

# 持續部署，加快交付-- UrbanCode 靈活部署搶先 上市

**Joseph Chang**  
*Rational Specialty Architect*  
*changhs@tw.ibm.com*

**2014 IBM 開發者大會**  
**開發速戰，行動速決!**

# IBM DevOps : 通過軟體驅動創新的產品和軟體持續交付方法

企業通過持續的軟體交付能力，抓住市場機會，縮短獲得客戶回饋的時間。

加快軟體的交付  
更快地實現價值

持續的監控 

在速度,成本,品質  
和風險間取得平衡  
提高創新能力

持續客戶反饋  
和優化 

縮短客戶回饋  
的時間  
改善客戶體驗

持續的業務規劃

協同合作開發

持續的測試

持續的發佈和部署

# 企業勝出的關鍵— 透過軟體, 驅使商業應用的創新

## 海量資料

Insights on new products by more efficiently interpreting massive quantities of data

## 雲端

Demand for apps requires fast, scalable environments for dev and test, as well as production

## 社群 Business

Broader set of stakeholders collaborates to deliver continuous innovation and value

## 行動裝置

Modern workforce expects constantly updated software to connect to enterprise systems

## 物聯網設備

Industry requirements demand faster response to regulations and standards, with traceability and quality

## API Economy

Software component in smart products driving increased value and differentiation

Software delivery

加速軟體交付能力, 讓你的企業保持領先優勢, 搶佔市場, 創造更豐富的營收

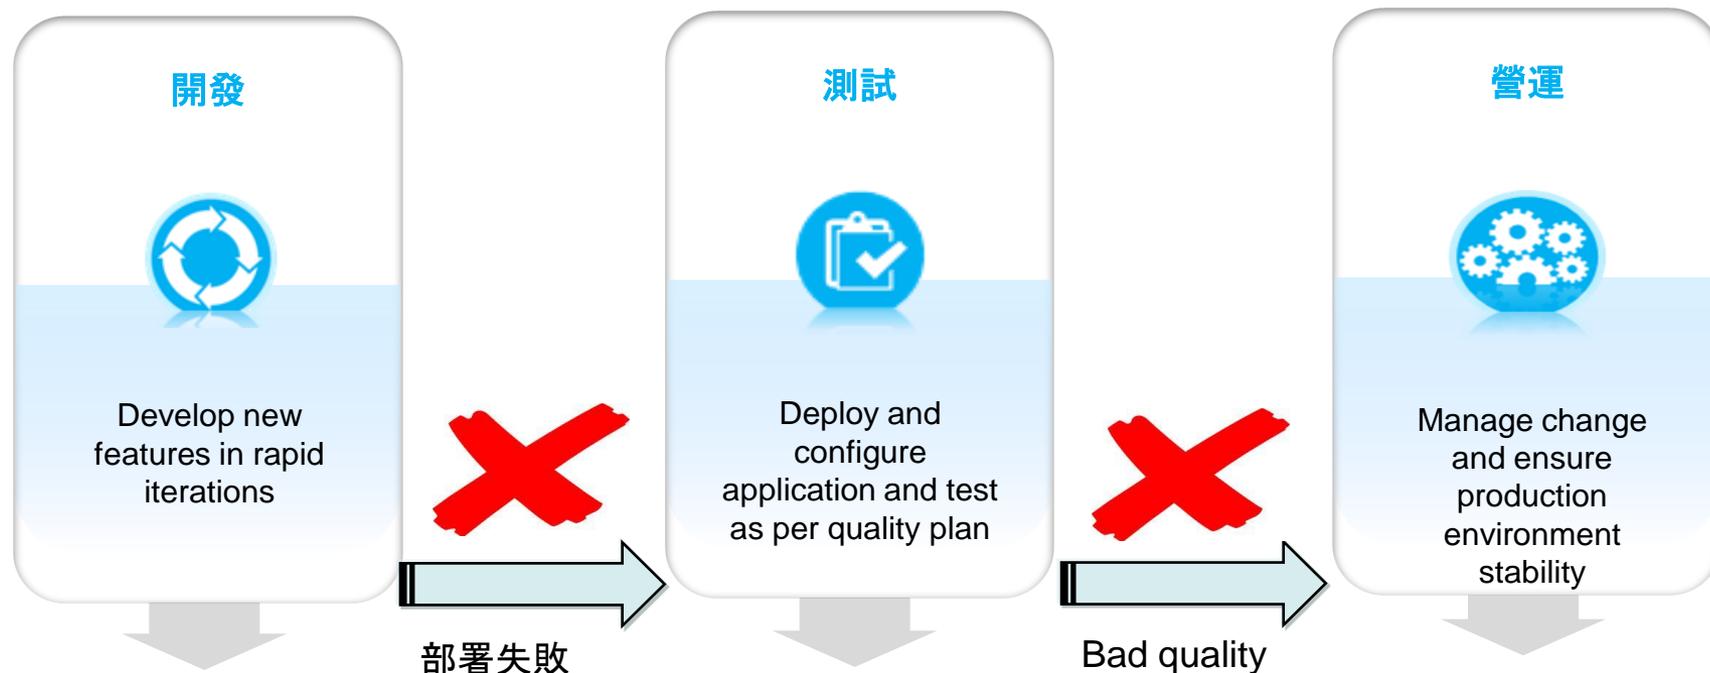

# 現況--許多企業仍舊依靠手動方式進行部署

- 開發人員與系統管理員透過email及file shares 交接
- Developers, QA, 及 Ops 用不同的方式在維護/部署
- 開發人員與系統人員出了問題時才緊急密切連繫
- 部署步驟寫成厚厚一本文件
- “週末部署” 變成大家習慣的名詞
- 開發人員知道營運環境的 passwords

## 結果導致:

- 部署非常緩慢
- 在Dev, QA, Prod 環境的執行結果不一致
- 部署到營運環境時失敗
- 權限管控不當, 未管制誰?什麼時間?從什麼工具?發佈了什麼內容?

