

FIPER Application in Bombardier One Year Later

Tim Ambridge,
Bombardier Aerospace

Mike Sheh
Engineous Software Inc.

Agenda

- **March 2006**
- **FIPER Implementation a year later**
 - September 2006 (Yohohama, JAPAN)
 - March 2007 (Orlando)
- **Other materials**
 - Pratt & Whitney
 - Airbus/RollsRoyce

The Role of CAE in an Extended Aerospace Enterprise

*Tim Ambridge
Director, PLM Business Processes,
Bombardier Aerospace
IBM CAE Conference, March 2006*

BOMBARDIER

Bombardier Aircraft

Bombardier*
CRJ700*

Bombardier*
Q400*

Six Models of Regional Aircraft

- Over 2,000 in Service
- Canadair Regional Jet* Series
- Dash 8*/Q* Series Turboprops

Nine Models of Business Aircraft

Bombardier*
Global Express*
Global 5000*
Global XRS

Bombardier*
Challenger* 300

Bombardier*
Challenger* 604

Bombardier*
Learjet 40*
Learjet 45*/45XR*
Learjet 60*

BOMBARDIER

* Trademark(s) of Bombardier Inc. or its subsidiaries.

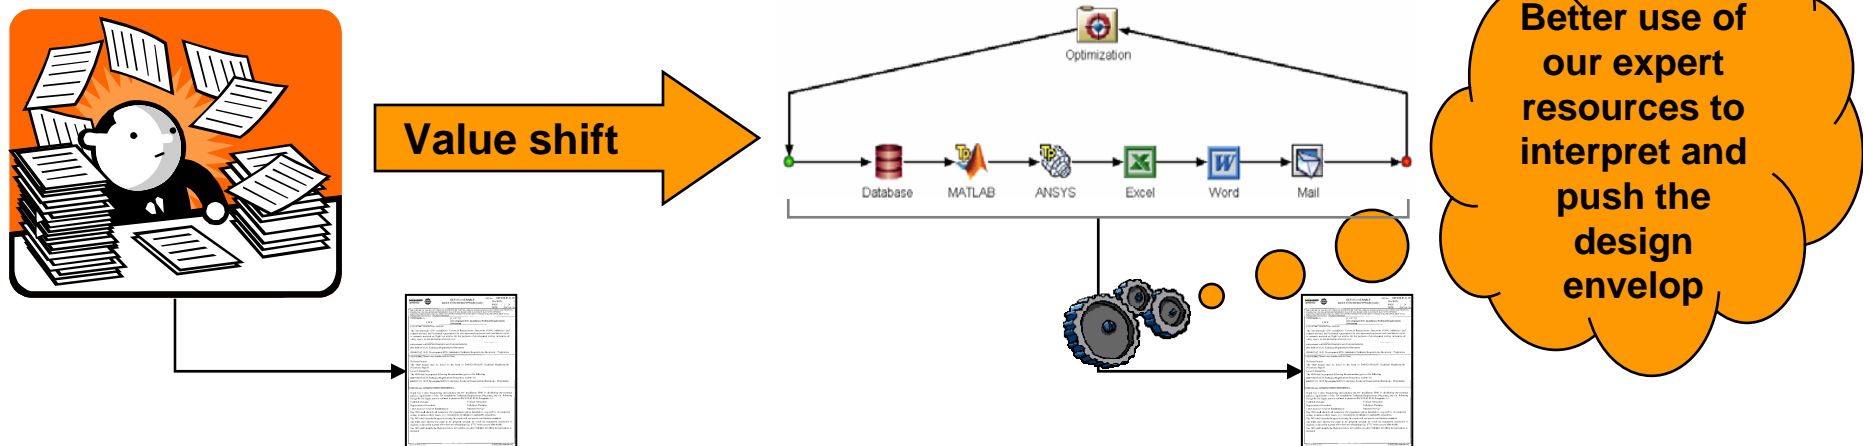

Industry Challenges: The need for collaboration

- **High Cost/Low Volume**
 - Multi-billion dollar 3 – 5 year development programs
 - Multi-million dollar products with only 300 – 400 units delivered per year
- Large amount of customization and change – even after delivery
- Highly regulated environment – including after sales service
- Aircraft are high maintenance and long life items
- **No Aerospace company alone has all the resources required to cover the cost nor the range of expertise needed to bring a new aircraft to market and provide support**
- **OEMs have become integrators, suppliers are now Partners in sharing financial and technical risks**

→ We needed to re-engineer the way we do engineering

World Class Engineering – Shifting our Focus

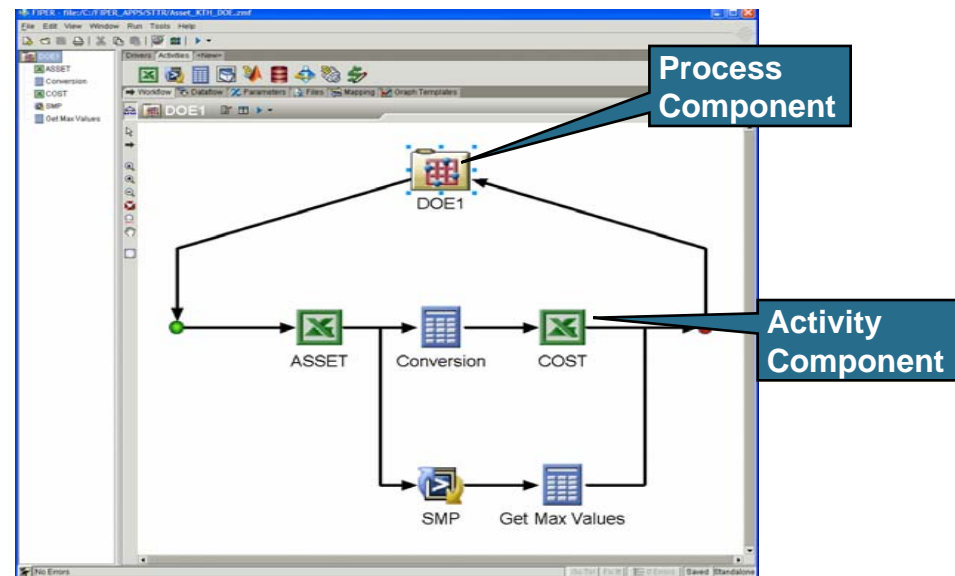

Shifting our focus from producing analysis reports to developing innovative products

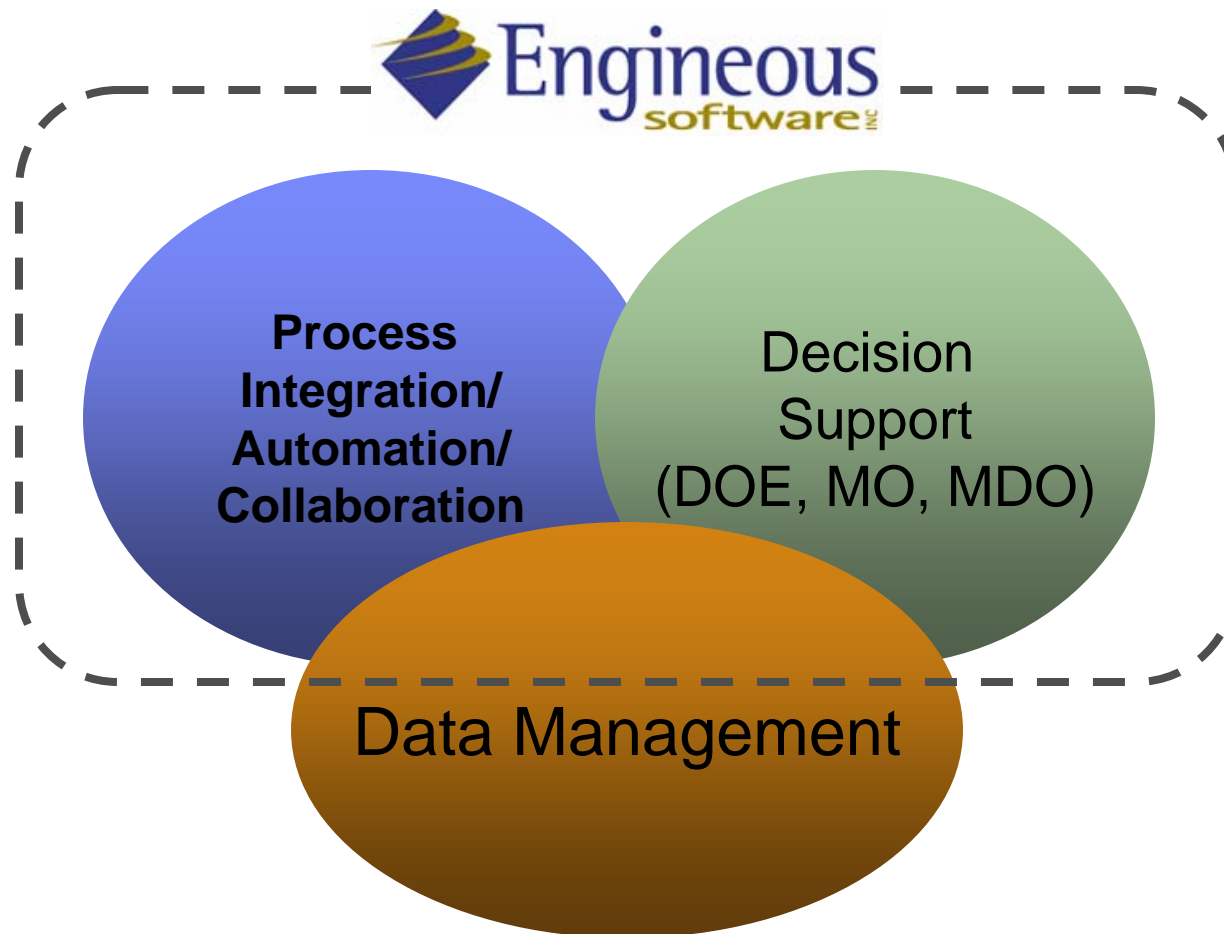

“It wasn’t easy but I finally found the analysis tool used to substantiate this part. But then I wasn’t sure it was really the version used for the official certification report. I recall they had to do a last minute change to the analysis approach before signing off the report. Getting the tool is one thing, but reusing it is another, especially since Mr. X is no longer here.”

