

# Smarter Planet: Using cloud computing to deliver innovation and efficiency

Barbara Korte Global Sales Executive, Integrated Service Management

## There is a greater need for IT to help address business challenges

## Doing more with less

Reduce capital expenditures and operational expenses

## Reducing risk

Ensure the right levels of security and resiliency across all business data and processes

## Higher quality services

Improve quality of services and deliver new services that help the business grow and reduce costs

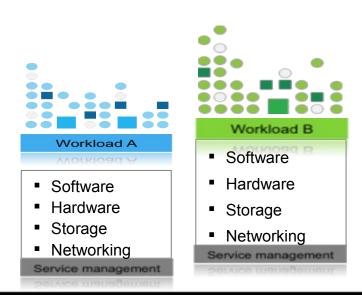

## Breakthrough agility

Increase ability to quickly deliver new services to capitalize on opportunities while containing costs and managing risk

## What is different about cloud computing?

## Without cloud computing

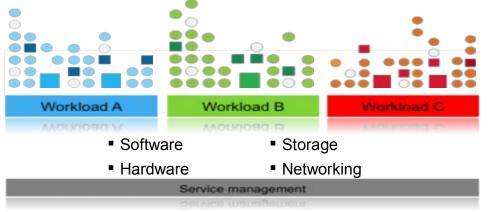

PCTY2011 57

## With cloud computing

- Virtualized resources
- Automated service management
- Standardized services

- Location independent
- Rapid scalability
- Self-service

## What clients are telling us: Universal interest cross geo and industry

Cost takeout and Faster Time to Value

• Cited by 77% and 72% respectively as top reasons for interest in cloud.

Security and Control are top concerns

69% say security is the top inhibitor to their use of public clouds

Workloads and patterns are emerging

Industries with the greatest cost pressures lead adoption

- Almost all workloads require connection to other IT services
- Collaboration and analytics meta-patterns are occurring
- Over 50% of clients in Retail, Manufacturing, Utilities, Government have cloud projects budgeted or in process

# **Open Cloud Standards Leadership**

Drive an Open Conversation	<b>Promote reuse of existing standards</b> Lead Open Cloud Manifesto with almost 400 companies Lead Open Cloud Use Case Project with 1500 world wide participants, including Chinese translation	An and appendix on your of the second
Discourage Proprietary Lock-in	Allow alternatives at the Virtualization layer Drive a common VM API interfaces for management and image definitions Build open source adapters to existing hypervisor implementations	
Build a Strong Cloud Ecosystem	Drive Application Portability that establishes an ecosystem for the development community Partner with industry leaders to define common APIs and an image format for IaaS, management, storage and beyond. Build open source adapters to existing implementations.	
Focus on Enterprise Issues	Ensure Cloud Focus on Security and Management DMTF Audit & Compliance WG, OASIS Identity Management WG Future Management Orchestration standardization in OASIS	Apache International Organization for Standardization
Engage Industry Standards	Drive adoption of IBM Architecture by Industry Standards Groups World Wide partnership especially US, China, Japan and EU. Initial focus in Financial Services, Retail, Telco, Government, & Education. Lead SLA Discussions based on Enterprise requirements & trust in IBM	Hotel Technology next generation
PCTY2011 %		Optimising the World's Infrastructure

# Integrated Service Management Addresses New Challenges with Virtualization Management & Cloud Computing

## Visibility

## Control

# Improve service quality and customer focus

- How are my services performing?
- What is the utilization of my environment? How do I ensure adequate capacity?

# Improve service through process discipline

- How do I secure my shared infrastructure & protect my data?
- How do I manage Image Sprawl?

## Automation

Accelerate tasks and create process efficiencies

- How do I rapidly provision services ?
- How do I reduce cost of service delivery?

## ...supported by a Service Management Reference Architecture

## **IBM Service Management Reference Model**

#### Assets and Infrastructure

Service = Software, Platform, Infrastructure (i.e. Composite Application, Physical / Virtual OS, Middleware, Network, Storage

PCTY2011 57

**Customer Criteria for Success as a Cloud Service Provider** 

Highly secure multi-tenancy & isolation API-driven selfservice portal Support heterogeneous infrastructures Integrated monitoring & metering High availability and integrated backup

