III. A Letter from Sir Dudley Cullum, to John Evelin, Esq; concerning the lately invented Stove for preserving Plants in the Green House in Winter, published at the end of the Calendarium Hortense.

SIR.

Cannot but think my felf obliged in Gratitude to give you an Account how well your laiely invented Stove for a Green House succeeds (by the Experience I have had of it) which certainly has more Perfection, than ever yet Art was before Master of. Sir, I have pursued your Directions in laying my Pipes (made of Crucible Earth) not too near the Fire-grate, which is nigh upon, or better than fixteen Inches; and by making a Trench the whole length of my House, under the Paving (for the Air to iffue out and blow the Fire) of a convenient breadth and depth (that is, 18 Inches both ways, cover'd with an Arch of Bricks) and at the other end of the Trench, having a square Iron Plate answerable to that of my Paving (which is 18 Inches) to take off and put on, with a round hole at each corner, of about 3 Inches Diameter, with a Lid to flide open, and shut, upon every end of them, (as you may have seen upon some Porridae-Pot covers) so that by opening any of these holes, or all of them, more or less, or taking off the whole Plate, I can release such a quantity of Air out of the House to blow the Fire so, as to increase or diminish the blasts; and, as you were pleased by Letter to inform me, concerning distributing the Air at its admission more equally through the House, I have inscreed my Pip's into a Channel all along the Wall at the end of the House, with those several Overtures you mentioned: All which, Sir, I affare you, prove most admirably well, as by this free and generous Communication of vours you must have highly obliged all the Loversiof this Recreation, as well Tour most Faithful and SIR25,

Humble Servant,

D. Cullum.
