1 Description

This document provides information on the Prospect® 8.0 for Nortel GSM/GPRS/UMTS RP14 patch 10 (4.0.14.0.10). This is a patch release. The release adds support for counter groups due to MGW MG20 and MSC W-NMS 5.0.1/NSS 20.

This release does not change the Prospect core version or the recommended Prospect client version.

- The Prospect Base version certified against this release is 8.0.4.1.05
- The client version certified against this release is 8.0.4.0.8
- The operating system version certified against this release is Solaris 9 and Solaris 10.
- The Oracle Database version certified against this release is Oracle 9i 9.2.0.8.

2 Supported Platforms

Complete platform support information for the current release is in the *Prospect Server Preparation Guide*. Complete client hardware and software requirements are in the *Prospect Installation Guide*.

Already Supported Vendor Software

Nortel Passport 15000 Wireless Gateway / UMTS SGSN / Aggregation Node UMTS03 3.0

Nortel Media Gateway (MGW) MGW17, MGW18, W-NMS 5.0.1/NSS 19

Nortel Passport 15000 GPRS SGSN GPRS 2.1, 3.0, 4.0, 5.0, 6.0, PC04

Nortel Shasta GGSN UMTS03 3.0, 3.2.1, 4.0, 4.1

Nortel SS7/IP Gateway - GPRS R2.1, R3.0, R4.0, UMTS03, GPRS6.0/UMTS4.0

Nortel RNC UMTS03 UA3.1, UA3.2 and UA4.0

Nortel Node B UMTS03 UA3.1, UA3.2 and UA4.0

Nortel MSC GSM13, GSM15, GSM/NSS17 (includes NSS16), GSM/NSS18, W-NMS 5.0.1/NSS 19

Nortel HLR GSM13, GSM15, GSM/NSS17 (includes NSS16), GSM/NSS18

Nortel USP 7.0, 8.1, 10.0, 12.0

Nortel SLR NSS17

Nortel Data Server NSS17

Nortel GSM/GPRS/EDGE BSS - 12.04, 12.04B, 12.04C, 12.04D, 13.02B, 14.3, 15.0, 15.1, 16.0 based on OMC-R v16.0

Nortel GPRS/EDGE PCUSN – 12.04, 12.04B, 12.04C, 12.04D, 13.02B, 14.3, 15.0, 15.1, 16.0 based on OMC-R v16.0

Added Supported Vendor Software in this release

Nortel Media Gateway (MGW) MG20

Nortel MSC W-NMS6/NSS20

3 New Features

3.1 Nortel Media Gateway (MGW)

This release modifies the performance data dictionary in Media Gateway network elements. The following list shows changes to entities

Prospect Entity	Managed Object	Counter Status	Гесhnology
NSTA_MGW	CallStatistics	added	MGW
	Congestion		
MGC_Interface	MediaGatewayControllerInterfac e	added	MGW

New counters are as below:-

peakReserved	NCTA	nook	Contovto	F	С	the collection interval.	<u> </u>
peakkeseived	NSTA	peak	Contexts	<u> </u>		This attribute indicates the peak	С

Contexts	_MG W	Reserved				value of the activeReservedContexts operational attribute.	
peakUdiClear ChannelCalls	NSTA _MG W	peak Udi	Clear Channel Calls	F	С	This attribute displays the peak number of UDI clear channel calls during the collection interval.	С
tdmTrfoConne ctionsFailed	NSTA _MG W	TDM TrFO	Connecti ons Failed	F	С	This attribute counts the number of connections lost due to TDM (Time Division Multiplex) TrFO (Transcoder Free Operation).	S
tdmTrfoConne ctionsSetup	NSTA _MG W	TDM TrFO	Connecti ons Setup	F	С	This attribute counts the number of TDM (Time Division Multiplex) TrFO (Transcoder Free Operation) connections successfully established.	S
totalA2pA2pC ontexts	NSTA _MG W	total A2p A2p	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between two A2P interface terminations.	S
totalA2pPktNe tworkContexts	NSTA _MG W	total A2p PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between an A2P interface termination and a Packet Network interface termination.	S
totalAPktNetw orkContexts	NSTA _MG W	total A PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between an A interface termination and a Packet Network interface termination.	S
totalCsdlwfCo ntexts	NSTA _MG W	total Csd lwf	Contexts	F	С	This attribute counts contexts on the Media Gateway with CSD IWF interface terminations.	S
totalluPktNetw orkContexts	NSTA _MG W	total lu PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between an lu interface termination and a Packet Network interface termination.	S
totalNbPktNet workContexts	NSTA _MG W	total Nb PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between an Nb interface termination and a Packet Network interface termination.	S
totalPktNetwor kA2TdmConte xts	NSTA _MG W	total PktNet A2Tdm	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between a Packet Network interface termination and an A2Tdm interface termination.	S
totalPktNetwor kPktNetworkC ontexts	NSTA _MG W	total PktNet PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between two Packet Network interface terminations.	S
totalPstnPktN etworkContext s	NSTA _MG W	total Pstn PktNet	Contexts	F	С	This attribute counts contexts on the Media Gateway with a bothway topology between an PSTN interface termination and a Packet Network interface termination.	S
totalReserved Contexts	NSTA _MG W	total Reserved	Contexts	F	С	This attribute count conexts on the Media Gateway that are active in a Reserved Contexts Pool.	S
udiClearChanI nsufResource s	NSTA _MG W	udi Clear Chan	Insuf Resourc es	F	С	This attribute displays the number of UDI clear channel calls that failed due to insufficient resources during the collection interval.	S
udiClearChan	NSTA	udi Clear	Other	F	С	This attribute displays the number	S