# 手動開發、測試 部署所造成的影響

缺乏與營運環境相近的環境，導致在部署到營運環境是不預期的錯誤以致交付延誤

手動設定導致安裝測試環境的時間延誤，讓能夠執行測試的時間變少，因而影響品質

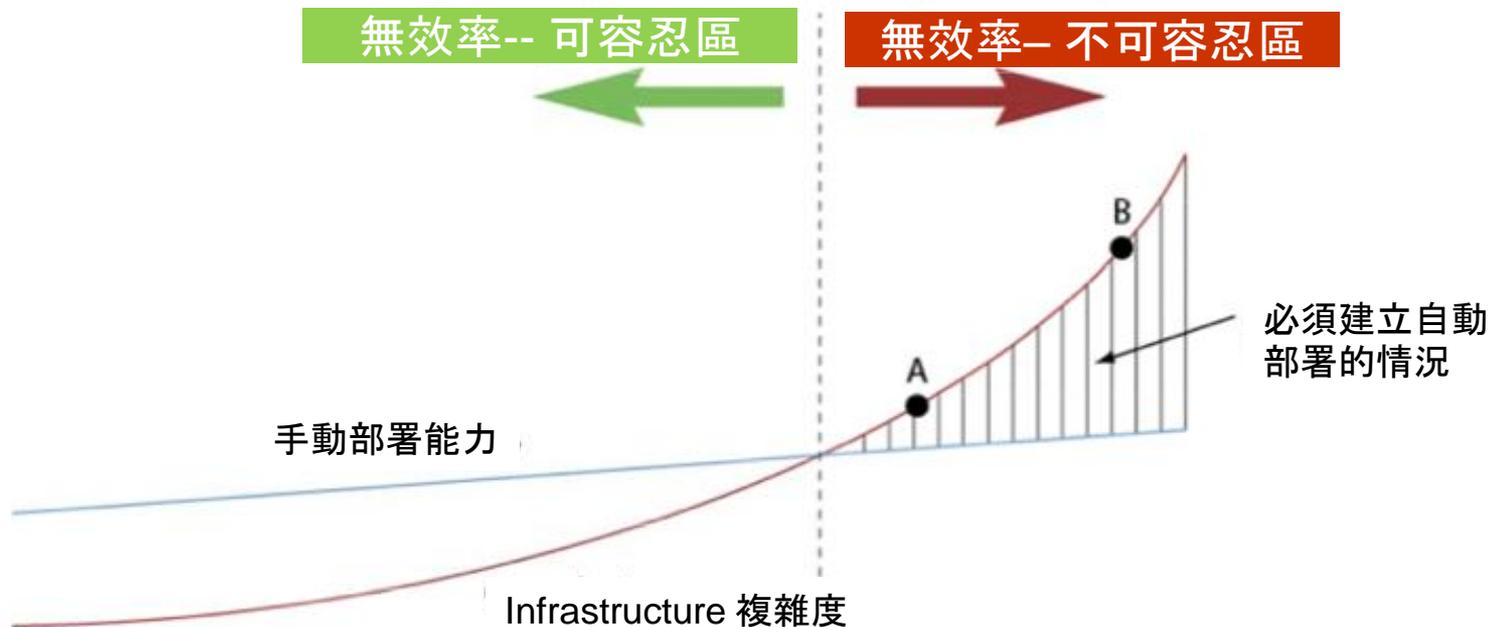

太多測試環境申請請求，減少了系統管理員花在營運環境的時間，影響到線上系統品質

# 挑戰 -- Infrastructure的複雜性愈來愈高，愈來愈難用手動部署的方式掌控

簡單的環境

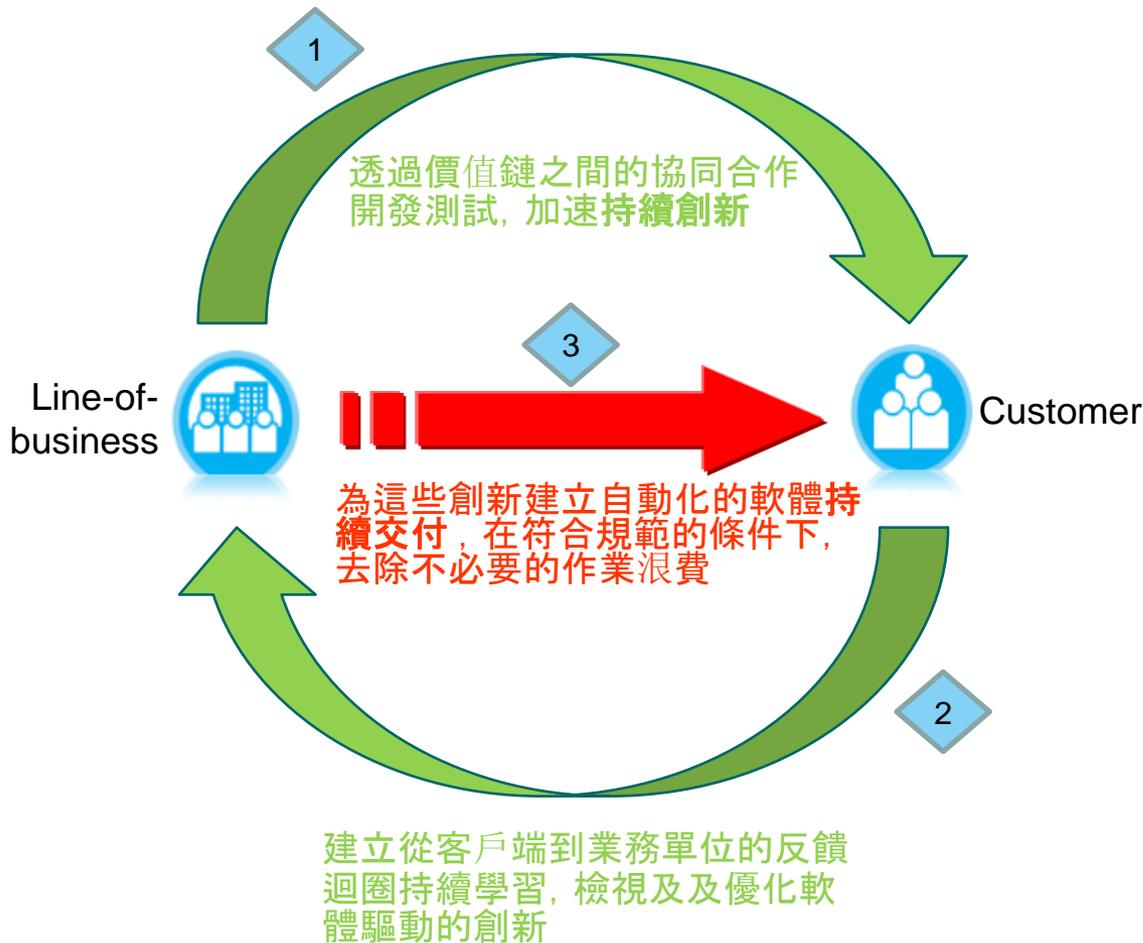

大規模、複雜環境

Gartner 的報告發現大部份的IT 人員他們的環境屬於“非常複雜” (50%), 或“無法控制” (17%)

