "AS IS" without warranty of any kind.

The customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.

Information concerning non-IBM products was obtained from a supplier of these products, published announcement material, or other publicly available sources and does not constitute an endorsement of such products by IBM. Sources for non-IBM list prices and performance numbers are taken from publicly available information, including vendor announcements and vendor worldwide homepages. IBM has not tested these products and cannot confirm the accuracy of performance, capability, or any other claims related to non-IBM products. Questions on the capability of non-IBM products should be addressed to the supplier of those products.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Some information addresses anticipated future capabilities. Such information is not intended as a definitive statement of a commitment to specific levels of performance, function or delivery schedules with respect to any future products. Such commitments are only made in IBM product announcements. The information is presented here to communicate IBM's current investment and development activities as a good faith effort to help with our customers' future planning.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.

Prices are suggested U.S. list prices and are subject to change without notice. Starting price may not include a hard drive, operating system or other features. Contact your IBM representative or Business Partner for the most current pricing in your geography.

Photographs shown may be engineering prototypes. Changes may be incorporated in production models.