OtherTypeFail ures	_MG W	Chan	Type Failures			of UDI clear channel calls that failed due to reasons other than insufficient resources or unsupported property failures during the collection interval.	
udiClearChan nelCallsAttem pted	NSTA _MG W	udi Clear Chan	Calls Attempte d	F	С	This attribute displays the number of UDI clear channel calls attempted during the collection interval.	S
contextThresh oldSurpassed	NSTA _MG W	context Threshold	Surpass ed	F	С	This attribute indicates the number of times the contextLoadPercent attribute of the CallStatistics component has surpassed the congestionThreshold.	S
csdlwfThresho ldSurpassed	NSTA _MG W	csd lwf Threshold	Surpass ed	F	С	This attribute indicates the number of times the csdlwfLoadPercent attribute of the CallStatistics component has surpassed the congestionThreshold.	S
ds0Insufficient ResourceEven ts	NSTA _MG W	ds0 Insufficien t	Resourc e Events	F	С	This attribute indicates the number of times the ds0InsufficientResourceEvents attribute of the CallStatistics component has surpassed the congestionThreshold.	S
evrcBThreshol dSurpassed	NSTA _MG W	evrcB Threshold	Surpass ed	F	С	This attribute indicates the number of times the evrcBLoadPercent attribute of the CallStatistics component has surpassed the evrcBCongestionThreshold.	S
evrcThreshold Surpassed	NSTA _MG W	evrc Threshold	Surpass ed	F	С	This attribute indicates the number of times the evrcLoadPercent attribute of the CallStatistics component has surpassed the EvrcCongestionThreshold.	S
g729Threshol dSurpassed	NSTA _MG W	g729 Threshold	Surpass ed	F	С	This attribute indicates the number of times the g729LoadPercent attribute of the CallStatistics component has surpassed the g729CongestionThreshold.	S
multipartyThre sholdSurpass ed	NSTA _MG W	multiparty Threshold	Surpass ed	F	С	This attribute indicates the number of times the multipartyLoadPercent attribute of the CallStatistics component has surpassed the congestionThreshold.	S
reserveContex tInsuffResEve nts	NSTA _MG W	reserve Context	Insuff Res Events	F	С	This attribute indicates the number of times the numContextsReserved attribute of the ResourceAllocation component has exceeded the current MGW capacity.	S
reserveContex tThresholdSur passed	NSTA _MG W	reserve Context	Threshol d Surpass ed	F	С	This attribute indicates the number of times the reserveContextILoadPercent attribute of the CallStatistics component has surpassed congestionThreshold.	S
subnetThresh oldSurpassed	NSTA _MG W	subnet Threshold	Surpass ed	F	С	This attribute indicates the number of times the subnetLoadPercent attribute of the CallStatistics component has surpassed the congestionThreshold.	S
throughputThr	NSTA	throughpu	Surpass	F	С	This attribute indicates the number	S

esholdSurpas sed	_MG W	t Threshold	ed			of times the throughputLoadPercent attribute of the CallStatistics component has surpassed the congestionThreshold.	
totalHangterm TimerxExpirie s	MGC_ Interfa ce	total Hangterm	Timerx Expiries	F	С	This attribute counts hanging termination timerx expiries. The counter is incremented every time the timerx parameter defined in the H.248.36 Hanging Termination Detection package expires on a termination. The timer value was set to either the value of the hangtermTimerxDefault provisionable attribute or it was provided by the Media Gateway Controller (MGC).	S

A
MSUPUTIL	MSU	MSU Payld Util	MO CM Serv Req	F	С	The CM Service Request for Short Msg for MS origination Message (MSUPUTIL) register indicates the per-MSU peak payload utilization over the entire transfer period.	A
MSUCMPLX	MSU	RT Payld Usage	MicroSeco nds	F	С	The payload usage of real-time per unit of throughput (microseconds) (per MSU). (MSUCMPLX) register indicates payload usage of real-time per unit of throughput (microseconds per 1 unit of throughput). However, this OM register counts per MSU value.	A
MSUSCHED	MSU	Schedule overhead	reltv to exptd Cap	F	С	The Ratio of scheduling overhead relative to expected at capacity (per MSU) (MSUSCHED) register indicates the ratio of scheduling overhead relative to expected at capacity. However, this OM register shows per-MSU counts.	A
MSUFORE	MSU	Schedule overhead	reltv to foregrd Cap	F	С	The ratio of operating system overhead relative to foreground at capacity (per MSU) (MSUFORE) register indicates the ratio of scheduling overhead	A

						relative to expected at capacity per MSU.	
MSUMAINT	MSU	Maint Util	reltv to allocated Cap	F	С	The ratio of maintenance utilization relative to what has been allocated (per MSU) (MSUMAINT) register indicates the ratio of maintenance utilization relative to what has been allocated per MSU.	A
MSUDNC	MSU	NOSFT Util	reltv to allocated Cap	F	С	The Ratio of NOSFT class utilization relative to what has been allocated (per MSU). (MSUDNC) register indicates the ratio of scheduling overhead relative to expected at capacity pre MSU.	A
MSUOM	MSU	OM Util	reltv to allocated Cap	F	С	The Ratio of OM class usage relative to what has been allocated (per MSU) (MSUOM) register indicates the ratio of OM class usage relative to what has been allocated per MSU.	A
MSUGTERM	MSU	GTERM Util	reltv to office paramtr	F	С	The ratio of GTERM class utilization to the Guaranteed_Terminal_Cpu_Shar e office parm per MSU (MSUGTERM) register indicates the ratio of GTERM class utilization relative to the Guaranteed_Terminal_Cpu_Shar e office parameter.	A
MSUBKG	MSU	Backgrd Usage	reltv to allocated Cap	F	С	The ratio of background classes usage to what has been allocated per MSU (MSUBKG) register indicates the ratio of background classes usage relative to what has been allocated per MSU.	A
MSUIDLE	MSU	MSU IDLE	In minutes	F	С	The number of minutes during which there was some IDLE time per MSU (MSUIDLE) register indicates the number of minutes during which there was some IDLE time per MSU.	S
MSUAUXCP	MSU	AUXCP Usages	reltv to office paramtr	F	С	The Ratio of AUXCP class usage relative to Auxcp_Cpu_Share office parm per MSU. (MSUAUXCP) register indicates the ratio of Ratio of AUXCP class usage relative to the Auxcp_Cpu_Share office parm per MSU.	A
MSUNETM	MSU	NETMTC Usage	reltv to allocated Cap	F	С	The ratio of NETMTC class usage relative to what is allocated per MSU (MSUNETM) register indicates the ratio of ratio of NETMTC class usage relative to what has been allocated per MSU.	A
MSUSNIP	MSU	SNIP Usage	reltv to allocated Cap	F	С	The Ratio of SNIP class usage relative to what is allocated per MSU (MSUSNIP) register indicates the ratio of SNIP class usage relative to what has been	A

