ONE ADDED.

Two Men to Whom the Cable Gripman Now Concedes the Right of Way.

There has always been one driver that the cable gripman has let have his own way, and that is the driver of the a slight frame and very moderate pow- the verge of starvation, so that many giant truck with the load of iron beams. The power in the engine that moves the cable is ample to brush away the great truck as it would a hand cart. But there would be no adequate means of applying it, and this the cable car does not supply. Heavy as it is, it is not nearly so heavy as the big truck with the iron beams. In a collision with that the car would be wrecked and left behind, while the cable sung merrily on below. The gripman knows this, and so, while he bangs the gong, he doesn't really mean to go on until the driver

of the great truck has turned out. There is now another moving thing that the gripman does not try to brush off the face of the earth, and that is the ponderous road roller, such as is used in the city in the making of asphalt pavements. These rollers go from one part of the city to another under their own steam, lumbering along slowly but with irresistible power. Sometimes they cross the cable tracks or move along in the same street. With a road roller ahead the gripman slams the gong as usual, but it is purely a formal notice. There are now two men to whom the gripman concedes the right of way-the driver of the giant truck with the iron beams and the pilot of the steam road roller.

STORY OF A YALE MAN. A Supposed "Beat" Was the Owner of Great Wealth.

Recently a Yale "beat" was sent to jail, after swindling his classmates in wholesale fashion. He took the whole country for his field of work and visited a prosperous classmate in San Francisco, from whom he extracted \$50. Although well to do, the Californian did not like to waste \$50, and resolved to be stern the next time a Yale man called. His next visitor was a classmate who was known as the "dig" in college, 18 years before. He seemed just as seedy as he used to appear in the classroom, and the (alifornian scented another appeal for money. So he fortified himself, and when asked how the world had used him related a doleful story of bad luck, debt and poverty. He must have drawn the picture pretty strong, for his visitor was deeply moved. Suddenly the seedy classmate turned and said: "Now, don't feel hurt at my offer, but I wish you would take \$10,000 from me to use until you strike better luck. I really don't know what to do with the money, or how to invest all I have, and hall be delighted to let you have it." There was an awkward pause, an outburst and brief explanation. Then both adjourned to the club to talk it over, and the Californian learned how his old classmate had "struck it rich" with a prosperous corporation and was really ready to give away money.

CURIOSITY OF MONKEYS.

One Who Was Inquisitive in Regard to Home-Brewed Ale.

Curiosity seems to be a great failure, or virtue, of monkeys. A story is told of an Englishman who had a South African monkey which had traveled with him around the world. When his bachelor days were over he took his young wife to a lovely old manor house in the south of England, and, Englishmanlike, kept several barrels of good "homebrewed" ale in the cellar. On returning from church one Sunday morning he noticed that the cellar door was open and started on a tour of investigation. As he went down the steps Jenny, the monkey, rushed up, and he found that she had set all the spigots running. The door had been inadvertently left open, and Jenny, doubtless, went prying into the semilighted place. Turning one spigot on produced such a rushing stream that she tried the others also, much to the waste of the liquor. It may be added that when the Englishman's first-born appeared and monopolized attention Jenny got such a fit of jealousy that she was at once sent to the secluded but more congenial society to be found in the monkey house of the London zoological gar-

1

ARREST OF A GIRL TRAMP.

An Elgin Woman, in Male Attire, Beating Her Way on Coal Trains. Nellie Foley, a young woman whose home is in Elgin, Ill., is in the lockip at Youngstown, O. She was caughtry the police for masquerading in male attire. She says her mother lives at Elgin, and she wants to get home. Running out of funds she took to the new woman style and was beating her way on coal trains. She left Parkersburg, W. Va., some five weeks ago. All this time she associated with tramps, and none of them detected her sex. Good women here will get her an outfit of proper clothes, and arrangements will be made to have her taken to her widowed mother. Nellie says her mother does not know where she is or what she

Bogus Electric Belts.

is now doing.

An exchange reports that in an examination that was made of some "electric belts" sold by a street fakir it was found that beneath a strip of gauze was a layer of dry, mustard. When the wearer perspired a little the mustard was moistened and set up a burning sensation, and the deluded victim believed a current of electricity was passing through him.

Dexterity of Cigarette Makers. So great is the dexterity of the employes in cigarette manufactories, ácquired by long continued practice, that some workers make between 2,000 and 3.000 cigarettes daily-and being paid by piecework at so much per 1,000 earn about six dollars weekly.

