

# Heading toward a common goal: ERP, eBusiness and efficient company organization.

**abas Business Software is based on a combination of the most modern technology and many years of experience. The advantage for you: a well-proven expertise in the ERP area is reflected in abas Business Software. eBusiness and ERP are seen to work hand in hand! abas Business Software consists of two components: abas ERP is an ERP standard software known for its flexibility. This software solution can optimize your business processes - from purchasing and sales to production, warehouse management and financial accounting. Additionally, you can use the abas eB integrated eBusiness module with the internet.**

## ► Performance range

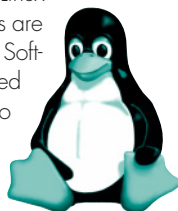

Sales / Sales orders / Shipping • Purchasing / Purchase Orders • Warehouse Management • Scheduling • Logistics • Materials Management / MRP • Production / PPC • Financial Accounting • Fixed Asset Accounting • Cost Accounting • Corridor Controlling • eBusiness • and more ...

## ► Quick introduction periods

abas Business Software can boast a clear structure and clever implementation strategies. Thanks to this, the software can be integrated quickly and smoothly into the existing company structure.

## ► Independent of a platform

Whatever operating system is best suited to your IT environment – abas Business Software runs under Linux, Unix and Windows. ABAS has supported the Open Source operating system Linux since 1995. About 50% of over 1,300 abas-Installations are based on Linux. From Version 2003 of abas Business Software the flexible business standard software will be offered in the Front End range under Linux. Linux proves itself to the server and client through excellent performance, great stability and considerable cost advantages.

## ► Flexible and future-proof

Your specific requirements can be integrated into abas ERP with a minimum amount of time and effort. New functions and technology are always integrated into the software standard. This means abas-Users are always up-to-date.

## ► Controlling for medium-sized companies

abas Corridor Controlling offers a quick overview of company performance figures and supports a consequent and result-oriented company control. It can also be used for the formation of risk management and rating according to Basel II (new Basel Equity Capital Information, Rating).

## ► eBusiness with abas eB

abas eB gives you many Internet uses, e.g E-Shop, order surveillance, SCM, and much more. The ERP Web Interface (EWI) can be used to display ERP data on the web. Data exchange between abas ERP and abas eB couldn't be easier now, and processes can also be triggered in a very straightforward manner.

## ► Efficient company organization and extensive service portfolio

Further focus is on the optimization of business processes and business organization, increase in level of use of an ERP system, and also on an efficient and cost optimal ERP introduction. The efficiency of the ERP system in combination with a target-oriented introduction management, and a system environment organization, results in a high qualitative and quantitative added value for abas customers.

**ABAS - the IT specialist for medium-sized companies**

ABAS offers just that correct balance required by medium-sized companies: This is a complete solution which is flexible enough to adapt to new market demands the moment they arise. More than 1,300 companies in the spheres of production, trade and service have already opted for ABAS.