Why **FIPER** Engineering Process Infrastructure ?

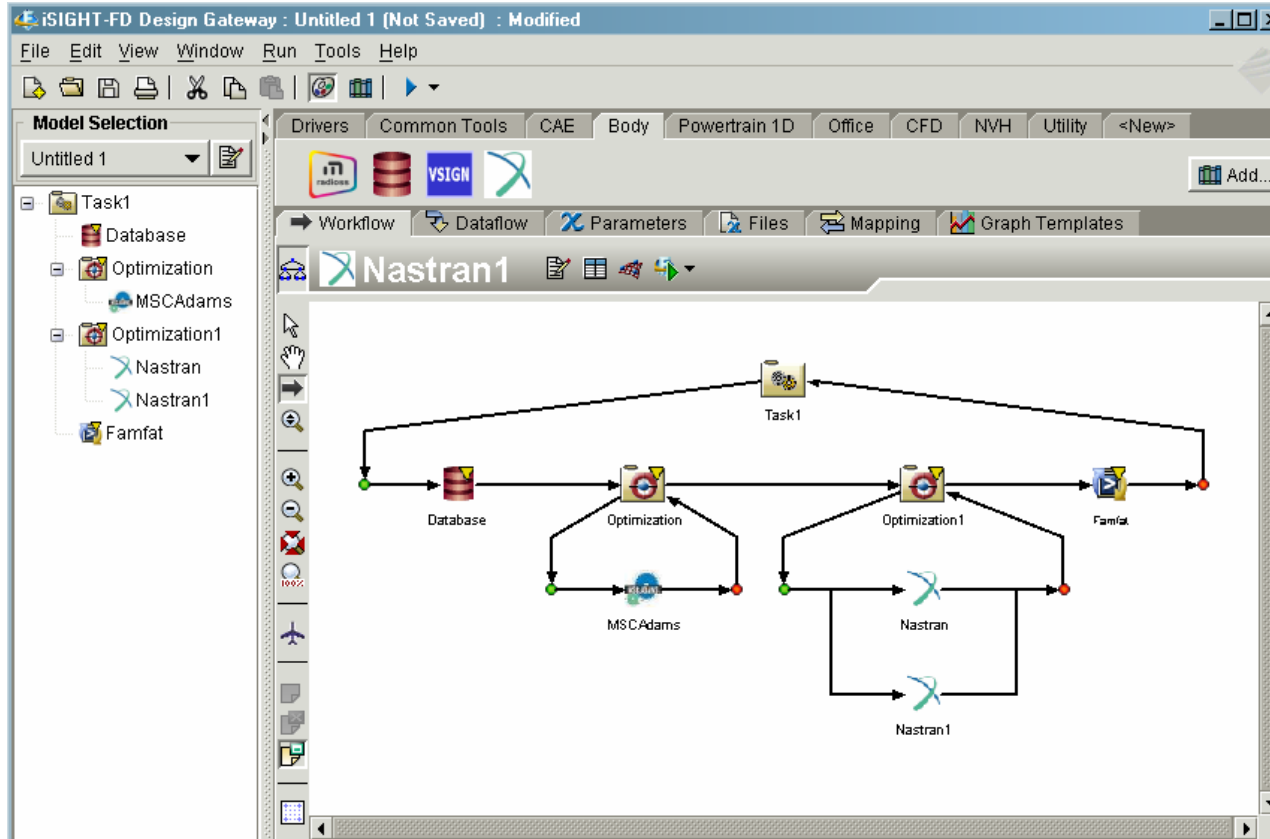

- Drag-and-drop for building process models
- Links any application (CAD, Excel, Word, MatLab, ...)
- Controls process versions and keeps trace of data generated
- Built-in design driver components (DOE, Optimize, Monte Carlo, cost, ...)
- Integration with PLM, CAD, Document Mgt System, etc
- Web-based, secure, collaborative environment, inter- or intra-enterprise

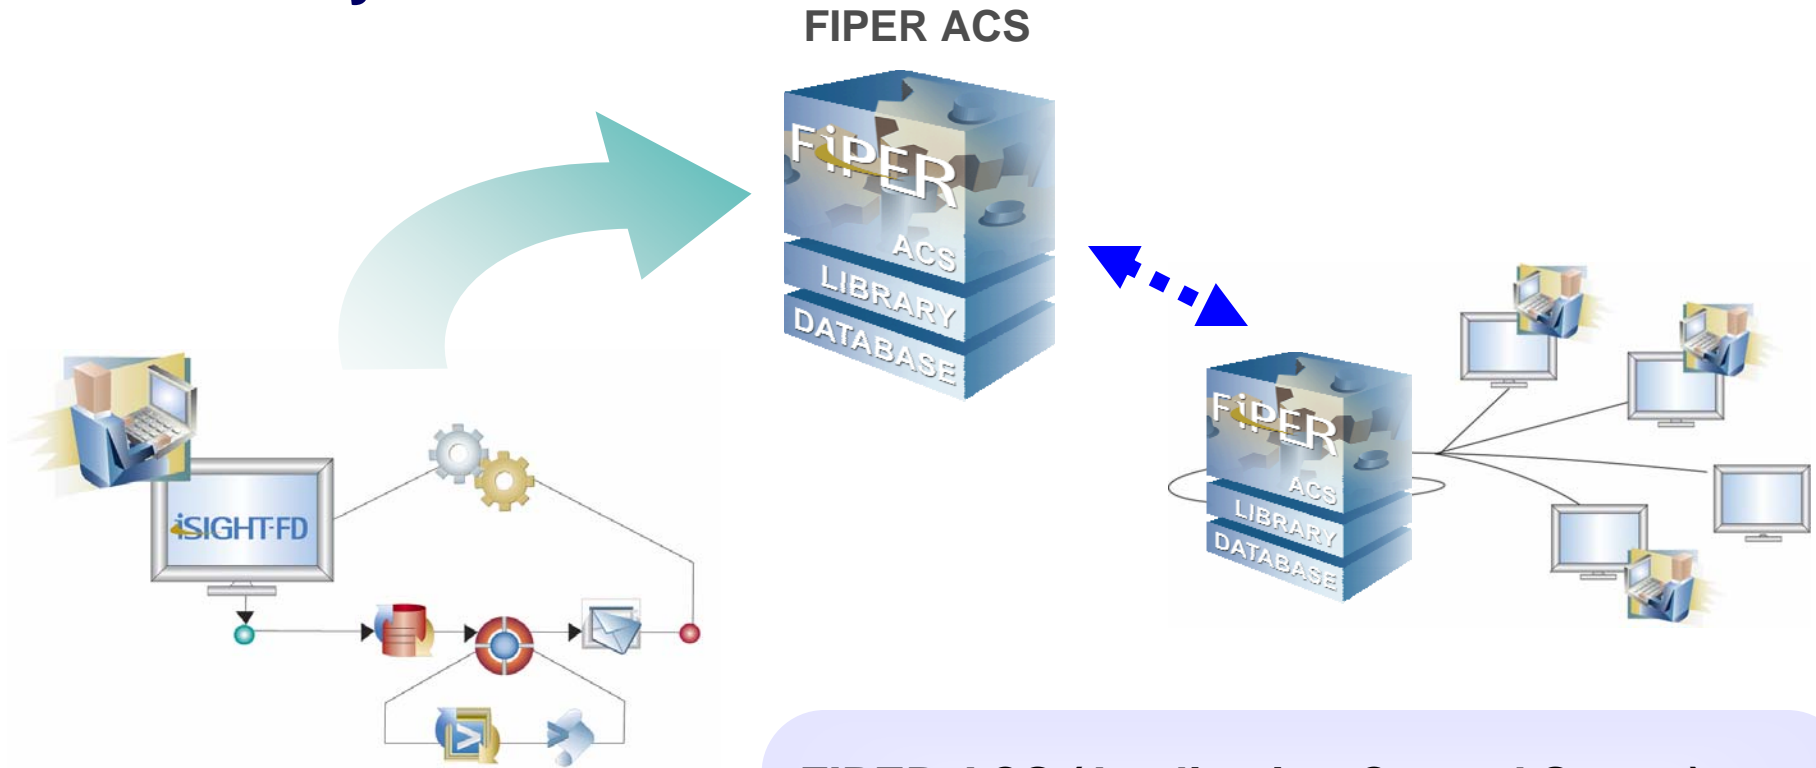

Engineous' Value Proposition:

iSIGHT-FD Desktop Process Capturing

FIPER System

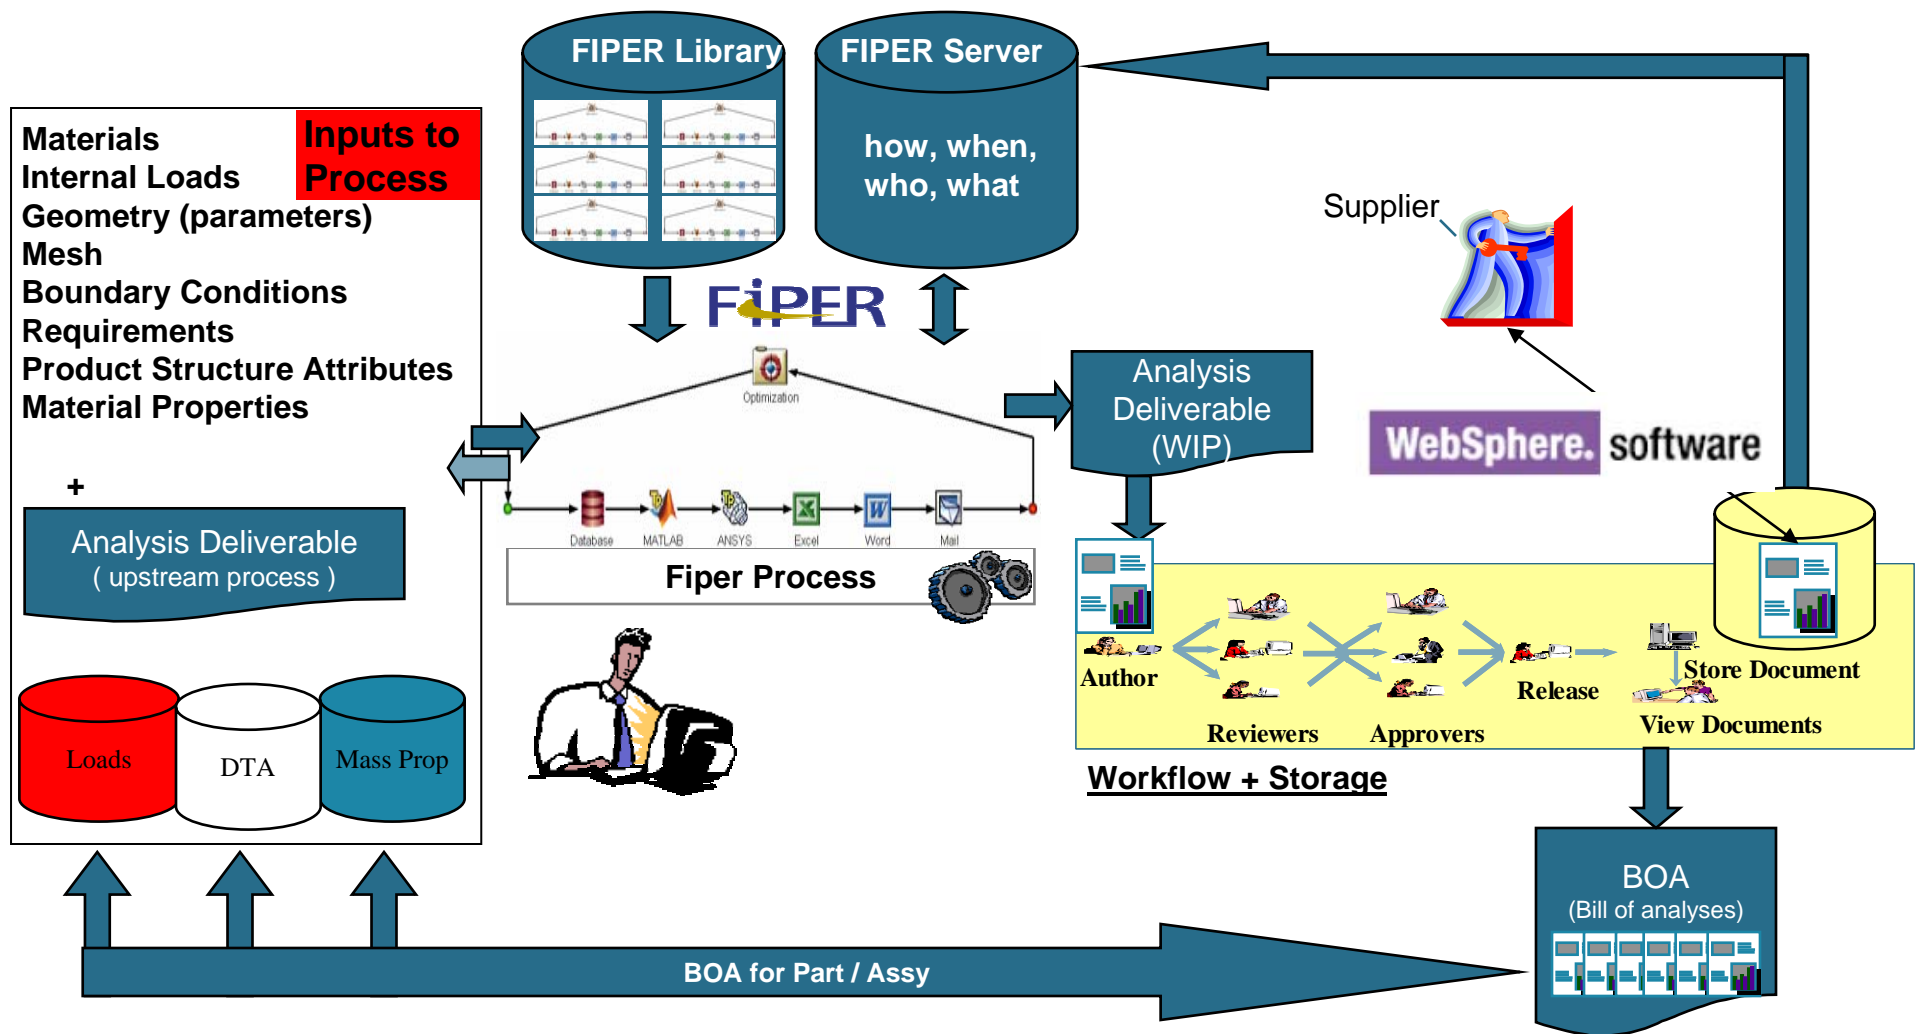

iSIGHT™-FD

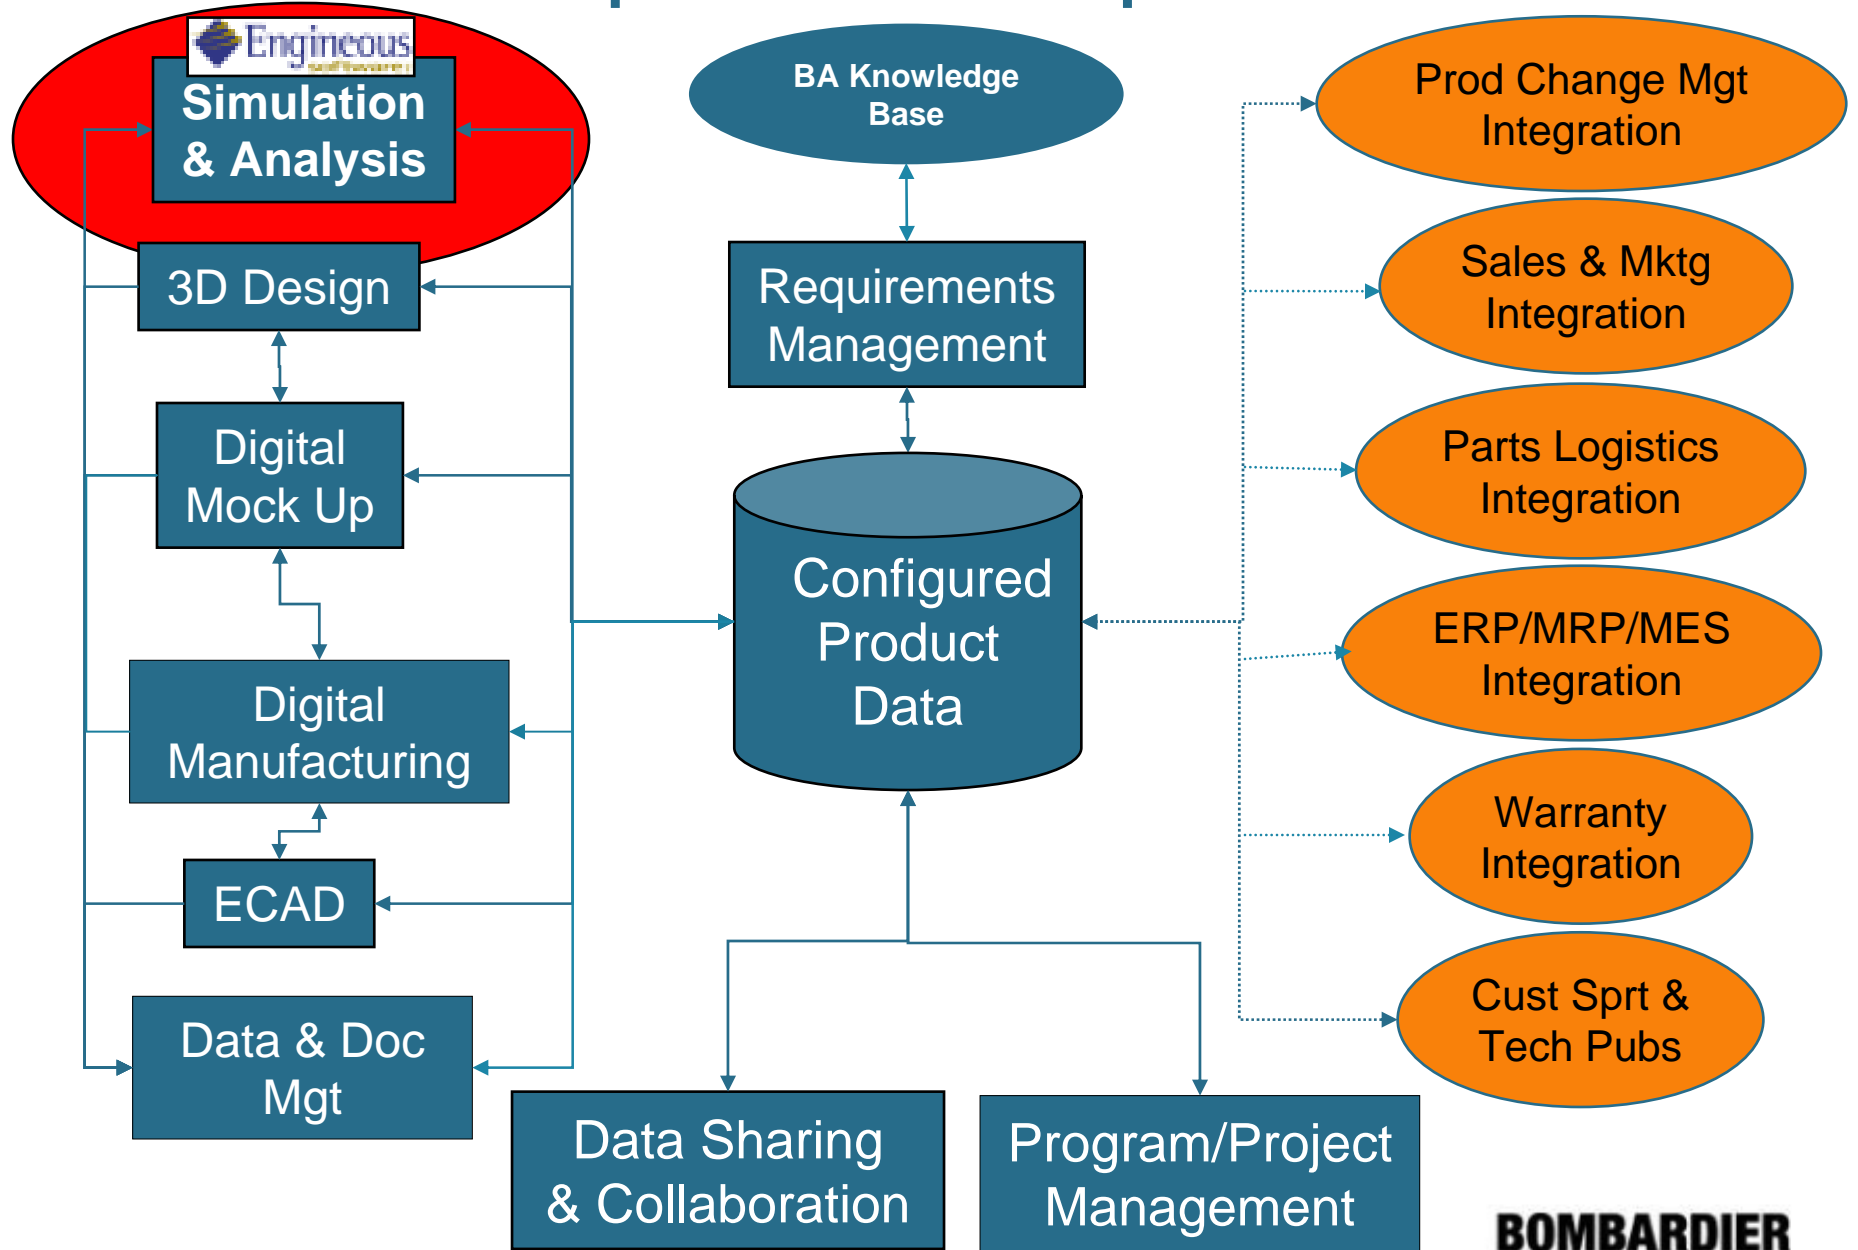

FIPER ACS (Application Control Server)

- ◆ Library/DB - Share Workflows and Components
- ◆ Heterogeneous Computing – Parallel/Distributed
- ◆ Collaboration – In-house & B-2-B
- ◆ Web Services – mail, browser webtop

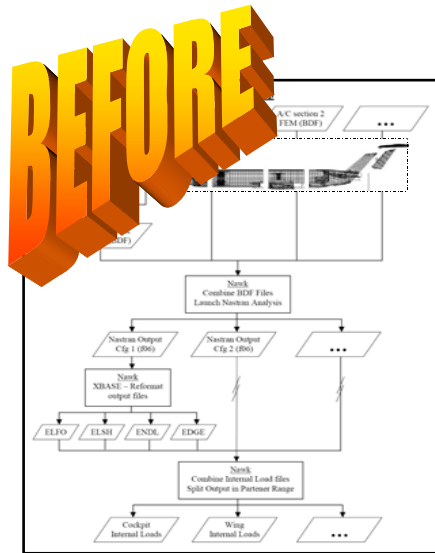

FIPER Processes in the PLM Landscape

Bombardier Aerospace PLM Conceptual Architecture

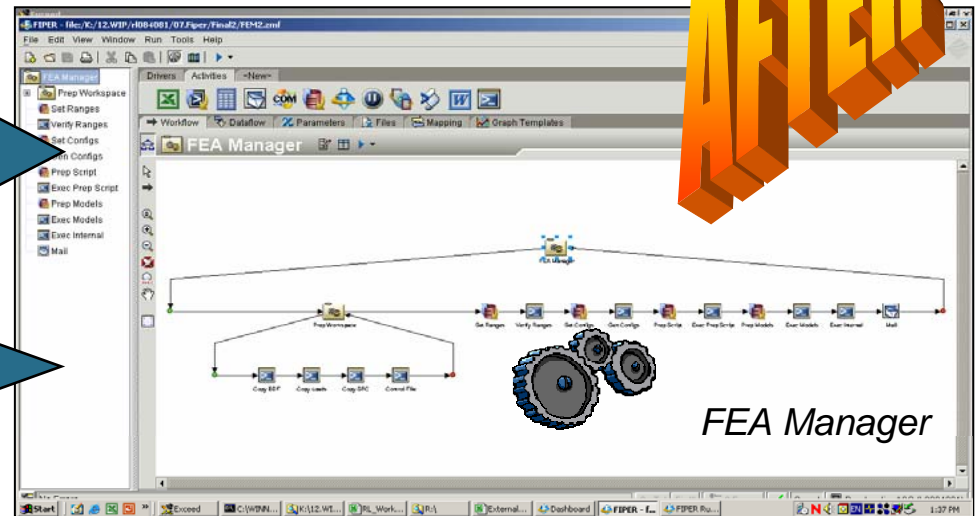