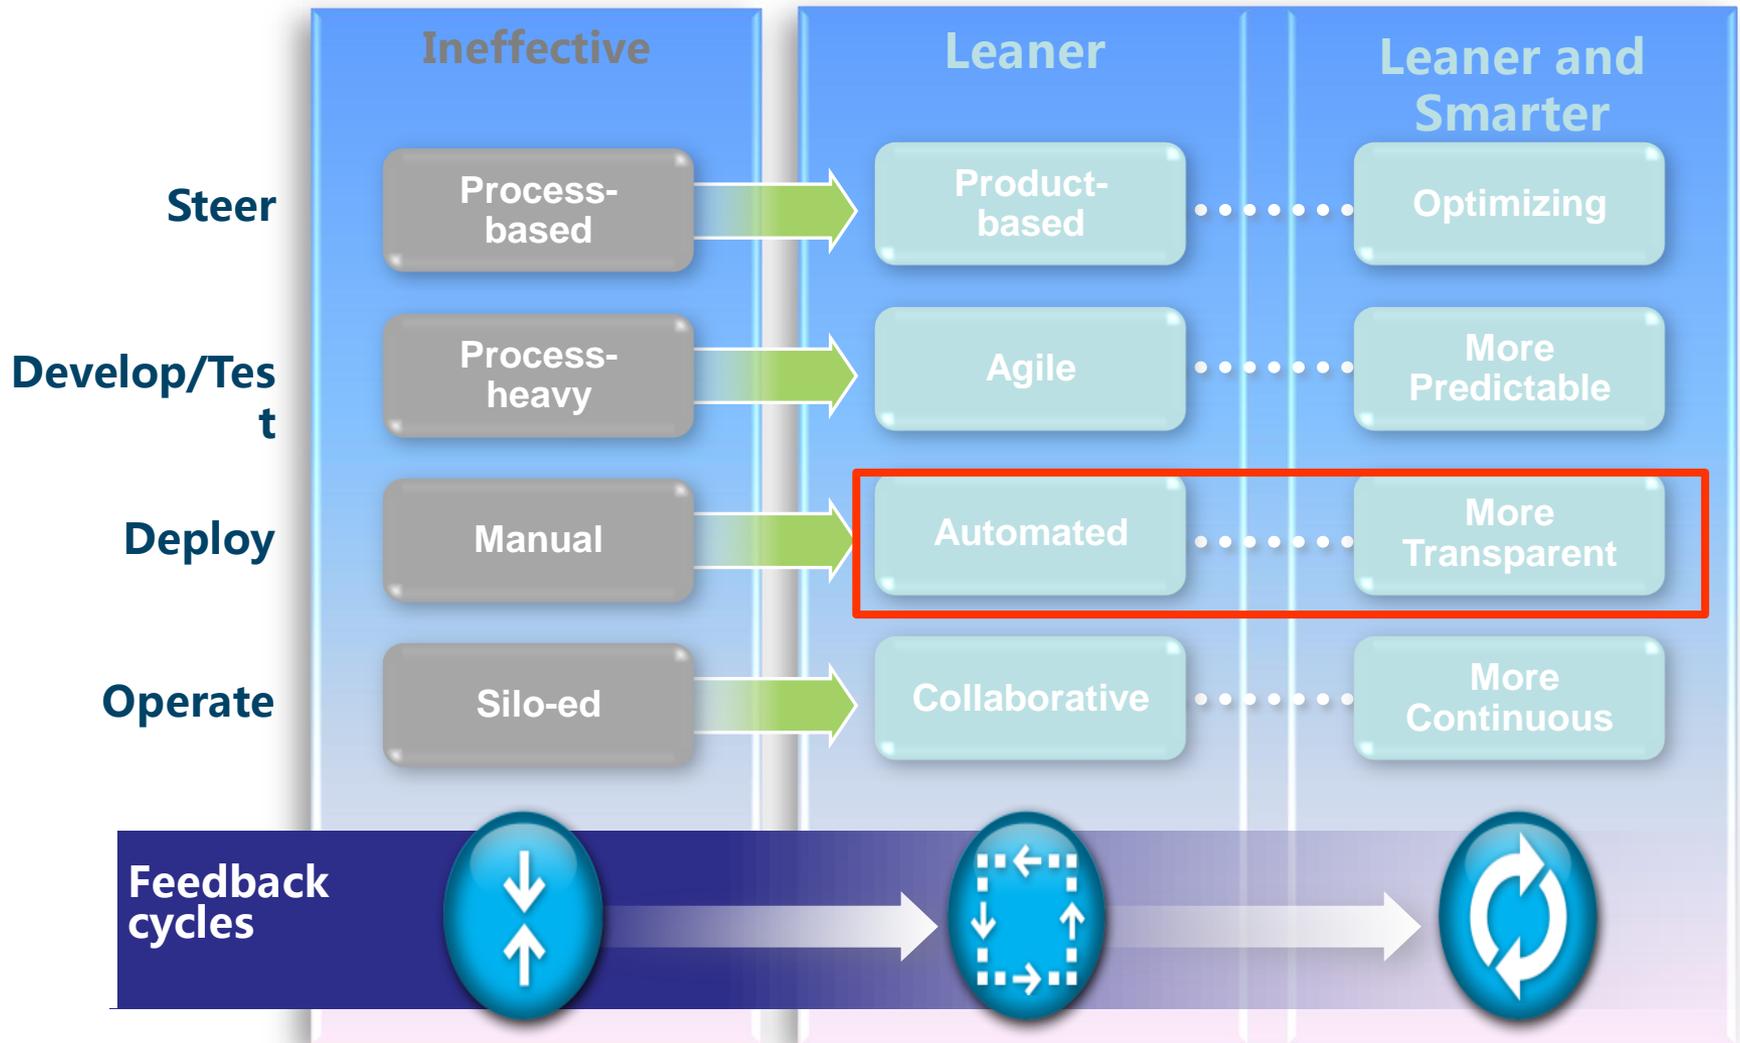

\* 資料來源: “Catalysts Signal the Growth of DevOps” Cameron Haight - Gartner Feb 2012 . I performed the calculations.