						allocated per MSU.	
MSUNXFR	MSU	# transfer period	accumulat ion	F	С	The number of transfer periods accumulated in this OM report per MSU (MSUNXFR) register indicates the number of transfer periods accumulated in this OM transfer report per MSU.	S
MSUOVER	MSU	CALLP Util	> 100% in min.	F	С	The number of one minute intervals during which CALLP utilization was greater than 100 percent (per MSU) per MSU (MSUOVER) register indicates the number of one minute intervals during which CALLP utilization was greater than 100% per MSU.	S
MSUOTHLD	MSU	# util exceed	Office thrsld paramtr	F	С	The number of times that the utilization exceeds the office parameter CC_ENGLEVEL_WARNING_TH RESHOLD per MSU (MSUOTHLD) register indicates the number of times that the utilization exceeds the office parameter CC_ENGLEVEL_WARNING_TH RESHOLD per MSU counts.	S
TXMSGMU	MSU	M3UA	Trans Msg	F	С	The M3UA transmit message per MSU (TXMSGMU) register counts m3ua transmit messages.	S
RXMSGMU	MSU	M3UA	Recv Msg	F	С	The M3UA receive message per MSU (RXMSGMU) register counts m3ua receive message.	S
LOSTMGMU	MSU	M3UA	Lost Msg	F	С	The M3UA lost message per MSU (LOSTMGMU) register counts M3UA lost messages.	S
SOSZMU	MSU	CPIPP ShrtBufPI	Seized Buffer MSU	F	С	The allocated buffer from the CPIPP short buffer pool on the MSU (SOSZMU) register counts the number of times that a buffer was allocated from the CPIPP short buffer pool on the MSU.	S
SOOVFLMU	MSU	CPIPP ShrtBufPI	Overflow Buffer MSU	F	С	The buffer from the CPIPP short buffer pool on the MSU could not be allocated (SOOVFLMU) register counts the number of times that a buffer from the CPIPP short buffer pool on the MSU could not be allocated.	S
SOLWMKMU	MSU	CPIPP ShrtBufPl	Free Buffer MSU	F	С	The least amount of free buffers in CPIPP short buffer pool on the MSU (SOLWMKMU) register contains the least amount of free buffers in CPIPP short buffer pool on the MSU.	A
SOTOSSMU	MSU	CPIPP ShrtBufPI	Recv SAPI Msg Toss MSU	F	С	The received SAPI message of cpipp_msg_priority 0 was tossed (SOTOSSMU) register counts the number of times a received SAPI message of cpipp_msg_priority 0 was tossed because the number of buffers left is less than one-third of the CPIPP short buffer pools size on	S

						the MSU.	
LOSZMU	MSU	CPIPP LgBufPI	Seized Buffer MSU	F	С	The allocated buffer from the CPIPP long buffer pool on the MSU (LOSZMU) register counts the number of times that a buffer was allocated from the CPIPP long buffer pool on the MSU.	S
LOOVFLMU	MSU	CPIPP LgBufPI	Overflow Buffer MSU	F	С	The buffer from the CPIPP long buffer pool on the MSU could not be allocated (LOOVFLMU) register counts the number of times a buffer from the CPIPP long buffer pool on the MSU could not be allocated.	S
LOLWMKMU	MSU	CPIPP LgBufPI	Free Buffer MSU	F	С	The least amount of free buffers in CPIPP long buffer pool on the MSU (LOLWMKMU) register contains the least amount of free buffers in CPIPP long buffer pool on the MSU.	A
LOTOSSMU	MSU	CPIPP LgBufPI	Recv SAPI Msg Toss MSU	F	С	The received SAPI message of cpipp_msg_priority 0 was tossed (LOTOSSMU) register counts the number of times that a received SAPI message of cpipp_msg_priority 0 was tossed because the number of buffers left is less than one-third of the CPIPP long buffer pools size on the MSU.	S
XLSZMU	MSU	CPIPP ExLgBufPI	Seized Buffer MSU	F	С	The allocated buffer from the CPIPP extra long buffer pool on the MSU (XLSZMU) register counts the number of times that a buffer was allocated from the CPIPP extra long buffer pool on the MSU.	S
XLOVFLMU	MSU	CPIPP ExLgBufPI	Overflow Buffer MSU	F	С	The buffer from the CPIPP extra long buffer pool on the MSU could not be allocated (XLOVFLMU) register counts the number of times that a buffer from the CPIPP extra long buffer pool on the MSU could not be allocated.	S
XLLWMKMU	MSU	CPIPP ExLgBufPI	Free Buffer MSU	F	С	The least amount of free buffers in CPIPP extra long buffer pool on the MSU (XLLWMKMU) register contains the least amount of free buffers in CPIPP extra long buffer pool on the MSU.	A
XLTOSSMU	MSU	CPIPP ExLgBufPI	Recv SAPI Msg Toss MSU	F	С	The received SAPI message of cpipp_msg_priority 0 was tossed (XLTOSSMU) register counts the number of times that a received SAPI message of cpipp_msg_priority 0 was tossed because the number of buffers left is less than one-third of the CPIPP extra long buffer pools size on the MSU.	S
HGSZMU	MSU	CPIPP HugBufPl	Seized Buffer	F	С	The allocated buffer from the CPIPP huge buffer pool on the	S

