

# **ZTE CDMA Gateway Distribution Note**

Date: 9 January 2008

---

## 1. Associated Documents

The following documentation accompanies this release:

### 1.1 Referenced Documents

Document Name	Document Description
[Install Note]	This document describes the steps required to install and run a Gateway.
[Gateway Framework Distribution Note]	This document provides an overview of the release history of the Gateway framework.

### 1.2 Other Related Documents

Document Name	Document Description
[Gateway Framework User Guide]	Gateway Framework User Guide describing the management and configuration of the Gateway Framework.
[ZTE CDMA User Guide]	ZTE CDMA Gateway User Guide describing the management and configuration of the Vendor Gateway.

## 2. Introduction

You should read this Distribution Note before proceeding to install the ZTE CDMA Gateway, which is referred to as the Vendor Gateway.

This Distribution Note provides an overview of the release history of this Gateway.

## Operating System Support

The Vendor Gateway is built using the generic Gateway Framework. The Vendor Gateway is currently supported on the platforms as in the Gateway Framework Distribution Note.

## Perl Version

The Vendor Gateway requires Perl version 5.6.1.

## Gateway Framework

The Vendor Gateway requires the Gateway Framework release 3.4 and above.

See [Gateway Framework Distribution Note].

The Gateway Framework and Vendor Gateway release and installation have been decoupled into separate packages and procedures.

See [Install Note].

### 3. Release History

#### 3.1 Release 3.4.0