# DevOps approach: Lean 的指導原則

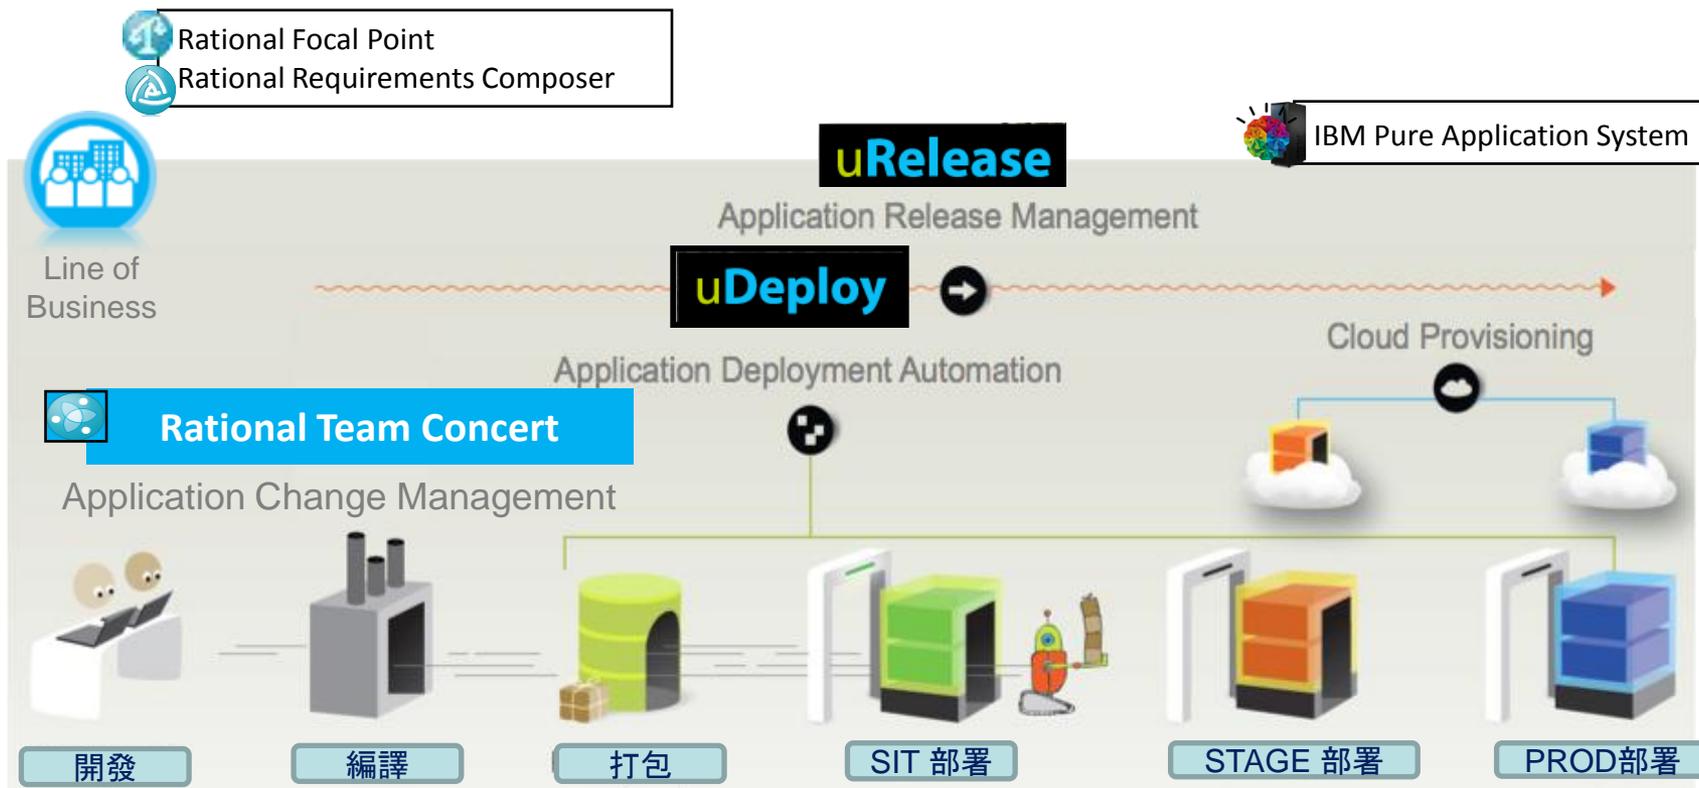

- 去除任何對於學習使用者想要的東西無關的活動。
- 去除因為人工作業等待及耽擱的時間，以及只靠口耳相傳的技術知識。
- 讓知識工作者，業務分析師，開發人員，測試人員，及其它領域的專家能夠專注在創造性的工作。

# 透過持續反饋，改進交付的有效性

# 實踐DevOps 的工具鏈

- Rational Software Architect
- Rational Developer for z
- Rational Developer for I
- Rational Developer for AIX

- Rational Quality Manager
- Rational Test Workbench
- Rational Test Virtualization Server