Things Go by Contractes. In this country of divorces the national bird is the eagle, that chooses its mate for life and never repents its

WORLDLY WISDOM.

Lord Clemmell's Rules Were Very Jack Thinks His Bushel of Buckwheat Severe Onès.

The Power of Perseverance - Sir Henry Cavendish, the youngster, with first sailor, skater, billiard player, fiddler, shorthand writer and master of several other accomplishments of any ton Herald. man in Britain, by taking each in succession, says Lord Clemmell's papers. He rode from Derbyshire to London. 145 miles, from three in the morning of a snowy day to six in the evening, very moderate in eating and drinking, and always far from the fire.

Knowledge of the World-Avoid intimacies. Never be intimate with any man or woman but for the purpose of and never suffer either, upon the same rank with you, to take liberties or to be intimate with you. I never suffer an injury from anybody but an intimate, and every painful moment of my life, every mischief done to me, has arisen from intimacy - treachery, envy, ingratitude, resentment arising from intimacy. Suffer no man to come so near you that you cannot call him "Mr."

with propriety. Discipline of an Attorney-General.-He should arise at four in the morning. He should read without fire, standing, if possible, until eight; he should exercise, bathe and dress at nine; he should see all persons until 11; he should apply every minute to three in court busiport of the day. He should not drink wine at dinner, and eat but a few things, and not much. He should not drink wine after seven, and from eight to twelve he should apply to business.

A CLEVER INDIAN MAIDEN. She Takes Naturally to Up-to-Date

If the Indian braves do not take kindly to civilization, it does not follow that the Indian women don't. Lucy Nicolar is the daughter of the late Joseph Nicolar, of the Penobscot tribe, which has its reservtion on an island, known as Indian island, in the Penobscot river in Maine. Lucy is just coming into her teens, and is a bright miss of marked beauty, and wherever she goes with baskets or Indian exhibits many a young American who looks upon the Indian maiden feels that the land of the Penobscots must be "the land of handsome women." Just now Lucy is receiving private instruction that she may enter high school. Her instructor says that she is bright in her forte. Lucy is perhaps the most proficient piano player on the island, being the owner of an instrument. She also sings pleasingly. But the skill of the member, for she can make baskets, etc., as well as some of the older ones. Lucy is also an accomplished bicycle rider, and has bought a wheel out of her savings. The mother of Lucy, Mrs. Martha Nicolar, is one of the finest-looking members of the tribe, a woman respected by all who know her. She is presi dent of the Wa-ba-na-ki, the only Indian woman club in the country.

DEVOTION OF A PIGEON.

Elwood Bird Works for Days to Relense an Imprisoned Companion.

A remarkable example of a pigeon's devotion was illustrated at Elwood recently. There are many coops of carrier pigeons in that city. Some days ago a pet pigeon disappeared from its accustomed retreat at the storage house of the Indianapolis Brewing company. No trace of it could be found.

A few days later the old pigeon was noticed acting strangely. It began flying viciously against the outside of the building and striking the weather boarding with her bill and head. She would fly to the Panhandle car track and with a flying start dive back against the side of the building, always hitting the same spot. She kept up her queer actions until, it is claimed by those who witnessed the affair, she actually clipped a hole through the siding.

She was later noticed carrying food and dropping it through the small opening. An investigation revealed the fact that the missing bird had got fastened between the weather boarding and the lath. It called on the old bird and at last attracted her attention. She began work getting to it and after three or four days succeeded in making a large enough opening to get food into it.

MOTOR IN HIS NECKTIE

Novel Form of Jewelry Built by an

Electrical Jeweler. A Texas watchmaker and electrician has built for himself a very effective and novel scarf pin in the form of a tiny electric motor, which, though only weighing one penny weight three grains, portant surveys have been accomplished is complete in every detail, and can be operated when supplied with current, made. The McArthur lies on the ways This is probably the smallest operative at the Hay & Wright ship yards at Oakmotor in the world. Gold takes the place of copper throughout, and the field magnets, which necessarily have to be of a magnetic material, consist of two thicknesses of a very fine sheet iron scraped down and polished. These are held together with gold screws, and wound in the regulation manner with very fine silk-covered wire. The commutator bars are also of gold, and the smallest of brushes deliver the current to the armature windings. Notwithstanding its minute size this little motor runs at a lively speed and creates quite a hum when supplied with current from a small silver-chloride battery carried in the vest pocket.

