IBM SOA Workshops

_DAY 68: Upgrading and changing applications. We need to find a way to make our IT infrastructure flexible to avoid downtime. The Great and Powerful Gil says he sees a solution.

Our series of complimentary one day workshops will give you practical expertise to help you deliver improved flexibility in your own business. Choose from the following:

SOA Governance workshop: How successful governance supports business change.

IBM has helped many large and small organisations successfully implement SOA, and also how to deliver re-usable services. This workshop will outline what changes need to happen, how to manage those changes, and gives you a plan of how IT and business need to align for SOA success.

IBM and Alphacourt Business Process Improvement (BPI) workshop: a practical walk through on delivering process improvement.

We'll answer all your questions on strategy, design and technology so that you see and understand the complete lifecycle of a BPI project. You'll find out how to model the new process, and analyse its impact so you get a complete picture of your progress.

SOA in Action workshop: Looking at the technology available to build an SOA infrastructure.

This hands-on session gives you a chance to experience the IBM SOA foundation solutions for yourself. Find out how integration could optimise your operation's efficiencies and costs – with no wasted capacity.