			MSU			MSU (HGSZMU) register counts	
			, wee			the number of times that a buffer	
						was allocated from the CPIPP	
						huge buffer pool on the MSU.	_
HGOVFLMU	MSU	CPIPP	Overflow	F	С	The buffer from the CPIPP huge	S
		HugBufPl	Buffer			buffer pool on the MSU could not	
			MSU			be allocated (HGOVFLMU) register counts the number of	
						times that a buffer from the	
						CPIPP huge buffer pool on the	
						MSU could not be allocated.	
HGLWMKMU	MSU	CPIPP	Free	F	С	The least amount of free buffers	Α
		HugBufPl	Buffer			in CPIPP huge buffer pool on the	
			MSU			MSU (HGLWMKMU) register	
						contains the least amount of free	
						buffers in CPIPP huge buffer	
		00:00	_			pool on the MSU.	
HGTOSSMU	MSU	CPIPP	Recv	F	С	The received SAPI message of	S
		HugBufPl	SAPI Msg Toss MSU			cpipp_msg_priority 0 was tossed (HGTOSSMU) register counts	
			1088 10130			the number of times that a	
						received SAPI message of	
						cpipp_msg_priority 0 was tossed	
						because the number of buffers	
						left is less than one-third of the	
						CPIPP huge buffer pools size on	
						the MSU.	
MASZMU	MSU	CPIPP	Seized	F	С	The allocated buffer from the	S
		MsvBufPl	Buffer			CPIPP massive buffer pool	
			MSU			(MASZMU) register counts the number of times that a buffer was	
						allocated from the CPIPP	
						massive buffer pool on the MSU.	
MAOVFLMU	MSU	CPIPP	Overflow	F	С	The buffer from the CPIPP	S
		MsvBufPl	Buffer			massive buffer pool on the MSU	
			MSU			could not be allocated	
						(MAOVFLMU) register counts the	
						number of times that a buffer	
						from the CPIPP massive buffer	
						pool on the MSU could not be allocated.	
MALWMKMU	MSU	CPIPP	Free	F	С	The least amount of free buffers	Α
IVIALVVIVIRIVIO	IVIOU	MsvBufPl	Buffer	'		in CPIPP massive buffer pool on	^
		Movban	MSU			the MSU (MALWMKMU) register

		1	10.017.1771	I *	~	O (PAIGLIGALI)	ı

		ProcNegoS ucc	Call at MSU			Successes (PNSUCMU) register counts the number of successful H.248 Protocol Negotiation Result Events received for MGW IWF Calls on a per-MSU basis.	
PNFAIMU	MSU	H.248 ProcNegoF ail	MGW IWF Call at MSU	F	С	The Protocol Negotiation failures received for MGW IWF calls per MSU (PNFAIMU) register counts the number of H.248 Protocol Negotiation Failures received for MGW IWF calls (for instance time-out or failures received from MGW) on a per-MSU basis).	S
REUNAMU	MSU	Res Unavl Fail	MGW IWF Call at MSU	F	С	The resource unavailable failures for MGW IWF calls per MSU (REUNAMU) register counts the number of instances where an ErrorDescriptor is returned with the error code of InsufficientResources from the MGW in response to the request for IWF resources on a per-MSU basis.	Ø
WUODRAM U	MSU	WPS UMTS Call Att	Drect Retry HO GSM	F	С	The WUODRAMU is pegged every time an originating WPS UMTS call attempts a directed retry handover to the GSM network. This OM register is pegged in the MSCS on receipt of Relocation Required message (cause=Directed Retry) from the RNC.	O
WUODRSM U	MSU	WPS UMTS Call Succ	Drect Retry HO GSM	F	С	This register is pegged every time whenever an originating WPS UMTS call performs a successful directed retry handover to the GSM network.	w
NUTDRAMU	MSU	NS/EP UMTS Call Att	Drect Retry HO GSM	F	С	The NUTDRAMU is pegged when a terminating NS/EP UMTS call attempts a directed retry handover to the GSM network. NUTDRAMU is pegged in the MSCS on the receipt of Relocation Required message (cause=Directed Retry) from the RNC.	O
NUTDRSMU	MSU	NS/EP UMTS Call Succ	Drect Retry HO GSM	F	С	The NUTDRSMU is pegged every time whenever a terminating WPS UMTS call performs a successful directed retry handover to the GSM network.	S
BLATTMPT	MSC	MSRN Att	Blist GMSC	F	С	The MSRN attempts from Blacklisted GMSC (BLATTMPT) register shows the number of MSRN requests made from the GMSC blacklisted using the BLKLIST tool.	S
AUDREL	MSC	MSRN	Rel by Audit	F	С	The MSRN released by audit (AUDREL) register shows the number of MSRNs cleared by MSRN audit. This register is pegged every time an hung MSRN is moved from the	S

						assigned queue back to the free	
BLAUDREL	MSC	MSRN alloc blist Rel	Rel by Audit	F	С	queue by audit. The MSRN allocated for blacklisted GMSC released by audit (BLAUDREL) register shows the number of MSRNs allocated to the blacklisted GMSC which were cleared by audit. This register is pegged every time a hung MSRN cleared by audit belongs to the blacklisted GMSC.	S
NORMAL	MSC	MSRN Rel	Succ	F	С	The number of successful terminations (NORMAL) register shows the number of MSRNs that were released normally. This register is pegged every time an MSRN is successfully terminated on and is released to the free queue.	S
BLNORMAL	MSC	MSRN Rel Succ	Blist GMSC	F	С	The number of successful terminations from the blacklisted GMSC (BLNORMAL) register shows the number of MSRNs released normally that belong to the blacklisted GMSC. This register is pegged every time an MSRN allocated to the blacklisted GMSC is successfully terminated on and is released to the free queue.	S
BLREJECT	MSC	PRN reject	Blist GMSC	F	С	The number of PRNs rejected from blacklisted GMSC (BLREJECT) register shows the number of PRN requests coming from the blacklisted GMSC which are rejected. This register is pegged every time a PRN request coming from the blacklisted GMSC is rejected.	S
REUSED	MSC	MSRN	Reused	F	С	The number of MSRNs re-used (REUSED) register shows the number of MSRNs which have been re-used. This register is pegged every time call processing allocates an MSRN from the assigned queue.	S
BLOCKED	MSC	PRN Req Reject	MSRN Exhaust	F	С	The number of MSRNs failed due to exhaustion (BLOCKED) register shows the number of PRN requests that have been rejected due to MSRN exhaustion. This register is pegged every time the a PRN request is rejected because no MSRNs are available.	S
WUODRATT	MSC	WPS UMTS Call Att	Drect Retry HO GSM	F	С	The WUODRATT is pegged every time an originating WPS UMTS call attempts a directed retry handover to the GSM network. This OM register is pegged in the MSCS upon receipt of the Relocation Required message	S