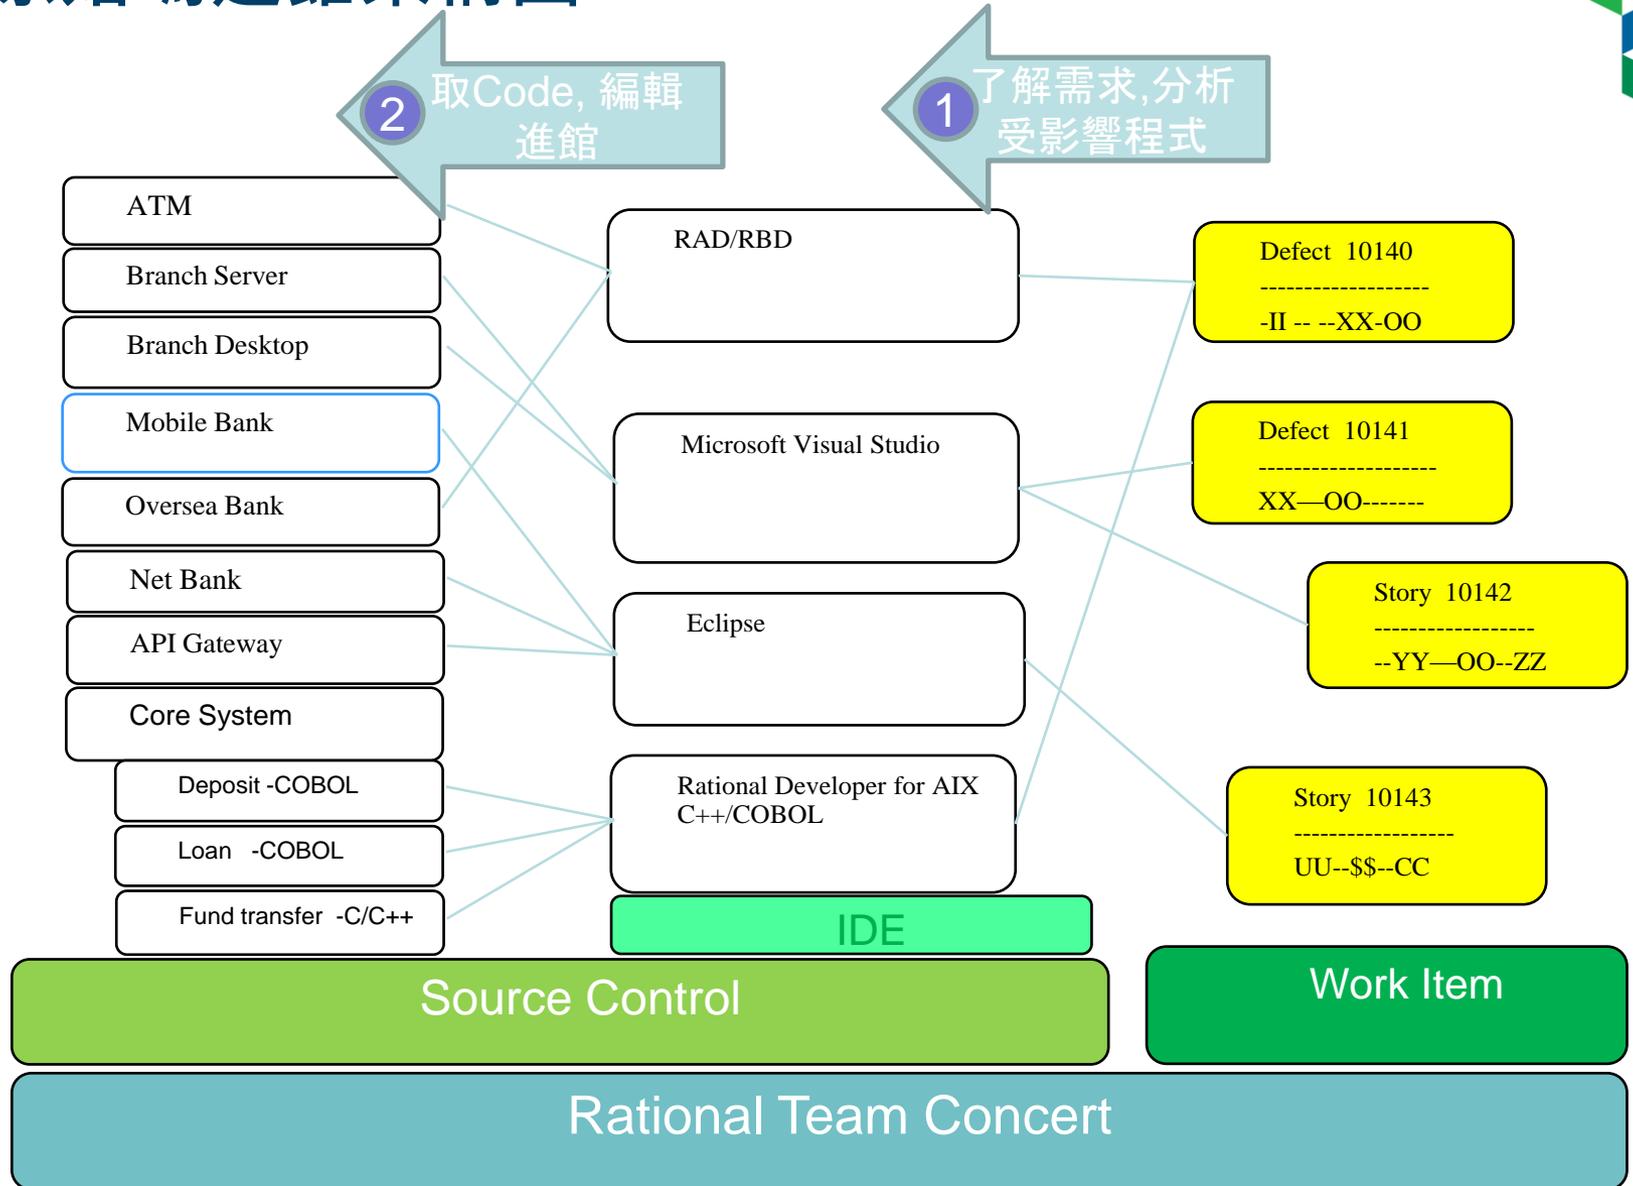

# 自動化部署工具的考量要件

異動記錄追蹤 Defect/Task Tracking	<ul style="list-style-type: none"><li>▪ Record the original requirement for the change</li><li>▪ Track the reason why the source code is changed</li></ul>
源代碼版本控管 Source Code Control	<ul style="list-style-type: none"><li>▪ Control the concurrent access to the source</li><li>▪ Keep the historical version of source code</li></ul>
自動化編譯 Automated Build	<ul style="list-style-type: none"><li>▪ Automatic build in one script</li><li>▪ Build report with compile/testing log, source changed.</li></ul>
自動化的單元步驟 Automated Process	<ul style="list-style-type: none"><li>▪ Single script reused across environments</li><li>▪ Controlled access to deployment steps</li></ul>
系統整體的部署流程 Coordinating Tiers	<ul style="list-style-type: none"><li>▪ A model for the entire system</li><li>▪ Standard deployment based on changes to all pieces and parts</li></ul>
環境定義 Environment Definitions	<ul style="list-style-type: none"><li>▪ Environments as a first-level entity</li><li>▪ Properties controlled at the environment level</li></ul>
部署標的儲存庫 Artifact Repository	<ul style="list-style-type: none"><li>▪ Definitive library – single source of truth</li><li>▪ Automated retention policy based on deployments</li></ul>
存取控制 Access Control	<ul style="list-style-type: none"><li>▪ Role-based access control by environment</li><li>▪ Secure storage of sensitive values (e.g. passwords)</li></ul>
稽核的軌跡 Audit Trail	<ul style="list-style-type: none"><li>▪ Auto record what happened</li><li>▪ Know “who”, “what”, “where” and “when”</li></ul>