Requirement #1: Self-Service Portal

- Requirement #2: Service Catalog
- Requirement #3: Automated Provisioning
- Requirement #4: Complex Topology Creation & Deployment
- Requirement #5: Platform/Virtualization Management
   Requirement #6: Usage Metering & Accounting
- Requirement #6: Usage metering & Accounting
   Requirement #7: Multi-tenancy: Assuring 'Service' and Tenant Isolation
- Requirement #8: Security and Privacy
- Requirement #9: Connect, manage and secure hybrid clouds
- Requirement #10: Open Standards
- Requirement #11: Migration and Quality of Service Management
- Requirement #12: Deployment Options with Heterogeneous Support

Scalability and reliability to enable customers to meet today and tomorrow's needs

# **Requirement #1: Self-Service Portal**

- Users can request the services they need, when they need them, for the time they need them
- Easily manages automated approval policies and fully extendable to complex workflows if needed
- Eliminates manual processes for requesting resources
- Based on a RESTful Web2.0 API for ease of integration with existing Portals
- Easily customizable for branding, logos & corporate colour schemes

...Improves customer satisfaction by accelerating service delivery

# **Requirement #2: Service Catalog**

- Single repository for all cloud services
- Allows end users to use IT services without being an expert in IT
- Supports faster delivery of business services
- Wizard-like importing of new service templates into the catalog
- Client-specific image segmentation
- Centralized or delegated image management

# ...Improves consistency of services

# **Requirement #3: Automated Provisioning**

- Resources can be provisioned in minutes versus weeks
- Resources are provisioned consistently every time
- Resources are quickly returned to pool when no longer needed instead of sitting idle
- Easily customizable by role

<b>I</b>	his task allows you to s	ave an image of a s	erver in order to resto	ore the server to a pre	vious state. Any pre	viously saved imag	e will be destr

# **Requirement #5: Platform/Virtualization Management**

- Understand virtual and physical resource usage
- Dynamically manage virtual workloads to optimize resource usage
- Automatically migrate virtual machines across systems to maintain service levels
- Management of VLANs to support multitenancy

# ...Increases utilization for lower capital expense with improved application availability

# **Requirement #6: Usage Metering & Accounting**

- Understand costs, track, allocate and invoice by department, user and many additional criteria
- Collect, analyze and bill based on usage and costs of shared assets
- Deliver detailed information and reports about the intricate use of shared resources

## PCTY2011

We Have Control

Our uptime is sufficient.

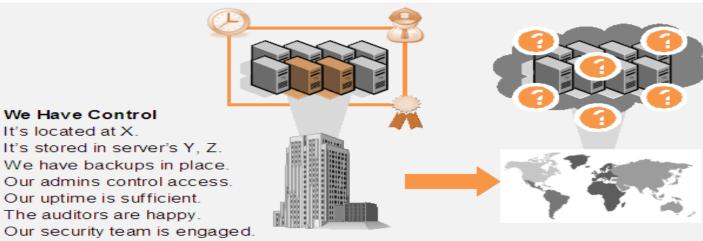

The auditors are happy.

It's located at X.

# **Requirement #8: Security and Privacy**

## Today's Datacenter

## Tomorrow's Public Cloud

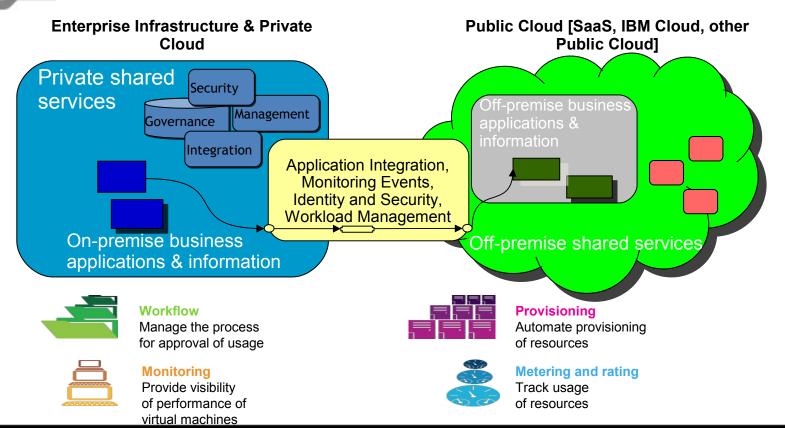

### Who Has Control?

Where is it located? Where is it stored? Who backs it up? Who has access? How resilient is it? How do auditors observe? How does our security team engage?