						(cause=Directed Retry) from the	
WUODRSUC	MSC	WPS UMTS Call Succ	Drect Retry HO GSM	F	С	RNC. This register is pegged when an originating WPS UMTS call performs a successful directed retry handover to the GSM network.	S
NUTDRATT	MSC	NS/EP UMTS Call Att	Drect Retry HO GSM	F	С	The NUTDRATT is pegged when a terminating NS/EP UMTS call attempts a directed retry handover to the GSM network. NUTDRATT is pegged in the MSCS on the receipt of Relocation Required message (cause=Directed Retry) from the RNC.	S
NUTDRSUC	MSC	NS/EP UMTS Call Succ	Drect Retry HO GSM	F	С	This register is pegged when a terminating WPS UMTS call performs a successful directed retry handover to the GSM network.	S
CMSRMO	MSC	CM Servc Req	MO Call	F	С	The CM Service Request for MS originated calls (CMSRMO) register counts the number of CM Service Requests for mobile originated calls. It is pegged as soon as a CM Service Request for mobile originated calls is received on the MSCS.	S
CMSRSMMO	MSC	CM Servc Req	MO Msg	F	С	The CM Service Request for Short Msg for MS origination Message (CMSRSMMO) register counts the number of CM Service Request for Short Message for a mobile origination. It is pegged as soon as CM Service Request for Short Message is received on MSCS.	S
LUREQNRM	MSC	Normal LOC	Update Req	F	С	The Normal Location Update Requests (LUREQNRM) register counts the number of Normal Location Updates Requests received by the MSCS. It is pegged as soon as Normal Location Update request is received by the MSCS.	S
LUREQPER	MSC	Periodic LOC	Update Req	F	С	The Periodic Location Update Requests (LUREQPER) register counts the number of Periodic Location Updates Requests received by the MSCS. It is pegged as soon as the Periodic Location Update request is received by the MSCS.	S
LUREQATT	MSC	IMSI Attach LOC	Update Req	F	С	The IMSI Attached Location Update Requests (LUREQATT) register counts the number of IMSI Attach Location Updates Requests received by the MSCS. It is pegged as soon as IMSI Attach Location Update request is received by MSCS.	S
ORCFNRY	MSC	Optimal Routing	Call Fwd No Reply	F	С	The OR due to Call Forward No Reply (ORCFNRY) register	S

		1					
						counts the number of Optimal	
						Routing (OR) due to Call	
						Forward No Reply (CFNRY).It is pegged at VMSC only before	
						sending RCH to GMSC for Call	
						Forward No Reply (CFNRY).	
ORCFNRC	MSC	Optimal	Call Fwd	F	С	The OR due to Call Forward Not	S
OROI WRO	Wico	Routing	No Reach	'		Reachable (ORCFNRC) register	J
		rtouting	110 Hodon			counts the number of Optimal	
						Routing (OR) due to Call	
						Forward Not Reachable	
						(CFNRC).It is pegged at VMSC	
						only before sending RCH to	
						GMSC for Call Forward Not	
		100"				Reachable (CFNRC).	_
TRKNPI	MSC	LO Call	Attempt	F	С	The Trunk Originated Call	S
						Attempt (TRKNPI) register	
						counts the number of Land	
ABNRMREL	MSC	Abnormal	Actv	F	С	Originated (LO) Calls Attempts. The Abnormal Releases for	S
ADINKIVIKEL	IVISC	Rel	Mobile	「		Active Mobile Calls	3
		1.01	Call			(ABNRMREL) register counts the	
						number of Abnormal Releases	
						for Active Mobile Calls. It is	
						pegged if call is released from	
						mobile side and cause of release	
						is other than NORMAL.	
NORMREL	MSC	Normal Rel	Actv	F	С	The Normal Releases for Active	S
			Mobile			Mobile Calls (NORMREL)	
			Call			register counts the number of CM	
						Service Requests for mobile	
						originated calls. It is pegged when a call is released with a	
						normal cause.	
CFNRYIMO	MSC	MO Call	No Reply	F	С	The CM Service Request for MS	S
		Fwd	invoke			originated calls (CFNRYIMO)	
						register counts the number of	
						Mobile Originated Call Forward	
						No Reply (CFNRY) Invokes.	
CFNRYILO	MSC	LO Call	No Reply	F	С	The Trunk Originated Call	S
		Fwd	invoke			Forward No Reply (CFNRY)	
						Invoke (CFNRYILO) register	
						counts the number of Land	
						Originated Call Forward No Reply (CFNRY) Invokes.	
RCHSUCMO	MSC	MO OR	Call	F	С	The Mobile Originated OR	S
1.CI IOOOIVIO	IVIOC	Resume	Handling	'		Resume Call Handling Success	
		110001110	Succ			(RCHSUCMO) register counts	
						the number of successful Optimal	
						Routing (OR) Resume Call	
						Handling (RCH) for mobile	
						origination is pegged before	
			 	<u> </u>	1	sending RCH_ACK to VMSC.	
RCHSUCLO	MSC	TO OR	Call	F	С	The Trunk Originated or Resume	S
		Resume	Handling			Call Handling Success	
			Succ			(RCHSUCLO) register counts the number of successful Optimal	
						Routing (OR) Resume Call	
						Handling (RCH) for trunk	
						origination. It is pegged before	
						sending RCH_ACK to the VMSC.	
CFBUDIMO	MSC	MO UDUB	Call Fwd	F	С	The Mobile Originated User	S
			invoke			Defined User Busy (UDUB) Call	
						Forward Invoke (CFBUDIMO)	

						register counts the number of	<u> </u>
						register counts the number of User defined User Busy (UDUB)	
						Call Forward Invokes for Mobile	
						Origination. It is pegged when	
						redirection cause is UDUB for a	
						call forward scenario.	_