An Island Disappearing. A once inhabited island in the north Atlantic is fast disappearing. Some years ago it was 40 miles long and 21/2 wide, but it has shrunk to 191/4 miles in length and less than one in width.

Highest a Man Can Ascend.

BEARS GO VISITING.

Was a Good Investment. The total failure of the beechnut crop has brought the Maine bears to ers, by mere assiduity made himself the | sly old animals are coming out to the clearings and getting shot while looking for something to eat, says the Bos-Jack Gilpatrick, an aged bear hunter,

who occupies a camp on the side of Chick's hill, in the town of Clifton, gave up the hunt and took in his traps a month ago and went to shooting and poisoning bobcats, because he could find no bears. Late in October he went out for more wildcats, and in passing through a beech wood saw recent traces of a bear that had been scratchanswering your purposes upon them; ing up the falling leaves and eating what few beechnuts of last year's crop he could find. The next day Jack went down to the

store and bought a bushel of a new kind of buckwheat, which had a large kernel. A grain of buckwheat bears the same relation to a beechnut that a snowball does to a satellite; they are shaped alike, but one is infinitely larger than the other. But Jack boiled his buckwheat all night, and when he spread it among the beech trees the next morning a bear that wore magnifying glasses might possibly mistake it for beechnuts. Some hunters came along while Jack was setting his bear traps among the buckwheat and covering them with leaves, and when they ness; to four he should set down the re- saw what he was doing made fun of him and told about him at the post office, so that everybody heard of it and the story got into the newspapers.

Two days later Jack took a big fat bear to Bangor and sold it for \$30. Since then he has caught two smaller bears from the same lot and is looking for more. As the bushel of buckwheat cost but 75 cents Jack thinks it was a good investment.

THE INDEMNITY WAS PAID. Brought About by Moving the Lega-

tion to a Warship. "This controversy between Hayti and Germany over the Lueders case," said an old resident to a Washington Star reporter recently, "brings to my mind the fact that the United States a one time at least during my life showe the same spirit that Germany did in de manding an indemnity at the point of a gun. The incident happened just aft er the close of the war and was about the same kind of affair. The Brazilia government had imprisoned or treated an American citizen in some outrageou way, and the American minister at Ri studies and that mathematics is her Janeiro, acting on his instructions, de manded an indemnity. He was put of from day to day, and finally from wee to week, until he made up his mind tha he was either going to do his duty o tribe is not forgotten by this young lose his position, so he said nothin more about the matter, but waited fo a United States war ship to anchor the harbor. When the vessel arrived h quietly moved his effects from the le gation to the boat and then announce to the powers in Brazil that he had lo cated the United States legation on th deck of a United States war ship, an that unless that indemnity was forth coming in three hours he would shell the town. The indemnity was paid."

ENGLAND'S COAL SUPPLY. Is Nervously Discussing Its Possible Exhaustion.

Once again England nervously is discussing the possible exhaustion of her coal supply, which forms the backbone of her commercial supremacy. Leonard Courtney, as president of the Statistical society, this week more than confirms Prof. Jevons' view that the supply will be in peril within an ordinary lifetime. The output for 1896 actually was 30 per cent. less than it. would have been if the rate of progress in Jevons' time had been maintained. While the British output has increased less than 21/2 times since 1860, the American output has increased tenfold, while the American cost of output has greatly increased. This confirms the Spectator's belief that America soon will occupy a position of unchallenged supremacy in the industrial world. England must adjust herself to a smaller output of coal and iron, and a

readjustment of vocations. "If," adds the Spectator, "English supremacy be destroyed, it will be not through the failure of coal, but through incapacity to keep pace with the electric development in America and Germany."

A NEW MAP OF ALASKA

Important Surveys of the Yukon and Surrounding Country to Be Made.

The United States geodetic survey ship McArthur has been ordered to Alaskan waters and with the opening of spring will head for the Yukon river. there to remain until a series of imand a thorough study of the country land, Cal., receiving repairs, but will soon be in readiness for active service.

Capt. L. Wilhelms, in charge of the ship, under instructions from the navy department at Washington, has secured bids for towing a small stern wheel steamer to the mouth of the Yukon to aid in the surveying work and to serve for the navigation of rivers too shallow for the McArthur.

The McArthur will work up the Alaskan coast, taking observations until the mouth of the Yukon is reached. Then the stern wheeler will be brought into use and the crew and officers will go up the Yukon as far as possible, carefully surveying the country and preparing charts for a new government map of the