Stress Department Achievement: Process for generating internal loads

7 days cycle time
reduction for each
of the load cycles

60% reduction in
cycle time

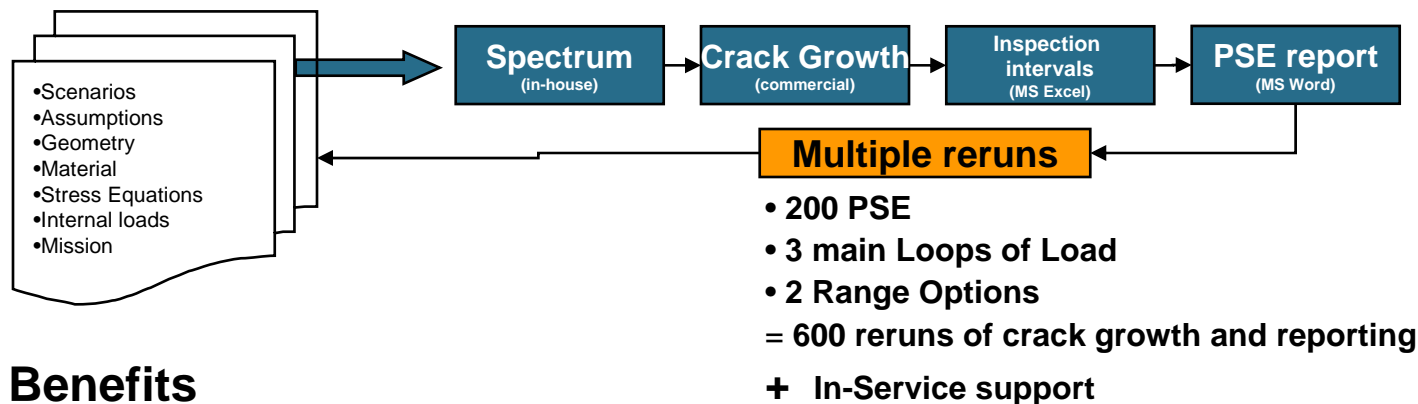

Intangible gains

- Allows Multiple Optimization Loops with Suppliers
 - Weight & product Optimization
 - Ability to review impact to loads change very quickly
- Facilitates management of multiple models, load sets and work packages
- More robust process → Eliminates manual tasks
- Automated quality checking