						Routing (OR) due to User	
						Determined User Busy (UDUB)	
						Call Forward Busy (CFB). It is	
						pegged at VMSC only before	
						sending RCH to GMSC for Call	
MOETCAT	MSC	MO ETC	Attempt	F	С	Forward Busy (CFB). The MS Originated Establish-	S
WOLTOAT	IVIOC	WO L TO	Attempt	'		Temporary Connection (ETC)	
						Attempt (MOETCAT) register	
						counts the number of Establish	
						Temporary Connection (ETC)	
						Attempt for mobile originated	
						calls.It is pegged when MSC receives ETC message from	
						SCP.	
MOCTRAT	MSC	MO CTR	Attempt	F	С	The MS Originated Connect-to-	S
						Resource(CTR) Attempt	
						(MOCTRAT) register counts the	
						number of Connect To Resource	
						(CTR) Attempt for mobile	
						originated calls.It is pegged when MSCS receives CTR message	
						from SCP.	
MOCONAT	MSC	MO	Attempt	F	С	MS Originated Connect Attempt.	S
		Connect				(MOCONAT) register counts the	
						number of Connect Attempt for	
						mobile originated calls.It is	
						pegged when the MSCS receives	
						a CONNECT message from SCP.	
MORGBAT	MSC	MO	Attempt	F	С	The Mobile Originated Ringback	S
WORODAT	14100	Ringback	Attompt	'	~	Attempt (MORGBAT) register	~
		3,2				counts the number of Ringback	
						Attempts for mobile originated	
						calls. The register is pegged	

						when MSCS receives a	
						CONNECT message from SCP	
						with a ringback service request.	
TOETCAT	MSC	TO ETC	Attempt	F	С	The Trunk Originated ETC Attempt (TOETCAT) register counts the number of Establish Temporary Connection (ETC) Attempt for Trunk originated calls. It is pegged when the MSCS receives an ETC	S
TOCTRAT	MSC	TO CTR	Attempt	F	С	message from SCP. The Trunk Originated Connect- to-Resource Attempt (TOCTRAT) register counts the number of Connect To Resource (CTR) Attempts for trunk originated calls. It is pegged when MSCS receives a CTR message from SCP.	S
TOCONAT	MSC	TO Connect	Attempt	F	С	The Trunk Originated Connect Attempt .(TOCONAT) register counts the number of Connect Attempt for trunk originated calls. It is pegged when MSC receives CONNECT message from SCP.	S
TORGBAT	MSC	TO Ringback	Attempt	F	С	The Trunk Originated Ringback Attempt (TORGBAT) register counts the number of Ringback Service Attempts for trunk originated calls. It is pegged when MSCS receives a connect from an SCP with ringback service request.	S

Outstanding Issues:-

- The following Managed Objects of MSCS NSS20 are not supported in Prospect due to either missing sample data and/or vendor docs are not clear on its instance formation: IMEIDBOM, TRFOCT and CODECTI
- The following Managed Objects of MSCS NSS20 are missing in the sample data received for MSCS NSS20, however are supported in Prospect with assumption the instance id (i.e. <moid> tag) will follow the similar format of other OMs that are supported in given Prospect reporting entity: SIPCONG, SIPOFCWD, MSRNSTAT, GSMNPI2 and BCNIWFMU.

4 Known Problems

Please refer to the release notes for NortelGGU RP14 (4.0.14.0.0) for known issues

5 Upgrade Instructions

5.1 Prerequisites

This release requires a Prospect system running NortelGGU RP14 (4.0.14.0.0)

5.1.1 Network Timeouts

If your system has a security policy in place such that a session is disconnected after a lengthy period of apparent inactivity, you should disable it during this upgrade. The upgrade can take a few hours to run and requires no user input during the majority of the upgrade. This can make the upgrade session appear idle. If timeouts are not disabled, the upgrade terminal could be disconnected during the upgrade.

5.1.2 Disk Space and Table Space Requirements

Check the disk space under /u01 for sufficient space. The installation of the patch requires additional 17 MB disk space under /u01 file system.

The install script also requires that at least 10% of total tablespace size is available for each tablespace. Please contact customer support if there is less than 10% of total tablespace available for any of the tablespaces.

5.1.3 XDK

The Oracle Database must have XDK installed. Log into the database using SQL*Plus:

```
$ sqlplus $DB CONNECT
```

Please use the following sql statement to check if the XDK is installed accordingly. Oracle XDK for Java should be there in the result. The version must be 9.2.0.x.

5.1.4 Perl Version

Make sure that /usr/bin/env perl is version 5.6.1. Type the following command:

```
$ /usr/bin/env perl -v
This is perl, v5.6.1 ...
```

If either version is wrong, especially if it is earlier than required, some scripts might not run, or might produce incorrect results.

5.1.5 Java Version

Make sure that the java is version 1.4.2 and above. Type the following command to check the java version.

```
$ java -version
```

```
java version "1.4.2_05"

Java(TM) 2 Runtime Environment, Standard Edition (build
1.4.2_05-b04)

Java HotSpot(TM) Client VM (build 1.4.2 05-b04, mixed mode)
```

If either version is wrong, especially if it is earlier than required, some scripts might not run, or might produce incorrect results.

5.1.6 Checking Environment Variables

Execute the following command to verify that the environment variables LOG and OK are NOT set to anything:

```
$ echo $LOG $OK
```

<- default setting should be empty
</p>

If the above environment variables are set, please unset the environment variables as below:

5.1.7 Baseline Requirements

The base environment that this release will be applied against:

 Prospect® 8.0 for Nortel GSM/GPRS/UMTS 4.0.14.0.0.2 (either a fresh install or an upgrade from an earlier release)

You can check this by running the following command as the Prospect UNIX user:

```
$ show installed
```

The output will look something like this (Base is 4.0.14.0.0.2 fresh install):-

COMPONENT	INSTALL_TY	INSTALL_DATE
CORE Prospect rev 8.0.4.1 b5	INSTALL	07-MAR-06 17:57:53
VENDOR NorGPRS_Core rev 4.0.14.0.0 b2	INSTALL	07-MAR-06 19:16:36
VENDOR NorGPRS_Radio rev 4.0.14.0.0 b2	INSTALL	07-MAR-06 19:23:52
VENDOR NorGSM rev 4.0.14.0.0 b2	INSTALL	07-MAR-06 18:31:09
VENDOR NorHLR_Univity rev 4.0.14.0.0 b2	INSTALL	07-MAR-06 20:06:02
VENDOR NorUMTS RAN rev 4.0.14.0.0 b2	INSTALL	07-MAR-06 19:44:44

The versions (rev) of CORE Prospect and VENDOR module must be greater than or equal to those shown. The build number (b1) and install type (INSTALL or UPGRADE) for each component is unimportant. The install dates will be different from those shown.

