

IBM SOA Executive Summit – July 2007

People, Process, Information for Business Centric SOA

Richard Whyte,
Executive IT Architect, IBM

7/23/07

© 2007 IBM Corporation

Session Roadmap

- Business and IT meet
- The SOA Entry Points
- Entry points are evolving
 - People and Web 2.0
 - Information Analytic Services
- Combine entry points for a value multiplier effect

Organizations depend on a flexible IT Infrastructure

Adopting a business centric approach

Business Challenges

- Globalization*
- Mergers & Acquisitions*
- Risk & Compliance*
- Eroding Customer Loyalty*
- Supply Chain Complexity*
- Industry Transformations*
- Cost Cutting...*

Business Requirements

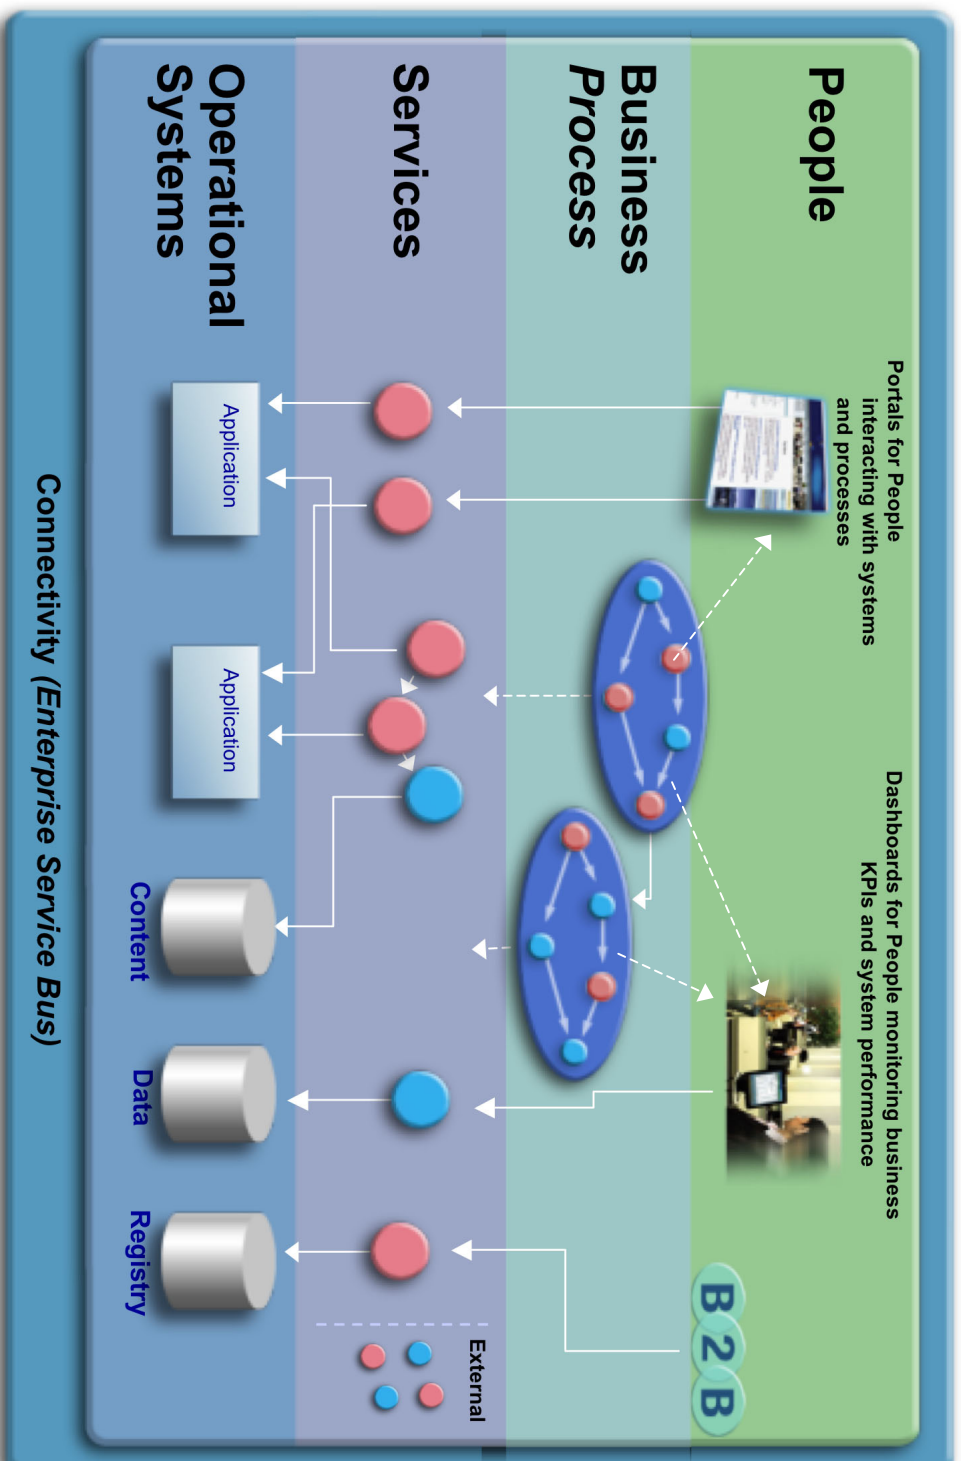

- Increase the speed of the decision making*
- Improve collaboration*
- Reduce administrative time*
- Deploy end-to-end business process*

Business Centric IT Infrastructure

- Enable Business Flexibility*
- Easy to enhance reconfigure and maintain*
- Able to be deployed in incremental steps*

Services – the building blocks for business processes

Efficiency in creation, reuse for execution...flexibility for change

Goal – Increasing people’s productivity and the overall company performance

Goal – Highly flexible and automated business processes

Goal – Reusable services accessible across the enterprise

Goal –Deliver Information as a Service

Session Roadmap

- Business and IT meet