Stress Department Achievement: Damage Tolerance Analysis

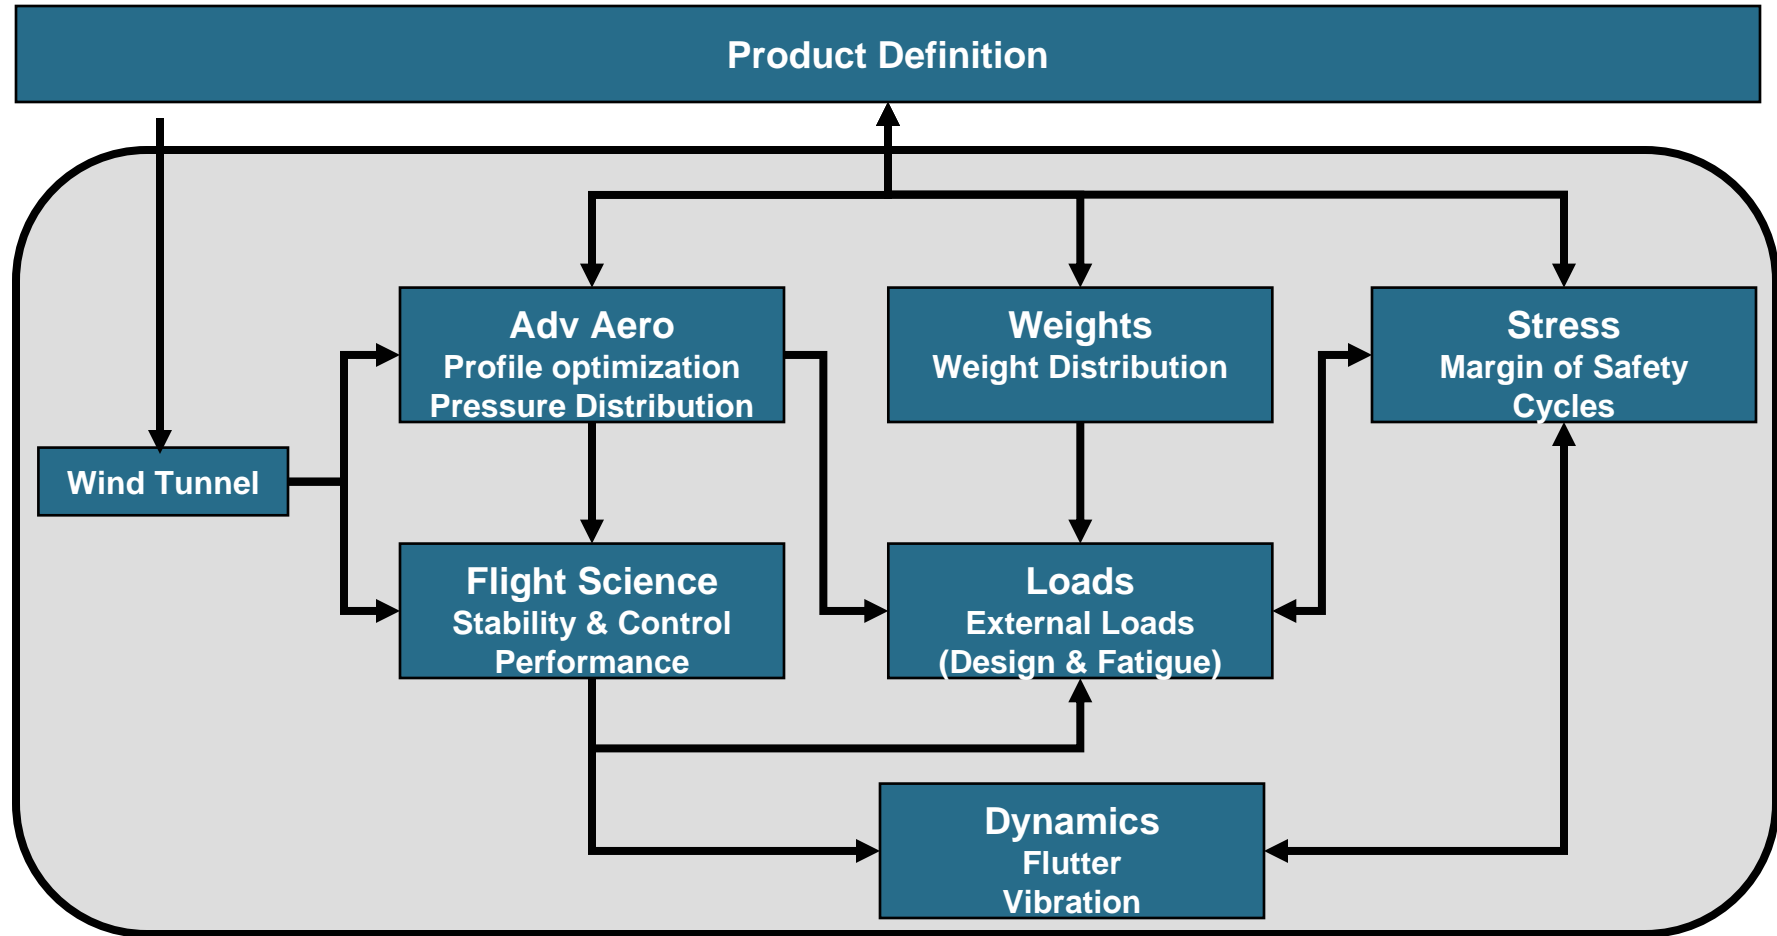

- Same analysis process applies to each Principle Structural Elements (PSE)

- Benefits**

- **75% cycle time** reduction in running damage tolerance analyses (DTA)
- Quick turnaround for disposition to discrepancies
- Ability to review impact to loads change very quickly
- Eliminates manual tasks in analyses → More robust process
- Standardization of processes

Where we are going

Multi-Function sequence integrated in a unified simulation & analysis environment

FIPER Implementation, A Year Later

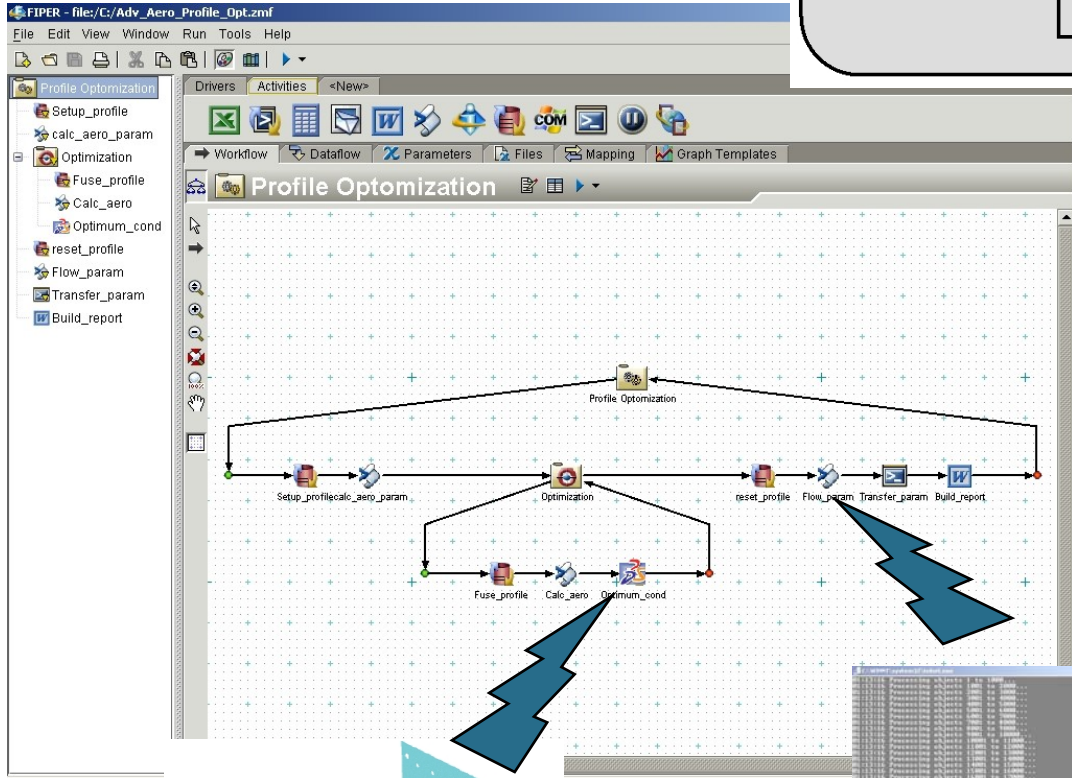

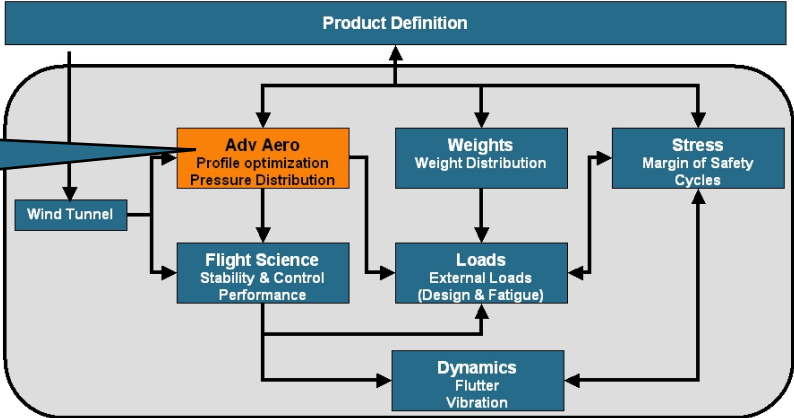

The Role of CAE in an Extended Aerospace Enterprise

*Tim Ambridge
Director, PLM Business Processes,
Bombardier Aerospace

Creating an Innovation Culture

Tim Ambridge
Director, PLM Business Processes, Bombardier Aerospace

2007-March-14

BOMBARDIER

Ten easy steps to introducing change!