Important! It is critical that you apply this patch to an environment at the correct patch level. Please verify the environment carefully. For more information, please contact customer support.

5.2 Installation Privileges Required

The following privileges are required for an upgrade.

Privilege	Required
UNIX flexpm user in DBA group	Yes
Root privilege required	No
Oracle sys user password set to default (change_on_install)	Yes

5.3 Pre-Installation Instructions

5.3.1 System Backup

This patch cannot be uninstalled. This upgrade involves updates to the database and the metadata; therefore recovery from backup is the only way to reverse the changes made by this upgrade. You must perform a full system backup before installing this upgrade. If needed, please refer to the "Backing up the Database" section of the *Prospect Administration Guide*. Please contact customer support if you require further support.

5.3.2 Note schedule_maint Settings

If the server is down for an extended period of time the script schedule_maint could display some jobs as not scheduled. Thus the jobs will not run and the system will fail.

Before the upgrade, run schedule_maint to get a list of the current schedule settings. Make a note of the next run time of each job.

5.3.3 Note Partition Maintenance Settings

During the upgrade a number of new tables are added to the Prospect system. Occasionally this can cause the script <code>past_part_maint.sh</code> to display data retention settings as "Unlimited."

Before the upgrade, run past_part_maint.sh to get a list of the current data retention settings.

5.3.4 Oracle Sys Account Access

Prospect 8.0 requires that all logins using the sys account must be qualified as sysdba. The following Oracle changes may be required.

1. Telnet to Prospect server from a remote system to verify if the change is needed. After connect to Prospect server, try to log in using sqlplus:

```
$ sqlplus /nolog
SQL> connect sys/change_on_install@flexpm as sysdba
If you can log in, you can skip the rest of this procedure.
```

If you get an error concerning privileges, then you need to continue with the following steps.

2. Set the remote_login_passwordfile parameter in the init<sid>.ora file. On most Prospect systems the sid is flexpm. Log in as the oracle user, and then enter the following command.

```
$ cd $ORACLE BASE/admin/flexpm/pfile
```

3. Edit the init<sid>.ora file (for example, initflexpm.ora) and add the following line.

```
remote login passwordfile=EXCLUSIVE
```

4. Create the Oracle password file to allow remote sys access. While still logged in as the oracle user verify that \$ORACLE_HOME and \$ORACLE_SID are correct, then enter the following command.

```
$ orapwd file=${ORACLE_HOME}/dbs/orapw${ORACLE_SID} \
password=change on install entries=10
```

- 5. Bounce the database so that the parameter and password file take effect. If you get an error concerning the password file, verify that it is in the dbs directory and that the filename is orapwflexpm.
- 6. To verify that the changes have taken effect, repeat step 1.

5.4 Installation Instructions

- If this Prospect system is associated with a Prospect Web system, it is advisable to use the Prospect Web Administration Tool to disable the datasource associated with this Prospect system. See the Prospect Web Administration Guide for more information.
- 2. Log in as user flexpm
- 3. Stop the middleware before installing the patch.

```
$ ps-mgr stop all
$ ps-mgr halt
```

4. Download and copy the TAR package to be installed on to the appropriate Prospect Server into a staging directory, for example,

```
$ mkdir -p /var/tmp/4.0.14.0-TIV-PROSPECT-NORGGU-IF0010
```

5. cd to the staging directory

```
$ cd /var/tmp/4.0.14.0-TIV-PROSPECT-NORGGU-IF0010
```

6. Untar the TAR package using the following command:

```
$ tar -xvf 4.0.14.0-TIV-PROSPECT-NORGGU-IF0010.tar
```

7. Check the environment setting for WM_PRODUCT. The WM_PRODUCT variable should be pointing to PROSPECT.

```
$ env|grep WM_PRODUCT
WM PRODUCT=PROSPECT
```

If the value is different, add the below statement to the .profile

```
export WM_PRODUCT
WM_PRODUCT="${WM_PRODUCT:=${wm_product}}}";
```

Logout from the terminal and login as flexpm user again. Grep the WM_PRODUCT variable again and it should be pointing to PROSPECT.

8. Run the installation tool preview option by typing the following command, examine the log for any abnormal message. Please contact customer support if you need any help.

```
$ ./wminstall -b $FLEXPM_BASE -i ProspectBase -portbase $PORT GROUP -d $DB CONNECT -core spec core.spec.9i -v -preview
```

9. The output of the command line should be same as the following. You should check the line that have UPGRADE word:

If the output from the preview contains no errors, install the application by running the same command again, but without the -preview option.

```
$ ./wminstall -b $FLEXPM_BASE -i ProspectBase -portbase
$PORT GROUP -d $DB CONNECT -core spec core.spec.9i -v
```

10. A license agreement is displayed. Use the scroll bar to read the complete text if it does not display in the window. Enter yes (case sensitive) to continue with the installation. The installation aborts if you do not enter yes.

Note:

The installation of the upgrade might take a while to complete, the log file (with filename like <YYYY> $_-<$ MM> $_-<$ DD> $_-<$ HH> $_-<$ MM> $_-<$ SS>) under /var/tmp can be viewed from another console during the installation for the installation progress. The date changes as each module installs.

```
After wminstall is completed, examine the detail.log under the directory $FLEXPM_HOME/audit/<
YYYYY>__<MM>__<DD>__<HH>__<MM>__<SS>__<running_number> for any error messages.
```

5.5 Post-Installation Instructions

5.5.1 Re-source the Profile

After the install finishes, log out and log back in as flexpm, if you have not done so already.

5.5.2 Check for invalid objects

After an upgrade finishes, it is useful to check for any invalid objects in the database. Log into the database using SQL*Plus:

```
$ sqlplus $DB_CONNECT
SQL> select object_type, object_name from user_objects where
status='INVALID' and object_type<>'VIEW';
This should produce the output:
no rows selected
```

If the above SELECT statement outputs some rows, please recompile the schema. Use the correct value for schema name if it differs from below:

```
SQL> execute dbms_utility.compile_schema('schema_name',FALSE);
If your schema_name is FLEXPM, you can use the command as below:-
SQL> execute dbms utility.compile schema('FLEXPM',FALSE);
```

5.5.3 Installed Version Verification

It is helpful to run show installed, to confirm that everything is installed correctly.