- The SOA Entry Points
- Entry points are evolving
 - People and Web 2.0
 - Information Analytic Services
- Combine entry points for a value multiplier effect

The SOA Entry Points

 People	Greater productivity and flexibility through targeted user interactions for improved operations and collaboration
 Process	Achieve business process innovation through treating tasks as modular services
 Information	Provide trusted information in business context by treating it as a service
 Reuse	Service-enable existing assets and fill portfolio gaps with new reusable services
 Connectivity	Connect systems, users, and business channels based on open standards

The People Entry Point

Efficient, collaborative, real time decision making and execution for business agility and responsiveness

...a starting point for SOA - enabling people to interact with application and information “services” supporting business processes.

Why It's Important

People are the drivers of the business – they interact with reusable business services using the right information at the right time!

Transalta

Role-Based Emissions Dashboard

Business Challenge:

- Provide real-time KPIs of plant operations
- Monitor/regulate over capacity generation
- Ensure compliance to stringent environmental requirements (eg: emissions)

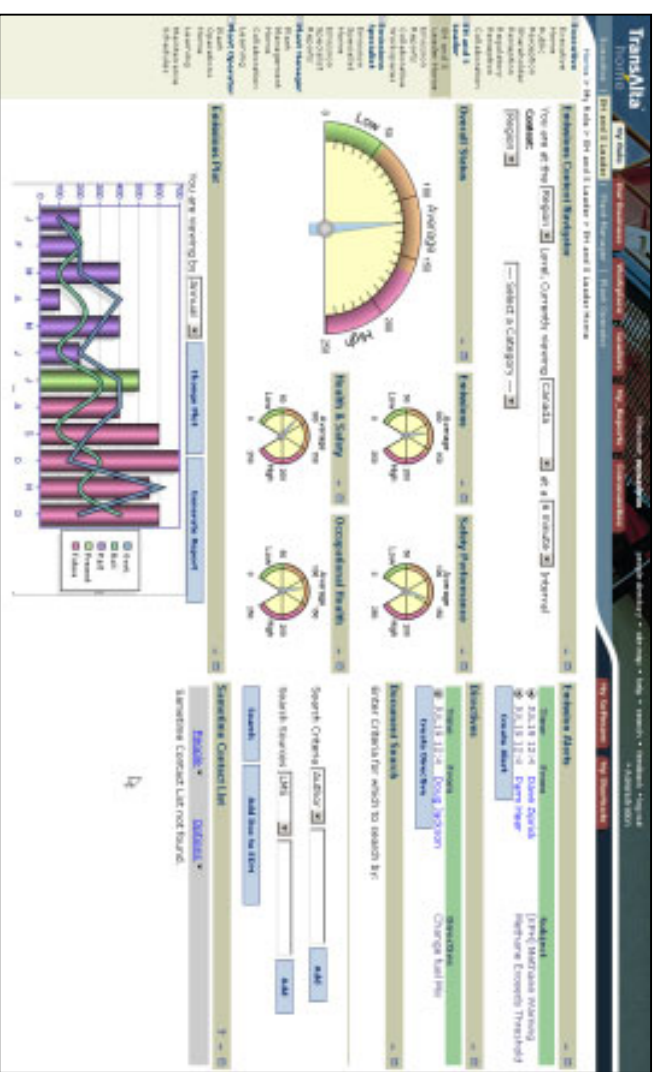

Surface data from SAP, Power, DBs

Solution:

- Real-Time Emissions Dashboard
- Role-based views

Implementation Details:

WebSphere Portal, Workplace Dashboard Framework

The Process Entry Point

Integrates and synchronizes business systems and choreographs business and system activities into reusable process components

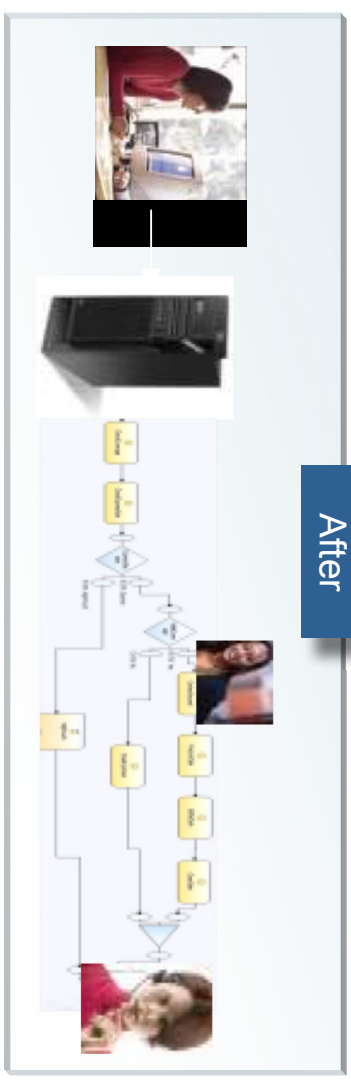

...the process of supplementing a manual process with an automatically controlled alternative through the orchestration and integration of technology and human assets to form streamlined processes.

Why It's Important

Automated processes reduce administrative time and adaptable and reusable processes to enable faster reaction to business indicators.

Respond Quickly with Automation using SOA

- **Process Automation**
 - Integrate and Synchronize Business Systems
 - Choreograph Process Activities Across the Organization
 - More responsive IT organization
 - Pre-built, reusable services reduce:
 - execution time
 - complexity/ maintenance costs
 - Higher productivity through automated process execution:

Automating the mail delivery process

Wüstenrot & Württembergische AG create a high tech pipeline

Business Challenge:

- *Needed an automated, paperless mail distribution solution to reduce mail delivery time and save money.*

▶ **Solution:** A back-end document repository, automated workflows, a mail processing application and an easy-to-use interface:

- automatically stores and distributes incoming mail
- enables back-office employees to access a list of duties and responsibilities

Results:

- Improved efficiency and customer service: mail is now processed and delivered within 2 hours
- Increased productivity: outlines tasks, priorities and makes workload balancing and management easier

Implementation Details: WebSphere Business Modeler, WebSphere Process Server, WebSphere Integration Developer, WebSphere Information Integrator Content Edition

The Information Entry Point

Delivering actionable information to people and processes

Connect, enhance and deliver in-context information across diverse operating systems, applications and legacy systems through reusable services.

Why It's Important

The Information Services enables consistent views and maintenance of data and content, providing a “single view of the truth” to people and processes

Classifying Information Services patterns

Identifying usage patterns to focus the business case

Data Complexity, & Accessibility

Deliver trusted information as a service

Multiple Versions of the Truth

Build master data services for product and customer info

Enterprise Content Management

Build services to integrate content into processes

Real time access to analytical information

Deliver analytical services for structured and unstructured data

An enterprise-wide information management strategy increases the chance of success for service oriented architecture efforts by at least 70%...
Gartner, February 2006

Co-operators Insurance

Master Data Services to maintain customer info across lines of business

Business Challenge:

Create a source for complete and accurate customer information to drive sales across lines of business and save costs

