THE FINEST AFLOAT.

Description of the Hospital Ship of the War Department.

Has Dvery Known Convenience, Ap pliance and Luxury for Care of Sick and Wounded-Two X Ray Outfits.

What undoubtedly is the finest hospital ship in the world steamed out of other hospital ship, belongs to the havy department, and is on duty in Cuban waters.

The Relief, with her splendid lines, ser massive steel frame and her modern engines, more than answers every demand from the view point of a ship proper, and from that of the physician and surgeon she is a dream.

and wounded, into storerooms and cers' quarters; fitted with every apsurgical science, including all known instruments likely to be required in surgical operations; two complete tory, perfect facilities for photographing, and with electrical power everywhere, running the lights and hunthe ship, whose zephyrs will make the wounded soldier forget that he is not in his northern home, instead of off torrid Cuba.

The ship will be loaded with the greatest cargo of nice things that any of patriotic women all over the eastern states have heard of Dr. Torney and his ship, and the result has been contributions of money and luxuries and delicacies, until the pantries and storerooms of the floating hospital now fairly creak with the load of them.

In the way of purely medical stores Dr. Torney has taken pains to supply everything. He last week sent on board several hundred cases of medicinal stores, which he described as "pills and powders." Three special plants have been provided, which will add infinitely to the comfort of the sick. They are the distilling plant, the ice or refrigerating plant and the of the Colonial Dames. The first two will be indispensable in the south in furnishing a plentiful supply of pure and cold water, and the carbonizing plant will make the water more drink-

The wards are models in their way. The walls are painted white, the floors covered with rubber tiling and the beds of iron enameled in white. The beds have fine wire-woven springs and comfortable mattresses, which, being cheap, are thrown away as soon as Boiled.

Bathrooms abound. They are connected with all the wards, with the private quarters of the medical staff and ing expert marksmen, probably suwith those of the ship's officers. There perior to any in the world. is a special shower bath, which would be the making of any bathhouse on land. It is for sick officers, and is so arranged that the shower throws hot or cold, fresh or salt water. All the bathrooms have rubber floors.

For hoisting or lowering the sick or wounded, Naval Constructor Francis T. Bowles has devised a special apparatus. On the forward side of the mainmast he has fitted a steam boom. By its use patients can be taken from a warship and placed on any deck of the Relief or in any ward desired.

AMERICAN PLUCK.

Captain of a Vessel Refuses to Transfor Coal to a Spanish Steamer at Vers Crus.

A second case of an attempt to transfer coal from an American vessel to a Spanish merchantman in Mexico has brought out the old-time pluck of an American sea captain. The 500-ton American schooner Clara A. Phinney. of New Bedford, some days ago was authorized to clear with 700 tons of coal from Mobile to Vera Cruz on affidavits of reliable citizens of Mobile that the coal was destined for railroad purposes. On reaching Vera Cruz Capt. Phinney was directed by L. Jonblanc, his consignee, to place his vessel alongside the Spanish steamer Maria Herrara. In the presence of a group of excited Spanish sympathizers Capt. Phinney bluntly refused, declaring with emphasis that no vessel in his charge should ever lie alongside a ship bearing the flag of his country's enemy, much less supply her with even a pound of coal. The captain, with a crowd at his heels, marched to the American consulate and notified the consul and wrote at once to Gen. Spaulding, acting secretary, that he had placed himself under American protection. Exports of coal to Mr. Jonblanc, of Vera Cruz, will cease, and the department will undertake to fix responsibility and punishment for the

Automatic Lighting System, They have a neat scheme in Torquay, England, in the way of street lighting. On each are lamp post are placed two incandescent lamps, which some into operation automatically if the are lamp circuit goes wrong. Thus the district served by the arcs could not be void of light unless the whole control station goes up in the air.

Sanitarium in British Army and Navy. The conditions under which British mailors and soldiers live are far more sanftary now than in the past. In 1865 more than 11 deaths occurred in every 1,000 men afloat, while ten years later the number fell to 6.8, in 1885 to 5.4, and in 1895 to 4.4. In the army the figares are not quite so satisfactory.

ENCKE'S COMET.

The Long Expected Colestial Wanderer is Finally Located in the Southern Hemisphere.

Encke's comet has arrived at last. Astronomers have been on the watch for it for the past six weeks and more. It was first sighted in the southern hemisphere by Mr. Tebbutt at Sydney, N. S. W., June 11, says the Chicago. Journal.

It is not likely that the comet will be seen at all at this return by astrono- that part of the world whence Tony mers in the northern hemisphere, as New York harbor the other day and its position-near the star Procyonis on her way to Santiago de Cuba. is such that it rises at about seven a. She is the Relief, the pride of the war m. and sets at eight p. m., and theredepartment. The Solace, Uncle Sam's fore is below the horizon for us during the night hours. In the southern hemisphere, where the season is now winter, it may be seen for a short time in the early evening.