The following registered entries will be updated and shown as:

```
COMPONENT INSTALL_TY INSTALL_DATE

"
"
VENDOR NorGPRS_Core rev 4.0.14.0.10 b4 UPGRADE 08-JUN-18 14:29:57

VENDOR NorGSM rev 4.0.14.0.10 b4 UPGRADE 08-JUN-18 14:39:58
```

The VENDOR modules for NorGPRS_Core and NorGSM should be at 4.0.14.0.10 b4 respectively.

The version numbers (rev) should be the same as those shown. The install type (INSTALL, PATCH or UPGRADE) is not important. The install dates and times will be different from those shown.

5.5.4 Configure Time Zone Region

For further information on Time Zone Regions please refer to the Prospect Administration Guide.

This can be configured as follows:

1. Review your current Time Zone Region. If your time zone information is correct, skip to 5.5.5.

```
$ set_tzr.sh -t
Connected.
Greenwich Mean Time
```

2. Review the list of available Time Zone Regions:

```
$ timezoneregion.sh -t

Connected.

America/Anchorage -540 [1] First Sunday on or after Mar 8 at 02:00 ... First Sunday in Nov at 02:00, 60 minutes

America/Buenos Aires -180

America/Caracas -240

America/Chicago -360 [1] First Sunday on or after Mar 8 at 02:00 ... First Sunday in Nov at 02:00, 60 minutes

America/Denver -420 [1] First Sunday on or after Mar 8 at 02:00 ... First Sunday in Nov at 02:00, 60 minutes

America/Honolulu -600

America/Indianapolis -300
```

```
America/Lima Peru -300
America/Mexico City -480 [1] First Sunday on or after Mar 8 at 02:00 ... First Sunday in Nov at 02:00, 60 minutes
America/New York -300 [1] First Sunday on or after Mar 8 at 02:00 ... First Sunday in Nov at 02:00, 60 minutes
America/Noronha -120
```

3. Set your Time Zone Region using one of the existing options:

```
$ set_tzr.sh -n "America/Seattle"
Connected.
OK: America/Seattle
```

5.5.5 Start the Middleware

Once the installation has been completed, you should start the middleware so that data can be loaded and the system can be used.

- 1. Log in as user flexpm, if you are not already logged in.
- 2. Start the middleware.

```
$ ps-mgr init
```

5.5.6 Check schedule settings

After the middleware has been restarted, run schedule_maint to check the next run time of the scheduled jobs. If any of the jobs display the next run time as "job not scheduled," then run schedule_maint and update the values to an appropriate future time based on the settings you recorded in Section 5.3.2.

For example, to set the <code>pm_daily job</code> to run at 1:00 am on 1 May 2006.

```
schedule maint pm daily 20060501 0100
```

Note: Remember to enter a time in the future. If unsure of appropriate times then please contact customer support

5.5.7 Check partition settings

Run past_part_maint.sh to get a list of the current data retention settings. If any of the number displays is different that settings you recorded in Section 5.3.3, then run past part maint.sh to update the values.

For example, to have 30 days data retention for traffic table types.

```
past part maint.sh traffic 30
```

5.5.8 Enable Datasource in Prospect Web

If this Prospect system is associated with a Prospect Web system and you disabled the datasource in section 5.4 step 1, then use the Prospect Web Administration Tool to enable the datasource with this Prospect system.

5.6 Uninstallation Procedure

This patch cannot be uninstalled. It involves updates to the database or the metadata, therefore recovery from backup is the only way to reverse the changes made by this release/patch. You must perform a full system backup before installing this patch. If needed, please refer to the "Backing up the Database" section of the *Prospect Administration Guide*. Please contact customer support if you require further support.

6 Useful Hints

6.1 Prospect Client/Server Compatibility

The Prospect client is backward compatible with older Prospect servers. If you try to use an older client with newer server, the results are undefined.

6.2 Prospect Single Client

This release features a single, uniform client for all vendor versions.

Users of the Prospect system have expressed the need to connect to all of their Prospect servers with a single client. Several customers have installed multiple Prospect servers, which cover several different vendor technologies. Two key benefits to the single client are:

- Reduced number of clients that your IT department need to install
- Reduced confusion among users over which Prospect client should be used with which Prospect server.

The single Prospect client supports Prospect servers co-released with the client and a defined number of server versions released before the client. Prospect servers released after the client are not supported (that is, the Prospect client is not forward-compatible). Contact your Vallent customer support representative to identify the server versions that your client supports.

This feature removes support for two or more Prospect clients installed on the same PC. Side-by-side installations were originally supported because the Prospect client was not backward compatible with older versions of the server. Full support for backward compatibility removes the need for side-by-side support.

6.3 Ports Used by the Prospect Client

The Prospect client uses two ports to connect to the Prospect server:

- **FX port** Most queries from the Prospect client, status monitor, Auto Downloader, and DSMonitor (DSMonitor is a process that registers for updates from the DataServer) use this port. By default the FX port number is the base port plus four (4). For example, if the base port is 6440, the FX port would be 6444.
- Event port DSMonitor and Prospect Alarm use this port. By default the Event port number is the base port plus three (3). For example, if the base port is 6440, the Event port would be 6443.

If you have closed the ports required by the Prospect client for security reasons, or if you are using these ports for other services, you need to either re-open or re-assign them to the Prospect FX and Event ports. Otherwise, the ability for the Prospect client to be able to communicate with the Prospect server is compromised.

To determine which port numbers are required for your system, log on as flexpm and run the following commands:

```
$ echo $FX_DS_PORT
$ echo $EVENT PORT
```

6.4 add_filetype_timeout.sh

The add_filetype_timeout.sh script is not recommended to be used for checking the data file if it does not arrive as expected. If used, user will have to wait for a very long period of time as the add_filetype_timeout.sh script increases the time to clean up the schedule table when the middleware is started up.

7 Customer Support

Contact customer support if a problem is encountered during the installation of this patch or release.

8 Manifest

Please refer to manifest.txt in the staging directory.