Step 1: Start with Change in Mind

- **Build in change management from the beginning**
 - Make change management an integral part of the project plan
 - Get the sponsors involved right away
 - Be clear about the deliverables
 - Know which change methods you are going to use with each audience from the start
 - Be clear about the timeline
 - Build up to implementation, don't wait for deployment to get started

A Final word: “The Evolution of Species”

- The technical stuff is the easy stuff, the real work is in getting people to use it, under pressure people revert to the familiar
- Continuous improvement requires continuous change
- People are the only source of long-term competitive advantage
- Companies can longer promise employees life time employment, but companies can provide marketable skills

“It is not the strongest, the fastest or the smartest of the species that survive, it is those most adaptable to change”

- Charles Darwin

Lessons learned

- Integration within PLM architecture shouldn't be underestimated
- Integration with legacy applications shouldn't be underestimated
- Use as much “out of the box” as you can, customize as a last resort
- Don't try to automate your “As-Is”; rethink the process
- People are ultimately more adaptable than software
- Standardize across industry: “Is everybody really different ?”
- Exchange data rather than documents
- Supplier Compatibility : “Will they change with us?”
- Never, ever underestimate the difficulty in getting people to change, under stress, people revert to what they know
- Continuous improvement requires continuous change, try to implement a culture that wants change

Why we are changing is more important than what is changing

Pratt & Whitney iSIGHT/FIPER Experience

Engineous 2007 Conference

J. Brent Staubach
Pratt & Whitney
Manager & Chief of Systems Optimization
March 13, 2007

Pratt & Whitney Is A Division Of United Technologies Corporation

40,000 employees

\$ 11.1 billion sales

30,000 engines world wide on 600 airlines & 70 airforces

Headquarters in East Hartford Connecticut

Makers Of World Class Aerospace Propulsion Systems

ESI Product History At Pratt & Whitney

- Initial pilot project with *Engineous started* in 1995, V1.2
- 1996 PW purchased 20 seats, v2.0
- 2001 UTC corporate agreement
90 seats + 1000 parallel seats, v6.0
- 2004 UTC site license
- 2005 initial FIPER Purchase

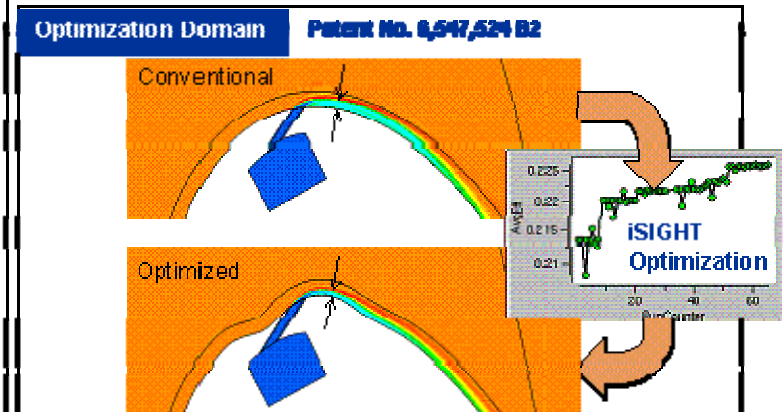

Local Optimization : Turbine Airfoil Film Cooling

Atul Kohli, ASME Turbo Expo 2006

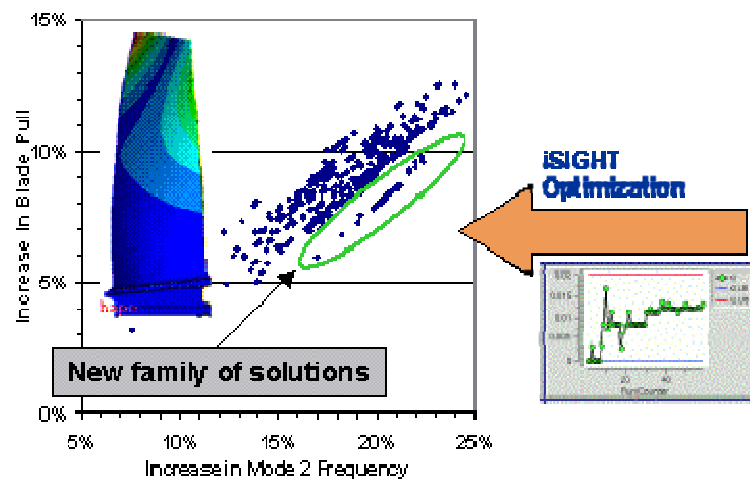

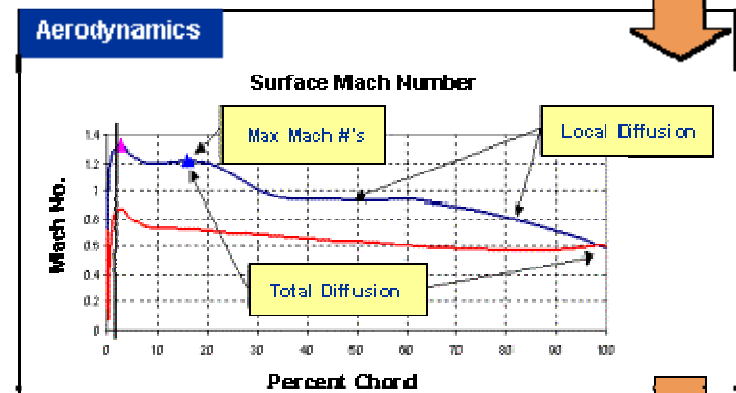

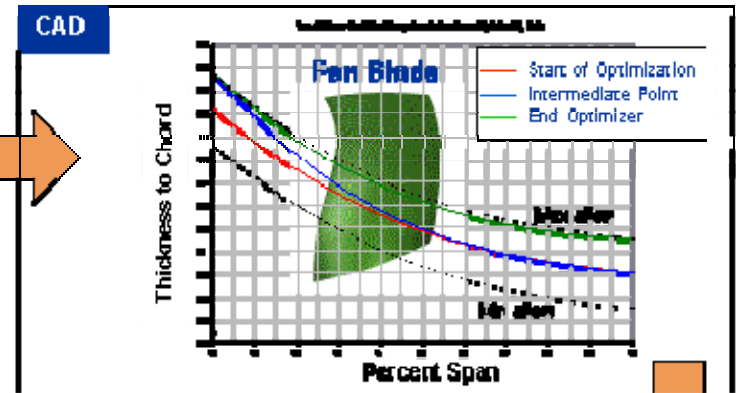

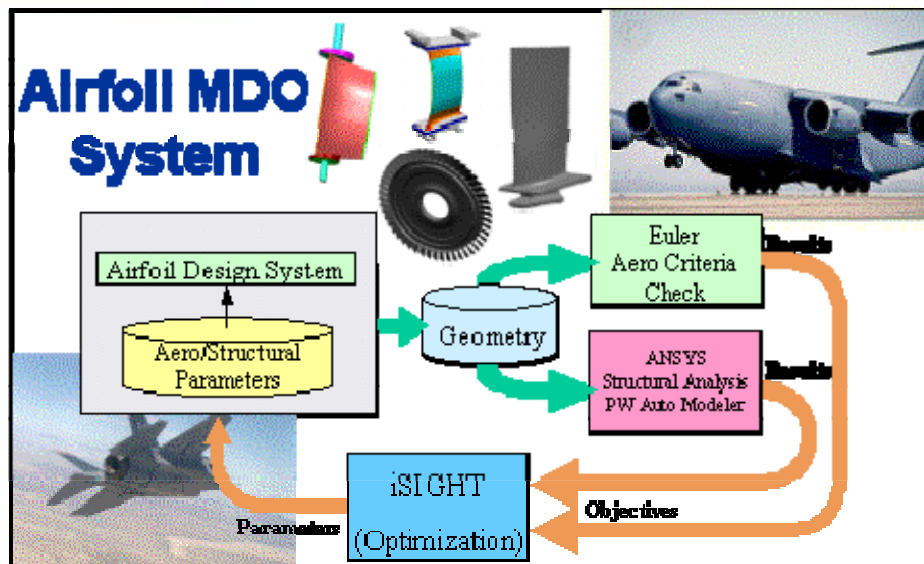

J. Brent Staubach

Part Systems Optimization : Airfoil MDO

Michael Gottschalk, Propulsion Safety, Affordability, and Readiness Conference, 2006

3% Higher Frequency @ Constant Airfoil pull

Eliminated need For hub-disk Redesign

+\$10m Savings

J. Brent Staubach

Module Systems Optimization: Turbine MDO

J. Brent Staubach, Engineous User Conference, 2003

10% Lighter Disks
1% Efficiency Improvement
Applied to all designs since 2003
Value to product \$30m

Dassault Aviation	Leuven Measure. and Syst.		Politecnico di Milano
Eurocopter	MSC Software		Politecnico di Torino
Hydro-Control	Samtech		Queen's University, Belfast
Ind. de Turbopropulsores	Xerox		Stuttgart University
Messier-Dow ty			Tech. Univ. of Hamburg
MTU Aero Engines			UNINOVA. Lisbon
Operator			Warw ick University
Rolls-Royce			
Snecma Moteurs			
Techspace Aero			
Thales Avionics			
Thales Avionics ES			
Turbomeca			
Volvo Aero Corporation			

Plus 3rd tier Suppliers: INBIS, ESOCE, Etc.