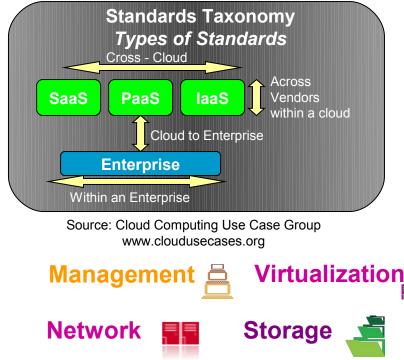

## **Requirement #9: Connect, manage and secure hybrid clouds**

PCTY2011 77

## **Requirement #10: Open Standards**

Standards address inhibitors to cloud adoption including security, vendor lock-in and portability.

Recognize that cloud standards are emerging throughout the market, within IT and other industries.

Standards should be open, have long term stewardship, have code to back them, and be widely adopted.

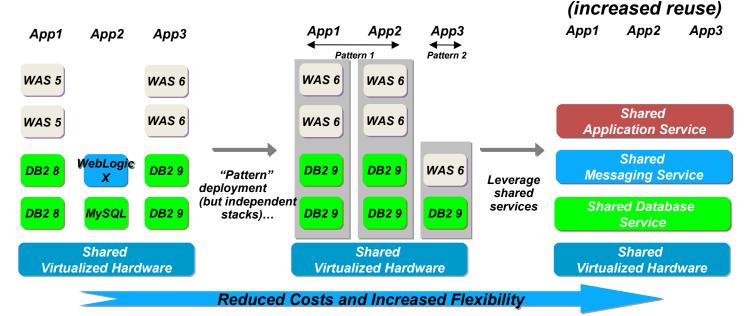

## **Requirement #11: Migration and Quality of Service Management**

Virtualized Traditional

Standardized Images and Patterned Deployment

Shared, virtualized hardware results in Capex savings; shared middleware services results in Opex savings

Shared Middleware

Platform Services

## **Requirement #12: Deployment Options with Heterogeneous Support**

Three approaches to give our customers consumability options and multiple entry points for a common cloud computing platform

## A la Carte Service Mgmt

- Customizable
- Individual software offerings, fully customizable to the environment
- Could begin with TSAM, or could require other SM capabilities for cloud, such as security or storage mgmt.
- Designed for customized datacenter automation. Currently utilized by external customers, service providers, and internal customers such as IBM public clouds.

## IBM Service Delivery Mgr

- Flexible HW Configurations w/Fast Time to Value
- Integrated software-only service management offering for cloud computing.
- Same basic SW function as CloudBurst
- Delivered as a set of virtual machines for simplified deployment and faster time to value
- Allows flexibility of the HW platform, with a pre-determined set of service management tasks and workflows

## IBM CloudBurst

- Fixed Configurations, Faster Time to Value
- Pre-Integrated HW/SW/Services release in a pre-determined configurations
- Includes HW for System x, or PowerSystems, STG SW and Tivoli Service Management Software, GTS quickstart services
- Self-contained management designed for cloud computing pilots or fixed size environments
- Designed for quick deployment of limited cloud use cases

**Rapid Time to Value** 

Customizable

## **Business Background**

- ING is a large world-wide operating financial institution offering clients banking, insurance and asset-management services (HQ in Amsterdam, Netherlands), ~110,000 employees
- ING needs to drive down IT costs dramatically and intensively improve their time to deliver new IT environments to the business
  - ING is in the process of transforming towards a "new world" IT landscape (besides their legacy "old world" IT), in which they can benefit from the advantage of a private cloud concept

## **Solution Overview**

- Automated delivery of standardized "stacks" (OS up to app, single VM) and "solutions" (distributed environment, multiple stacks), for development, test, acceptance and production purposes
- Tivoli Service Automation Manager-based private cloud implementation, management across System p and x86 (VMware vSphere), additional platforms will be added
- Restructuring of existing IT delivery / mgmt processes & IT landscape to enable large efficiency gain. New processes implemented in TSAM mgmt plans
- Integrates with ING-internal mgmt systems where needed and appropriate (e.g. ING Corporate Directory Server & Identity Mgmt System, agents to integrate with backup & monitoring get deployed & configured automatically)

## Cloud Business Benefit

- Large efficiency improvement in time and cost to deliver new IT environments
- Massively improved predictability (regarding time to deliver new environments and future availability of required IT capacity, enabled by reservation)
- · Visibility into where resources are allocated to
- Improved customer experience (i.e. quality of service) through standardisation and increased agility.
- Transparent cross-charging ability for provided IT services
