

Maximo Everyplace

Ken Rawlings – April 2010

- Access to the same Maximo that you use today through desktop browsers, but with expanded browser support
 - Support for Mobile Safari (for iPhone and iPod touch)
- Ability to configure screens through special Application Designer features for access on mobile devices with supported browsers
 - Screen configuration happens on a desktop machine, not a mobile device

Customers want quick access to specific Maximo functionality on a mobile device

Why do it?

- They don't want to have to download anything on to the device in order to get access to Maximo (Everyplace is entirely browser based; nothing to install on the device)
- They want the WYSIWYG configuration capabilities that the Maximo Application Designer provides
- They don't want to invest heavily in the Mobile device hardware (an iPhone or iPod Touch starts at \$199 USD)

- Initially available in September 2009 as limited release
- English only
- Requires minimum fixpack level of 7.1.1.5
- Supported browsers:
 - Mozilla Firefox 3.0+ for Windows XP and Redhat Linux desktop
 - Internet Explorer 7.x Windows XP
 - Vista O/S Client w/Internet Explorer 7.x
 - Mobile Safari for iPod Touch and iPhone
- Requires Internet connectivity on devices where Maximo is accessed
 - Nothing to install on the devices
 - No offline support

- New Application Designer functionality to make designing for different screen sizes easier
- A new look for Maximo applications that can be applied on a perapplication basis. It makes interacting with Maximo easier on a touch screen
- No new apps are included. Rather, we're delivering the toolkit in the Application Designer to help customers make their own applications easier to use across a range of devices.
- All the functionality of Maximo 7.1.1.5 is available for use in Maximo Everyplace applications

- Q: Does it work on Blackberry?
- A: No, not at this time Blackberry is currently in development on a new 'webkit based' browser that we will evaluate once available
- Q: Will it work on other devices, netbooks, tablets, etc.?
- A: Maximo Everyplace will work on devices using browsers we currently support like IE 7, so devices like the Panasonic Toughbook as well as many Windows based tablet PCs are supported
- Q: Will my custom applications work in Everyplace?
- A: Using Application Designer you can redesign and deploy your custom applications for mobile access as long as you are using standard UI controls available in Application Designer
- Q: What other browsers/devices are you researching?
- A: We intend to add support for more browsers and devices going forward. Browsers using the webkit engine are the most likely targets as they handle Maximo best – they include Android devices (i.e Google Nexus One & Motorola Droid), Symbian devices (Nokia), the new Apple iPad, and in future Blackberry

- Maximo Everyplace does not replace Maximo Mobile
 - Customers may purchase both Maximo Mobile and Maximo Everyplace
 - · Maximo Everyplace is for users who are connected "always"
 - No offline capabilities
 - Maximo Mobile is for users who can be disconnected and requires Maximo data while disconnected
- <u>Maximo Mobile is the mobile solution for remote/disconnected work</u>
- Maximo Everyplace is currently available in limited release
 - Maximo 7.1.1.5 +
 - · English only
 - · iPhone / iPod Touch only