- ▶ **Solution:** Core customer information hub built on service oriented architecture for maximum flexibility, with cross-references to policy, claims and billing systems
- ▶ **Results:**
 - Can up-sell and cross-sell more effectively, growing revenues and customer loyalty
 - Efficiency due to “once and done” processing helps to avoid manual data fixes, and reduces IT maintenance support
 - Service oriented architecture provides flexibility, ease of maintenance and reduced development time
 - Enhanced customer service and business development opportunities
- ▶ **Implementation Details:** DB2, WebSphere Application Server, IBM WebSphere Business Integration Server, WebSphere Customer Center, WebSphere MQ

Session Roadmap

- Business and IT meet
- The SOA Entry Points
- Entry points are evolving
 - People and Web 2.0
 - Information Analytic Services
- Combine entry points for a value multiplier effect

Web 2.0 SOA takes the People Entry Point to the next level

Users pull SOA services

Increase brand awareness for customers and drive revenue Starwood – Sheraton.com

STARWOOD
HOTELS & RESORTS WORLDWIDE, INC.

- ▶ **Business Challenge:**
 - Communicate the brand
 - Create online community while enhancing brand loyalty
 - Enable consumers to connect with other consumers
 - Improve guest satisfaction
 - Improve conversion rates for greater revenue

- ▶ **Solution:** Use SOA-based services to add value to brand initiative and web site redesign – enabling greater community and collaboration features for web 2.0 capabilities

- ▶ **Results:** Increased guest satisfaction, Increase in page views and visitors, Increased conversions → revenue

- ▶ **Implementation Details:** WebSphere Application Server, WebSphere Process Server

Web 2.0 Goes to Work *with SOA*

Session Roadmap

- Business and IT meet
- The SOA Entry Points
 - Entry points are evolving
 - People and Web 2.0
 - Information Analytic Services
- Combine entry points for a multiplier effect

Combine Entry Points for a value multiplier

*Individual Entry Point projects deliver value on their own
..... and even greater value when combined*

Each project should create value

- Do not build for the sake of creating services
- Create services that will be used for the project

Remember that MOST projects have a People, Process and Information dimension

- Look to those dimensions for alternate solutions
- Find the most effective alternative – and one that can be reused
- Effectively mix and match services
 - eg: Information Services for federated corporate data, mashups for accessing public information services

Build incrementally

Look to reuse

Combining Portal and Process Austin Energy's Portal

- ▶ **Business Challenge:**
Serve vocal but underserved community of multi-family property owners to provide more accurate and timely access to usage, billing, and repair systems

- ▶ **Solution:** Secure, simplified web-based access to multiple, complex legacy systems.
- ▶ **Results:** Improved customer satisfaction
Reduced cost burden on AE to administer access to the legacy systems
- ▶ **Implementation Details:** Portal Extend, WebSphere Process Server, Workplace Web Content Management, Tivoli Access Manager, Rational Performance Tester

Combining Web 2.0 and SOA for effective decision making

3

Increasing the value of corporate applications

Combine Entry Points

Web 2.0

Mashups
 > increasing the consumability of the web experience

The screenshot shows a web browser window with a map on the left and a customer list on the right. The map displays a route through Newington, Portsmouth, and Rye, NH, with various landmarks and roads labeled. The customer list is titled 'Customers by Region' and includes a table with columns for Name, Address, City, State, ZIP, Phone, and Contact.

NAME	ADDRESS	CITY	STATE	ZIP	PHONE	CONTACT
Joes	1 Bow St	Portsmouth	NH	03801	373-693-7299	Kristen Barrera
Enterprises	Contemporary 86	Rye	NH	03870	963-271-2698	Cecil Rivers
Construction	Washington Road

The workshops, sessions and materials have been prepared by IBM or the session speakers and reflect their own views. They are provided for informational purposes only, and are neither intended to, nor shall have the effect of being, legal or other guidance or advice to any participant. While efforts were made to verify the completeness and accuracy of the information contained in this presentation, it is provided AS IS without

warranty of any kind, express or implied. IBM shall not be responsible for any damages arising out of the use of, or otherwise related to, this presentation or any other materials. Nothing contained in this presentation is intended to, nor shall have the effect of, creating any warranties or representations from IBM or its suppliers or licensors, or altering the terms and conditions of the applicable license agreement governing the use of IBM software.

References in this presentation to IBM products, programs, or services do not imply that they will be available in all countries in which IBM operates. Product release dates and/or capabilities referenced in this presentation may change at any time at IBM's sole discretion based on market opportunities or other factors, and are not intended to be a commitment to future product or feature availability in any way. Nothing contained in these materials is intended to, nor shall have the effect of, stating or implying that any activities undertaken by you will result in any specific sales, revenue growth or other results.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.