# 自動化部署的環境設定

## Configuration

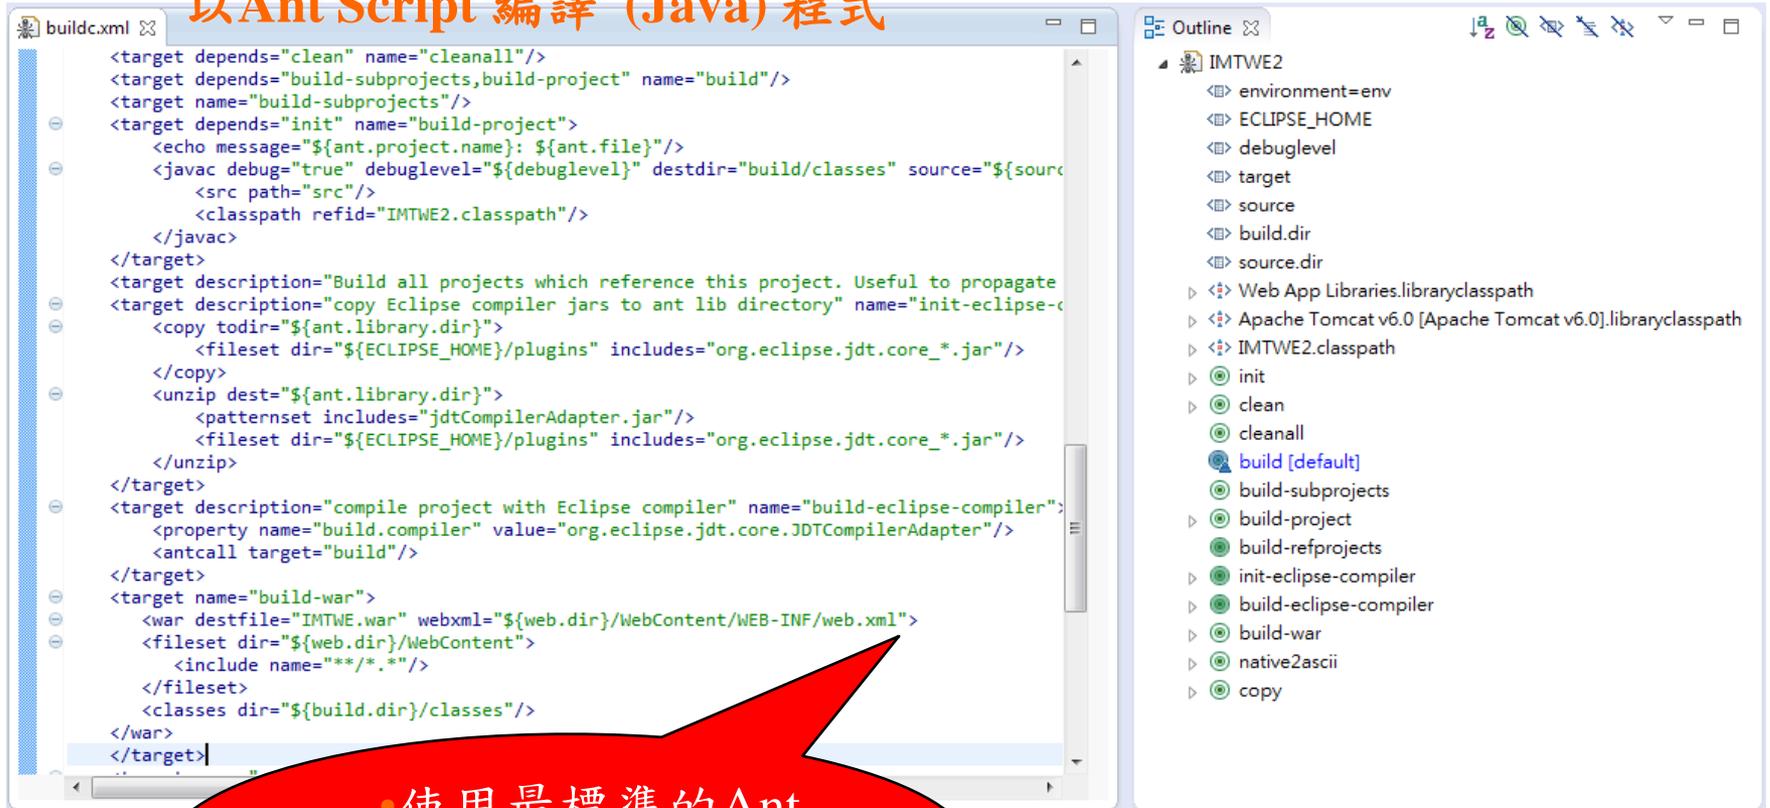

# 編譯及發佈設定

## Ant -- Java 編譯

# 編譯腳本撰寫

## 以Ant Script 編譯 (Java) 程式

The screenshot displays an IDE with two main panels. The left panel shows the content of a file named 'buildc.xml', which is an Ant build script. The script defines several targets: 'cleanall', 'build', 'build-subprojects', 'build-project', 'init-eclipse-compiler', 'build-eclipse-compiler', 'build-war', and 'copy'. The 'build-project' target uses the 'javac' task to compile Java source files. The 'init-eclipse-compiler' target copies Eclipse compiler jars to the Ant library directory. The 'build-war' target uses the 'war' task to create a web application archive. The right panel shows the 'Outline' view, which lists the project structure and the targets defined in the script. The 'build' target is highlighted as the default target.

```
<target depends="clean" name="cleanall"/>
<target depends="build-subprojects,build-project" name="build"/>
<target name="build-subprojects"/>
<target depends="init" name="build-project">
  <echo message="${ant.project.name}: ${ant.file}"/>
  <javac debug="true" debuglevel="${debuglevel}" destdir="build/classes" source="${source}"
    <src path="src"/>
    <classpath refid="IMTWE2.classpath"/>
  </javac>
</target>
<target description="Build all projects which reference this project. Useful to propagate
  <target description="copy Eclipse compiler jars to ant lib directory" name="init-eclipse-c
    <copy todir="${ant.library.dir}"/>
    <fileset dir="${ECLIPSE_HOME}/plugins" includes="org.eclipse.jdt.core_*.jar"/>
  </copy>
  <unzip dest="${ant.library.dir}"/>
    <patternset includes="jdtCompilerAdapter.jar"/>
    <fileset dir="${ECLIPSE_HOME}/plugins" includes="org.eclipse.jdt.core_*.jar"/>
  </unzip>
</target>
<target description="compile project with Eclipse compiler" name="build-eclipse-compiler">
  <property name="build.compiler" value="org.eclipse.jdt.core.JDTCompilerAdapter"/>
  <antcall target="build"/>
</target>
<target name="build-war">
  <war destfile="IMTWE.war" webxml="${web.dir}/WebContent/WEB-INF/web.xml">
    <fileset dir="${web.dir}/WebContent">
      <include name="**/*.xml"/>
    </fileset>
    <classes dir="${build.dir}/classes"/>
  </war>
</target>
</target>
```

Outline:

- IMTWE2
  - environment=env
  - ECLIPSE\_HOME
  - debuglevel
  - target
  - source
  - build.dir
  - source.dir
  - Web App Libraries.libraryclasspath
  - Apache Tomcat v6.0 [Apache Tomcat v6.0].libraryclasspath
  - IMTWE2.classpath
  - init
  - clean
  - cleanall
  - build [default]
  - build-subprojects
  - build-project
  - build-refprojects
  - init-eclipse-compiler
  - build-eclipse-compiler
  - build-war
  - native2ascii
  - copy

