SSOG
SPASTIC SOCIETY OF GURGAON

CENTRE FOR SPECIAL CHILDREN

BACKGROUND OF SSOG

Spastic Society of Gurgaon (briefly known as SSOG hereinafter), was founded in 2008 by some eminent doctors drawn from the super specialty fields of pediatrics, pediatric surgery, neurology, neuro surgery, orthopedics, replacement surgery, physiotherapy, psychology, psychiatry, ophthalmology, dentistry, ayurvedic medicine with support from legal advisors, special educators, and social workers. It is dedicated to the cause of welfare of the spastic children in Haryana with intensive thrust on Gurgaon and the NCR of Delhi. The whole team at SSOG is not only dedicated but is also eager to usher in a transformation in the mindset of the general masses by changing their attitude towards the differently abled children. SSOG is arranging many facilities for such children. These facilities include identifying such children in the District and then reaching out to them by coordinating supply of all medical facilities, wheelchairs, orthotic devices, standers, walkers, braces, necessary vaccinations, medical check-ups etc. as needed from case to case to enable these children lead better and meaningful lives. As our team (consisting mainly of doctors with super specializations in their respective fields), gets flooded, during course of their medical practice in Gurgaon, with such CP children, who are leading life of not only extreme pain and isolation but also that of extreme penury and neglect. Services being rendered by SSOG through two separate delivery channels are

- ? Centre for Special Children (CSC) and
- ? Centre for Physiotherapy for Senior Citizens (CPSS)

The centers were inaugurated by Sh. Rajender Kumar Kataria, Deputy Commissioner, Gurgaon.. Smt. Asha Hooda wife of Honorable Chief Minister of Haryana, Sh. Bhupinder Siongh Hooda also visited the Centers to shower her blessings.

BRINGING WARMTH AND SUNSHINE

It is an occasion of great joy and celebration when a child is born. But in some cases after few months of the birth, the family discovers that the child is not able to hold objects, crawl or walk. A spine chilling news is broken to the parents that the child has an incurable and irreversible condition called 'Cerebral Palsy' and may never be able to hold neck, walk or talk like a normal child next door. A sense of gloom dawns for a few days, at times, it lingers on for many years before the parents get adjusted to the thought of being mother and father of a spastic child. But, then, life is as such. One is to reconcile with the situation and move ahead. On the positive side, in the journey of life, parents are blessed with a new companion who is to be taken care of. In case of cerebral palsy, the parents are to be prepared for long term care of the child. But, one feeling which one is unable to overcome as a parent to a spastic child is that what will happen to the child after death of the mother, the father or the caregiver, towards whom the child was always anxiously looking for, for all his daily care and emotional needs. This thought prompted us to take certain initiatives for short term and long term care of these children.

We request the reader to wait here for a moment and introspect. Whether this city of Gurgaon and NCR, which is overflowing with wealth and opulence, ever thought of such children who depend upon others for all their daily, emotional and future needs? Let us touch another point. Have you ever met a spastic child and interacted with him for a few moments. Do interact with a spastic child today. You may be taken aback. They are intelligent brains at work in visibly deformed bodies. They are, by and large, jovial persons despite the fact that they live with severe multiple disabilities. Spastic Society of Gurgaon aims to address certain questions related to welfare of spastic children of Gurgaon, NCR and Haryana. People from various walks of life have joined hands to make efforts to arrange for long term care of such children; and also to help their parents live life fully, purposefully and contentedly by bringing them closer to each other, by creating coordination between various agencies, social workers, professionals and infra-structure providers. Efforts are also being initiated to make environment of Gurgaon, the millennium city of India, more spastic friendly.