The key VIVACE objectives

Achieve a 5% cost reduction in aircraft development

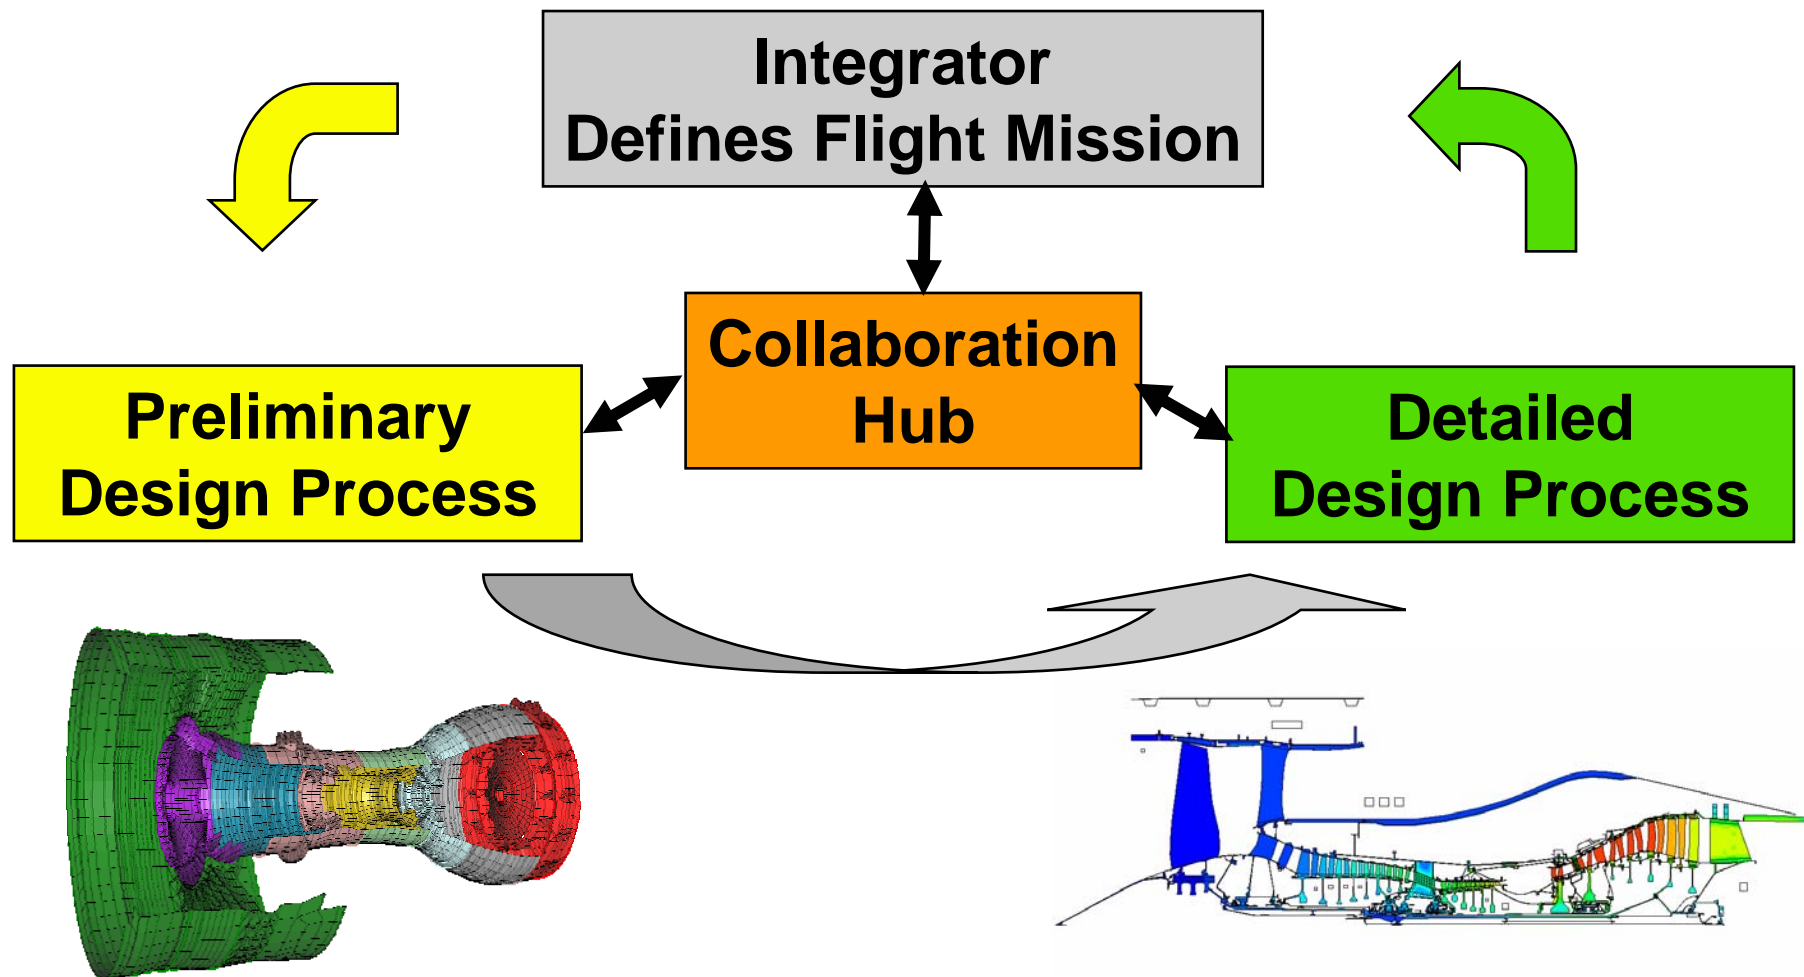

Contribution to 30 % lead time reduction in engine development

Contribution to 50 % cost reduction in engine development

VIVACE Story

Distributed engine design process

Design Groups and VEC-Hub (Oct 2006)