• 使用最標準的Ant Script 建立編譯腳本

內建數十種平台的部署精靈，只須設定，不須撰寫部署腳本

# Snapshot上版

當多個元件的版本有相依性時  
可用Snapshot  
上版

# uRelease – Release 計劃與跨部門協調

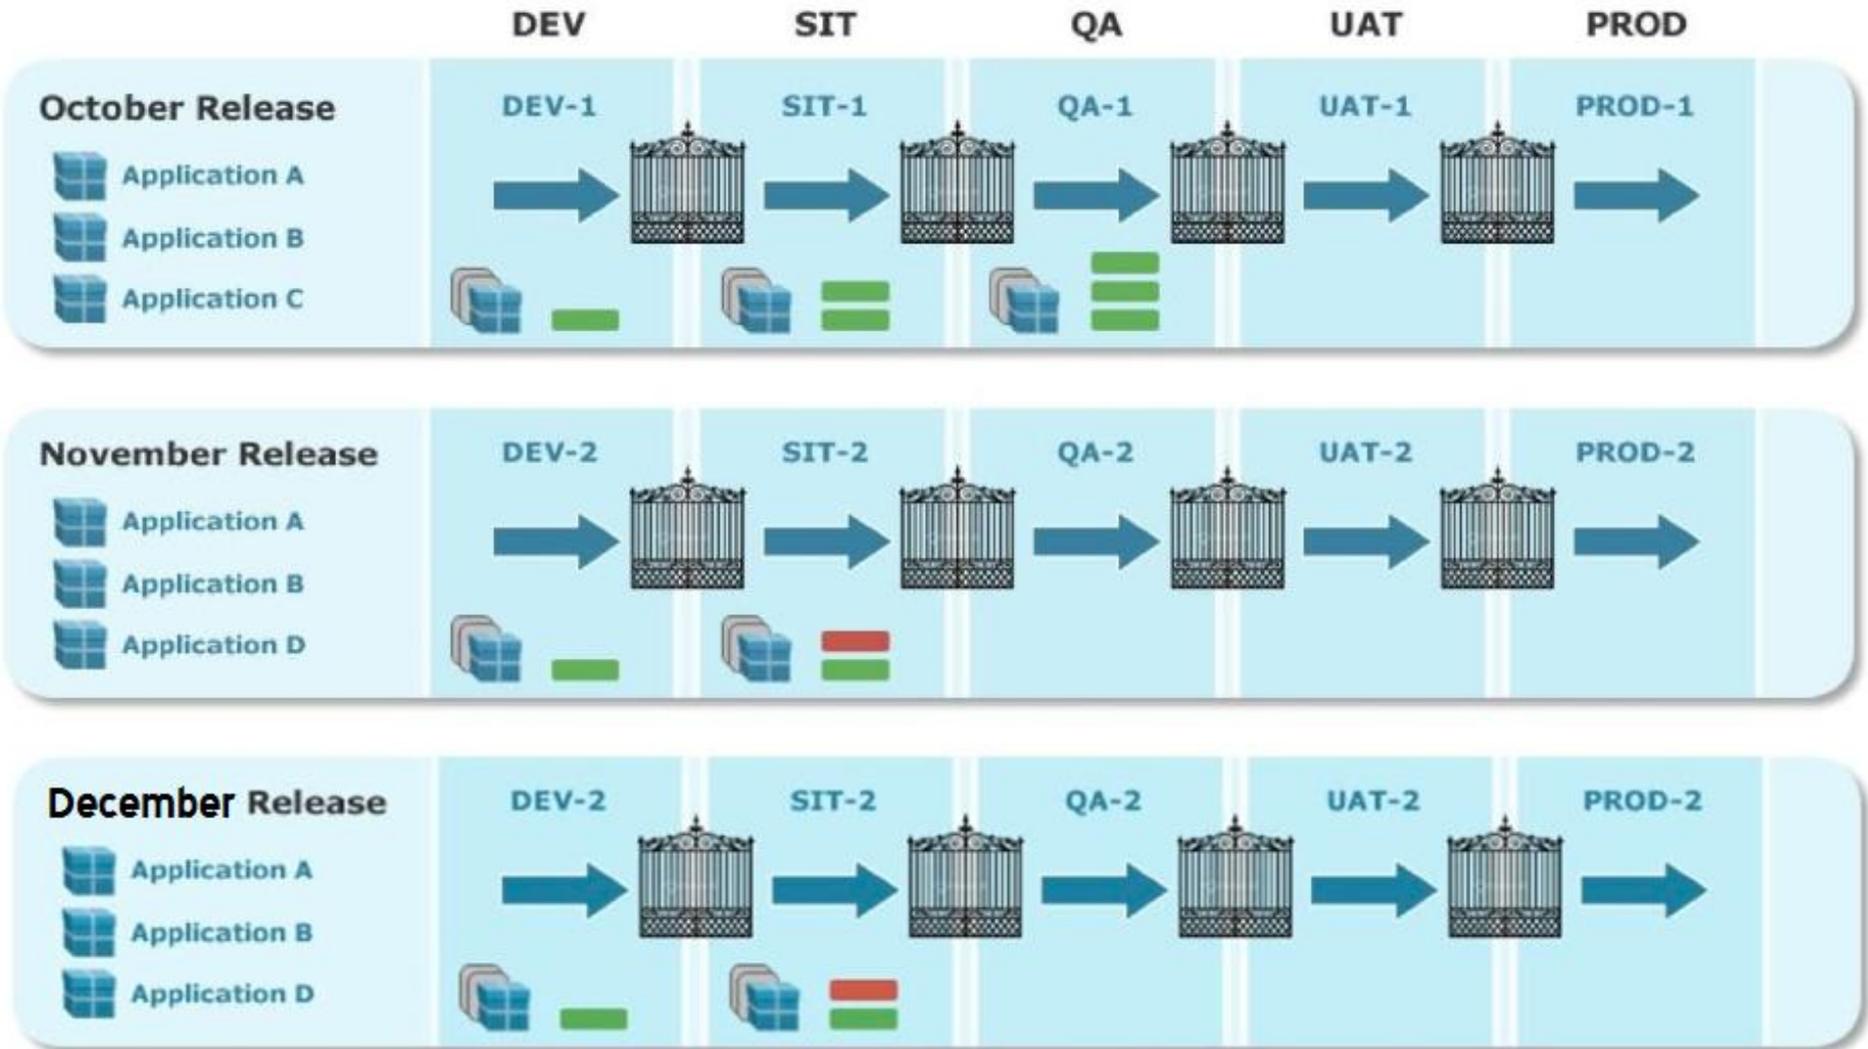

如果遇到大規模上版時，可能需要AP Team, 作業部, 網路部, 資安部, 管制部門的配合，這時可透過uRelease 來協助。

The screenshot displays the uRelease interface for a deployment plan. At the top, it shows 'uRelease Deployments' and user information 'Otto Ops help logout'. The main heading is 'Scheduled Deployments > Pets Online 1.1.x:PROD-1 at Mon Jun 03 04:00:00 UTC 2013'. Below this, there are two tabs: 'Execution & Deployment Plan' (selected) and 'Contents & Notifications'. The 'Deployment Plan' section includes an 'Abort Deployment' button and status filters: Empty, Not Started, In Progress (selected), Failed, Aborted, and Complete. A 'Time Remaining' counter shows 00:01:04. A 'Percent Complete' pie chart shows 29%. 'Waiting / Late Tasks' lists 'Configure Something' (2 Mins Late) and 'Update server.properties' (Waiting). 'Task Count' shows: Planned: 13, Waiting: 1, In Progress: 1, Total Remaining: 15, Not Applicable: 0, Skipped: 0, Complete: 3, Failed: 0. The deployment plan is broken down into tasks: 'Prep & Verify Readiness' (100% Complete, 0h 10m), 'Middleware Config' (0% In Progress, 0h 03m), 'Bleed Over Sequence' (0% Not Started, 0h 40m), and 'Deploy Database Changes' (0% Not Started, 0h 00m). A table under 'Middleware Config' lists tasks with columns for Start Time, Plan, Actual, Name, Application, Type, Role, User, and Actions.

