IBM®

IMS Technology Update - Addressing On Demand Business Requirements

Attend one of our free technical seminars to learn about the latest advancements to IMS technology.

If your enterprise is like most, you've invested years in IMS™ data, applications and skills. Staying up-to-date has brought valuable rewards, such as enabling you to take full advantage of other new technologies. This seminar will show you how to preserve this investment and continue leveraging it to meet current and future requirements of the On Demand environment.
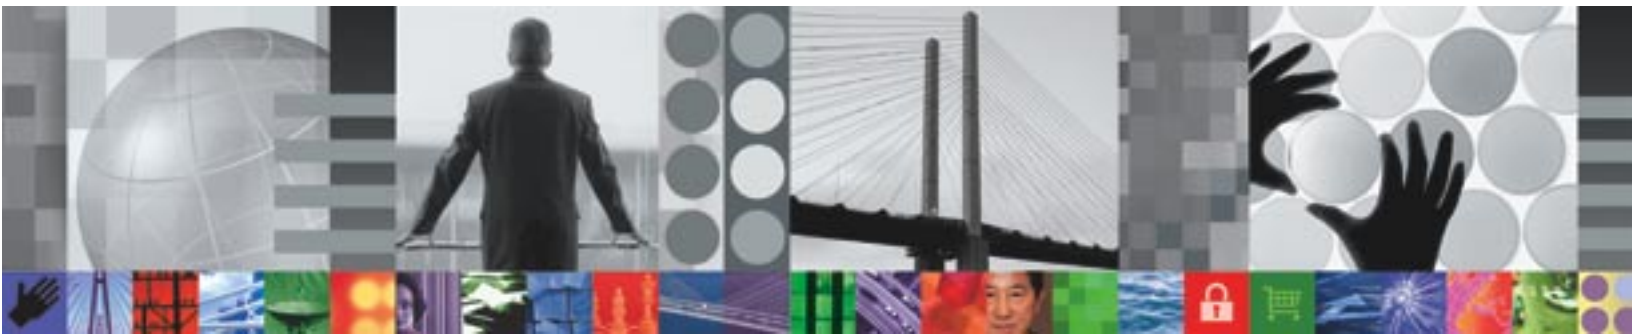

You'll have the unique opportunity to interact with technical professionals who have extensive implementation experience with the newest IMS versions – including IMS V9 and V10 – and IMS tools. You'll learn about new enhancements that help improve the productivity and effectiveness of valuable database administrators and systems programmers, as well as how to meet increasing business requirements to share and aggregate information.

In this one-day IMS technology update, **Addressing On Demand Business Requirements**, you'll learn how to:

* *Maximize business agility and performance by streamlining routine tasks and automating key functions*
* *Facilitate the recovery process while maximizing data availability*
* *Use autonomic enhancements to better manage increasingly complex environments*
* *Ensure continuous, high-performance operations for applications and data*

Register online today!

This technical seminar will help you better understand IBM's newest IMS offerings, and leverage your infrastructure investments to support an On Demand operating environment. Visit **ibm.com**/software/zseries/imsseminars right now to locate the seminar nearest you.