Processes are running at different locations

Shared Respository - SAs
EUROSTEP

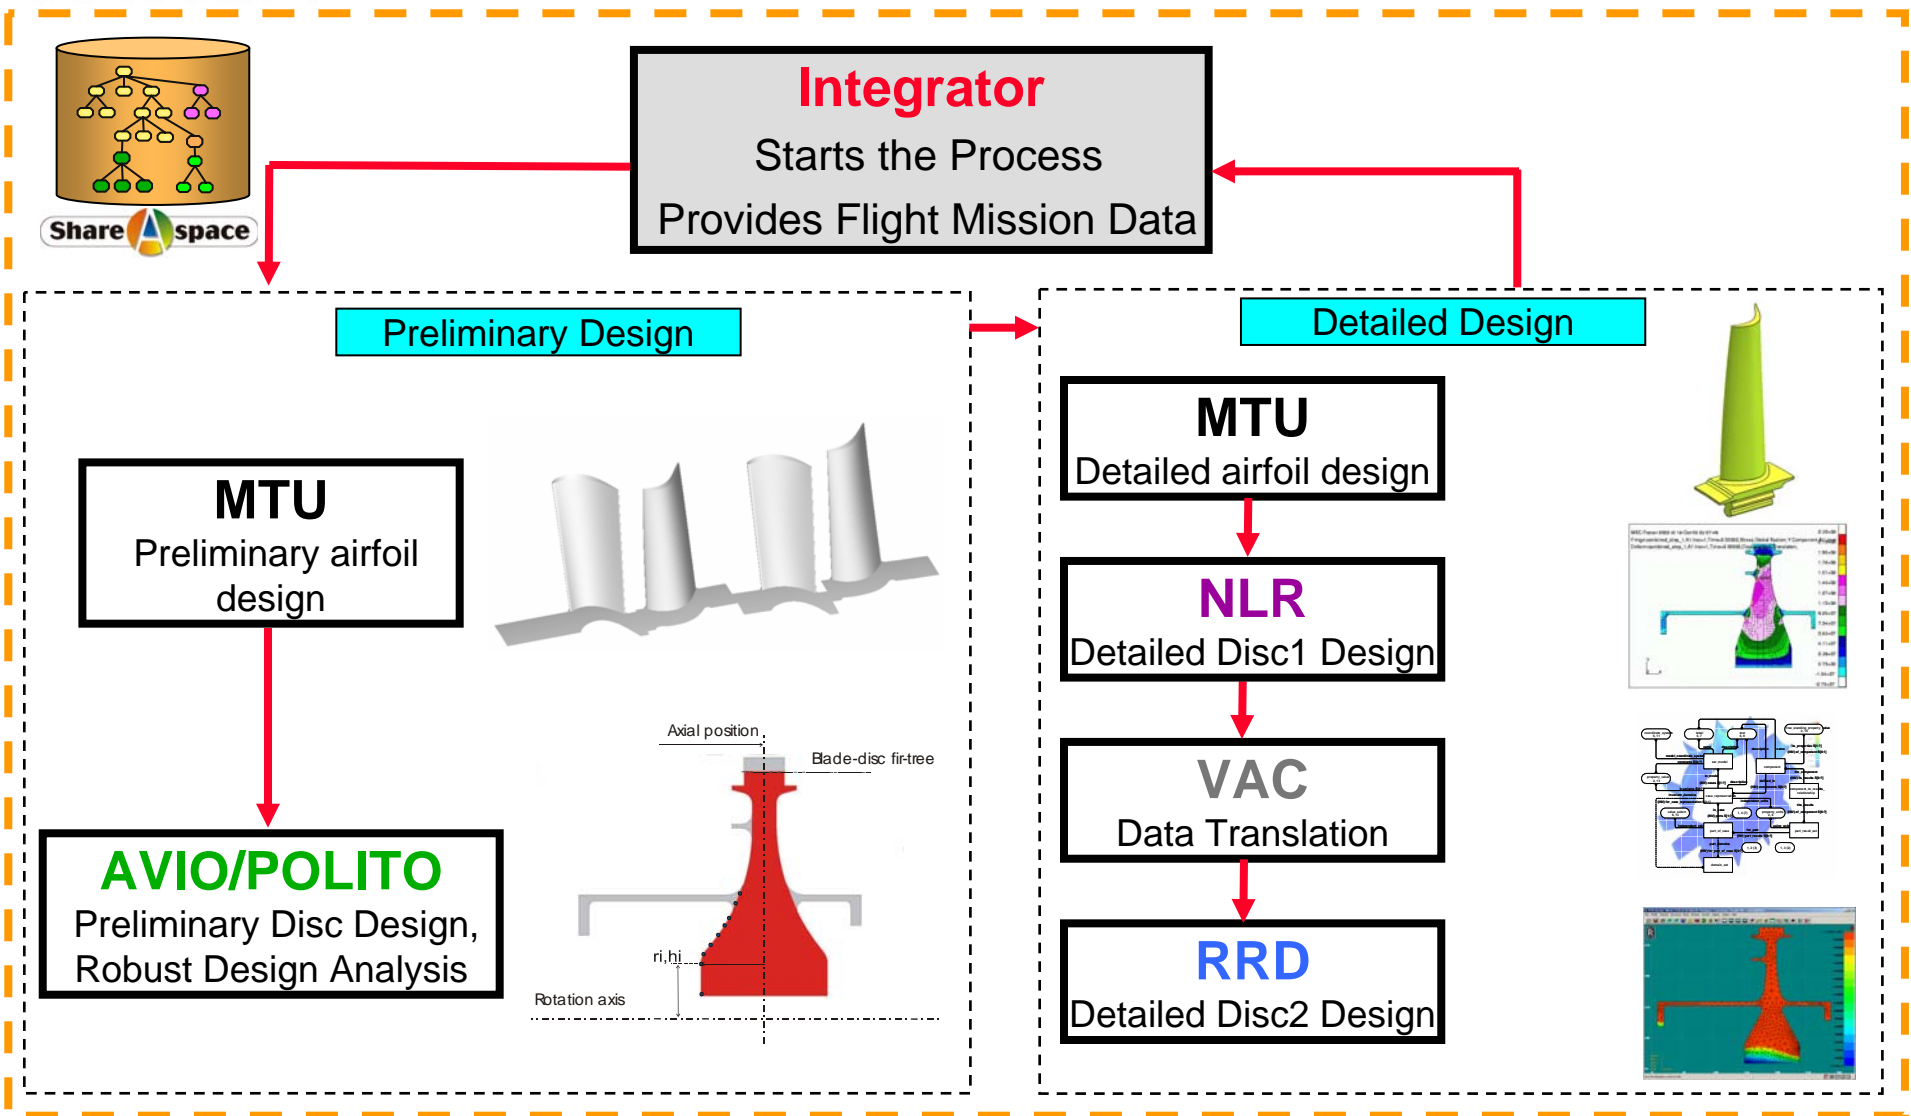

Integrator
ENGINEOUS (RRplc)

Prelim Design Group
AVIO, POLITO, MTU

Detailed Design Group
MTU, NLR, VAC, RRD

Basic Flow and Contents of Demonstration

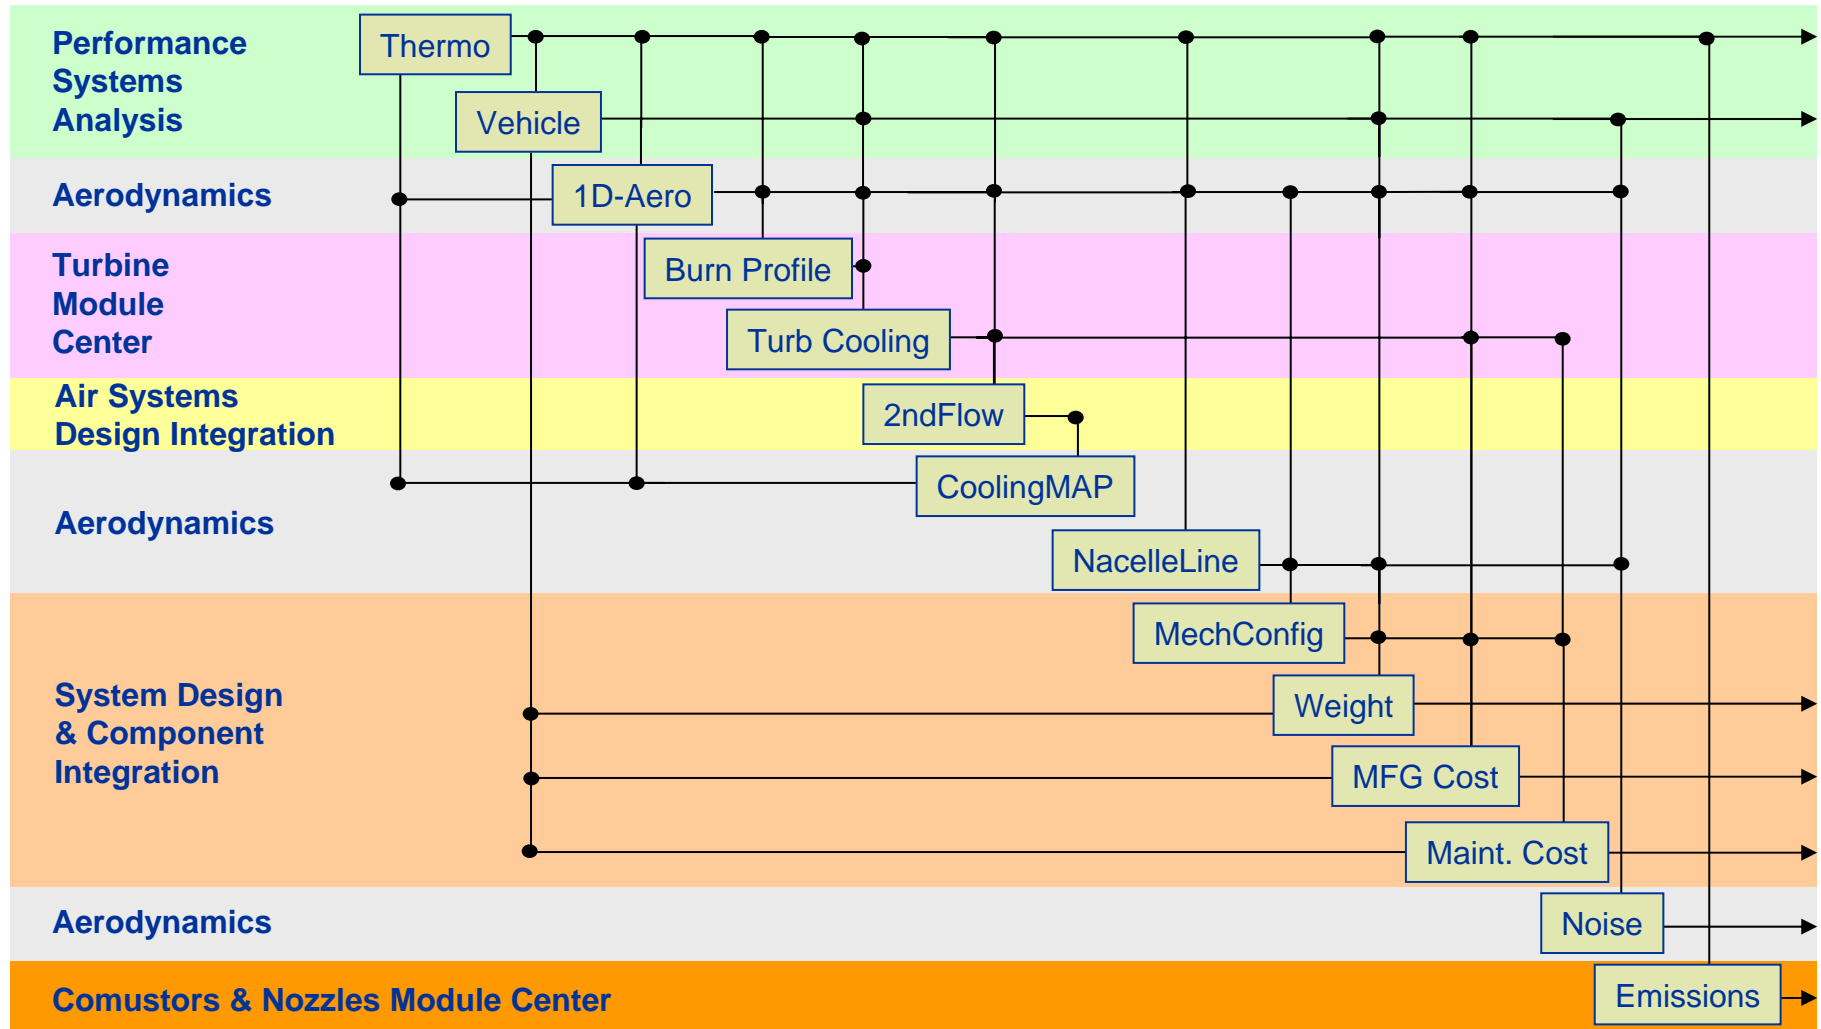

Summary

- **Aerospace industry is moving rapidly towards:**
 - Simulation-based Development Process
 - Workflow-based Standard Work
 - Multi-disciplinary, Multi-Objective, Stochastic
 - Collaborative System Engineering

Systems Optimizations Have Grown To Encompass Major Engineering Functions

6 Organizations, 14 disciplines , 50 Instantiations of models, 1000's of parameters

FIPER Enables Team Collaboration To Setup Models and Review Results
