

# IBM V6R1 and JD Edwards World Software

The V6R1 operating system is now available through IBM. In order to prepare for your JD Edwards World software to continue to function on the V6R1 operating system, you will need to:

- Apply the IBM PTF required to run the ANZOBJCVN command on a machine with either the V5R3 or V5R4 operating system
- Install the JD Edwards World update that contains objects compatible with V6R1 on the same machine as the IBM PTF and then perform testing for critical processes.
- Ensure that your custom programs will function at V6R1 by running the IBM ANZOBJCVN command
- Contact your 3<sup>rd</sup> party software vendors to ensure their product functions with V6R1

## IBM PTFs

Below is the link to the IBM Redbook for V6R1. Refer to Chapter 3 for the required IBM PTF to run the ANZOBJCVN command. There is another chart listing IBM PTFs required if you plan to restore objects created on a V6R1 machine to a machine with an earlier release of the IBM operating system. The ANZOBJCVN command is used in the V6R1 update you will download from the JD Edwards World Customer Connection Update Center.

<http://www.redbooks.ibm.com/redpieces/pdfs/redp4293.pdf>

You should run the ANZOBJCVN command over your custom object library to determine if there are any objects you need to compile. Objects compiled at V5R1 or later can be converted to the V6R1 operating system. It is not necessary to run the ANZOBJCVN over your JDE object library (i.e. JDFOBJ) as that is done in the process for the V6R1 Update you download from the Customer Connection Update Center.

## V6R1 World Update

JD Edwards World V6R1 updates, which deliver objects compatible with the IBM V6R1 operating system are available from the Customer Connection Update Center. Customers must install the appropriate update on a machine that has either the **IBM V5R3 or V5R4** operating system and the previously mentioned IBM PTF using the Installation instructions included with the update.

Release	Apply Software Update
A9.1 Base	V6R1A91
A8.1 Base and above	V6R1A81
A7.3 CU 08 and above	V6R1A73
A7.3 CU 07 and below	Contact Global Customer Support/ World Technical

## World Writer

The latest World Writer updates must be applied *before* applying the V6R1 update. These updates may have previously been applied.

Release	Apply Software Updates
A9.1 Base	No updates needed; included in the release
A8.1 CU 05 and 06	7487421
A8.1 Base through CU 04	6942031, then 7487421
A7.3 CU 15 through 16	7487405
A7.3 CU 08 through 14	6942015, then 7487405
A7.3 CU 07 and below	Contact Global Customer Support / World Technical

Also refer to the attached .pdf file for a PowerPoint with more information regarding the JD Edwards World V6R1 solution.

## Future JD Edwards World Upgrades on V6R1

Once your machine is running the V6R1 operating system, the next upgrade path, regardless of your current A73 or A81 release level, would be to release A9.1.

## JD Edwards World Certification:

Oracle has tested the V6R1 operating system for the following JD Edwards World releases:

- A7.3 CU 8 and above - Single Byte
- A8.1 Base and above -Single Byte
- A9.1 Base - Single Byte
- Web-enablement, Self-service and World Vision