	Start Time	Plan	Actual	Name	Application	Type	Role	User	Actions
⊘ (Not-Applicable)	0h-15m	0h-00m		Convert-Datasources to-use-Oracle-RAC syntax	None	Manual	Operations	otto_ops	-Reopen
▶	6/2/13, 12:44 AM	0h 00m	0h 01m	Configure Something	None	Manual	Operations	otto_ops	Complete Skip Fail
⌚	6/2/13, 12:44 AM	0h 03m	-	Update server.properties	None	Manual	Operations	None (Claim)	Start Skip

• 透過uRelease 功能，可以建立需求多部門配合的上版排程計劃

# uRelease 可協助計劃性上版

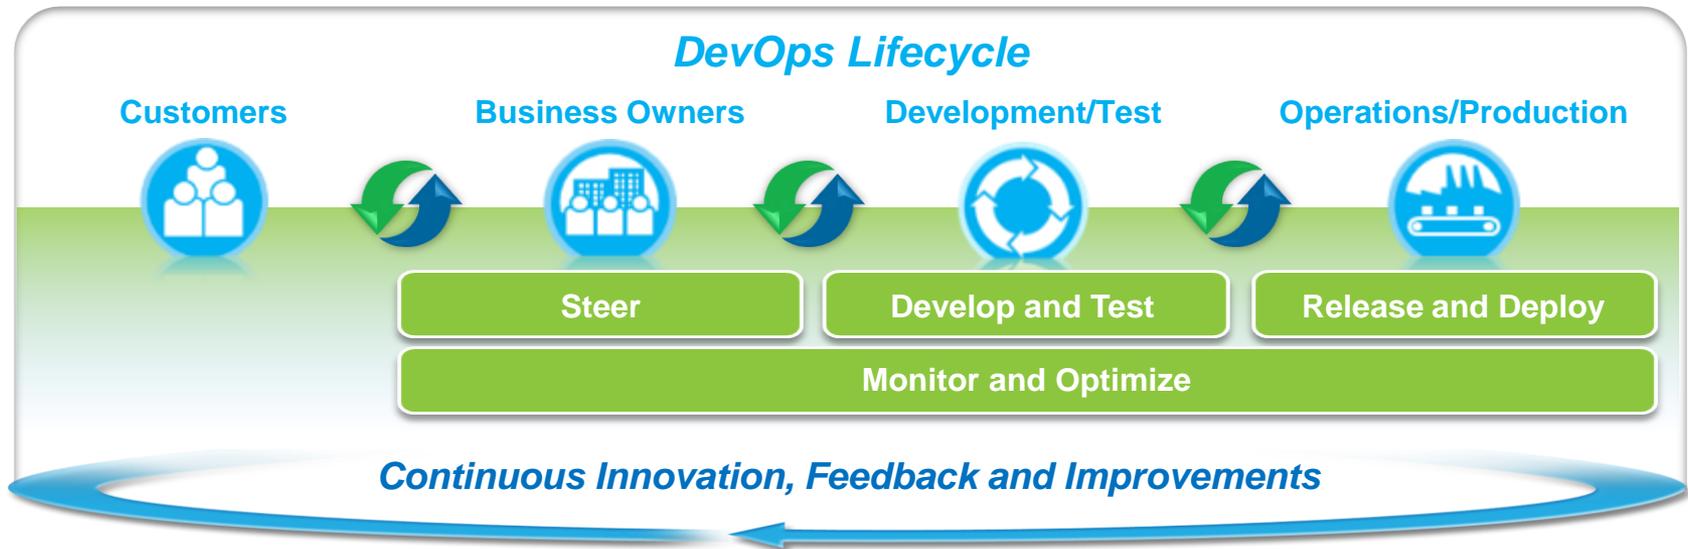

# IBM DevOps 解決方案的效益

# Recap: DevOps 能支持創新，讓維持企業領先優勢

持續軟體交付--讓客戶抓位市場機會，縮短客戶反饋時間，是企業必須具備的能力

## 加速 軟體交付

Expanding collaboration to include customers, LOB and others to eliminate organization silos

## 平衡速度成本品質與風險

Automating manual processes across delivery lifecycle to eliminate waste/delays and compliance tracking

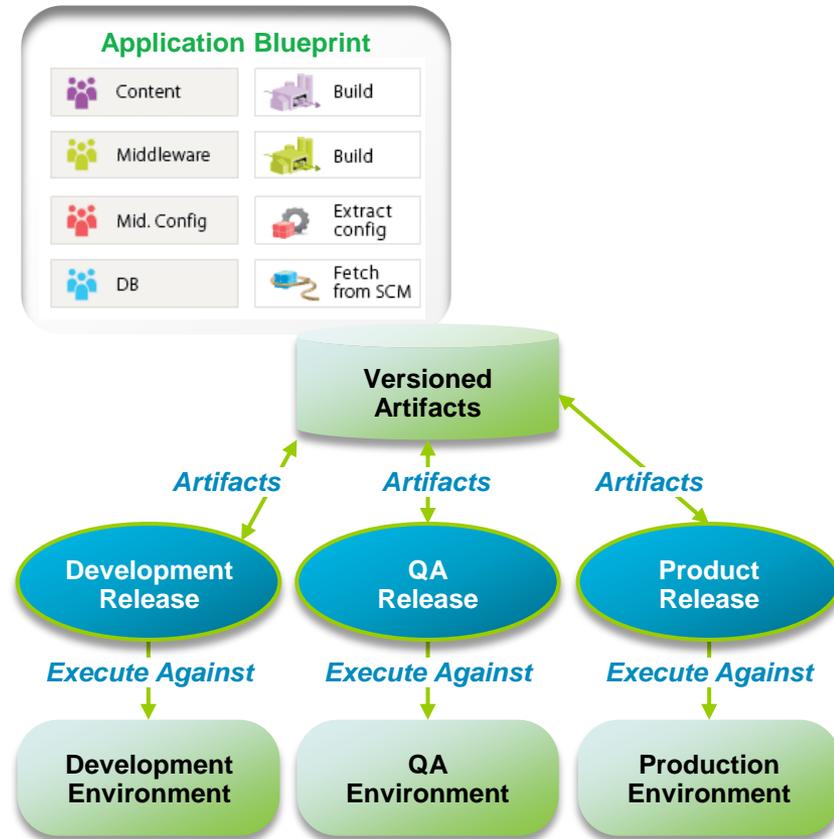

## 縮短客戶反饋的時間

Enabling a customer feedback loop for continuous improvement

# IBM DevOps平台效益

Team Concert + UrbanCode 能協助客戶:

- 減少錯誤: Automated software release and deployment
- 提升生產力: Push-button deployments for developer and operations
- 加速產品上市: Automated release and deployment with built-in best practices provides
- 遵循法規及稽核要求: Enforced Security and traceability

# Thank You