This comet is of great interest to asthe short-period comets and as that dow, stuck his head far out and yelled which has the shortest period of any comet known. For the last 80 years it Imagine a ship of this kind divided has been recognized as a member of room, and an instant later the secondup into five large wards for the sick the solar system, circulating round the story window was raining bedding, messrooms, operating-rooms and offi- period of 3 1-3 years, with the regulari- manfully in the attempt to throw pliance known to modern medical and return since its first predicted return and as he worked he quut up the mad

On some of its returns it has been X-ray outfits, a microscopic labora- naked eye, but usually it is a small, Tony loudly proclaiming the belief dreds of fans scattered throughout little ones, are hovering in the sky.

The same telegram from the Lick observatory, which announced the sighting of Encke by Mr. Tebbutt, reported also the discovery of a comet by Mr. Perrine in the Constellation Cameleopardus. It is of the tenth magnisimilar vessel ever carried. Hundreds, tude, and therefore away below the reach of the naked eye.

ALL ARE SHARPSHOOTERS.

American Soldiers Because of Modern Rifles and Long Practice Are Splendid Marksmen.

Sharpshooters have disappeared from the army with the drummer boy, and the men who are generally as signed to the duty of picking off officers during the late civil war are no longer heard of. This is due to the modern formation of the army, and instead of troops fighting in close formation and double ranks of men plant for carbonizing water, the gift massed together they are spread out

The sharpshooters in the late war, of whom so much has been written, were armed with a long rifle range, which gave them a great advantage over the troops in the ranks; but with the advent of a new rifle this has all been changed, and every man in the ranks is now a sharpshooter and carries a shooting iron the range of which is much greater than those used by the old sharpshooters. This government spends twice as much money in gun practice as any other three governments combined, which results in the men in the American navy be-

SUBMARINE BOAT A SUCCESS.

In a Trial Under Water at Milwankee a Speed of Eight Knots an Hour Is Attained.

After lying at the dock for over two months, and having innumerable repairs made, the Raddatz submarine boat was taken out for a trial the other afternoon, and was given a successful test of an hour and a quarter under water. The test was made in the Kinnickinnic river, and because of the narrowness of the stream the boat could not give a complete demonstration of its power. The test, however, was sufficient to prove that the boat caff oper-

ate successfully under water. The boat was only submerged to a depth which did not obscure the two small conning towers. On the top of one of the towers is a camera arrange ment. It shows the images of all bodies on the surface of the water, and would be of great service in locating a boat against which a torpedo might be

Inventor Raddatz claims that the top of the boat was hermetically sealed, and that his air manufacturing machinery worked to perfection. The boat moved through the water at the rate of eight knots an hour.

LOANS ONE MILLION DOLLARS.

Hetty Green Comes to the Financial Aid of the City of Greater New York.

The city of New York borrowed \$1,-000,000 from Mrs. Hetty Green the other day. She gave her check for the amount and was given a receipt in exchange. This is one of the shrewdest financial "deals" Comptroller Coler has put through. The money turned over to the city by the richest woman in America will draw interest at the rate of two per cent. per annum until October 1 next.

This means that for the use of the million dollars for three months the city will pay Mrs. Green about \$5,000. Comptroller Coler says that if he had borrowed the money on Wall street at prevailing rates for city money this accommodation in cash would have cost the city \$7,500. Taxpayers will, therefore, save \$2,500.

Gigantic Mosses.

Mr. Dosen, a German traveler who recently explored the west coast of Patagonia, says that mosses of all species are developed there to an extraordinary degree. They grew in immense heaps, the explorer sinking to his armpits in some of them.

Percentage of Blind People. In every million of people in the world there are 800 who are blind.

A. LIGHTNING BUG.

Buffalonian Sees One and Calls Fire Department

Walle Awaiting Its Arrival He Busies Himself Throwing Crockery and Furniture Out of the Window.

Nature evidently failed to supply Janinski came with lightning bugs, for the other night as Tony was sitting in the gloaming, and also in the parlor of his little home on the second floor of the building at 376 Wilson street, Buffalo, one of the tiny insects flew into the open window and flashed the light from its little lantern. Tony gasped with fright when he saw the sudden gleem and, thinking it was a tronomers as the first discovered of spark of fire, he dashed for the win-"Fire!" at the top of his voice.

Then he made a mad run for his bedsun in a highly eliptical orbit in a furniture and dishes. Tony worked ty of a planet. This is its twenty-third everything he possessed out of doors, call for the fire department. Some of the startled passersby saw the goods bright enough to be seen with the and chattels descending and heard telescopic affair, of little interest to that his premises were affame, and a Change......... the public at large, save as one always call was sent in from the box at the likes to be informed when comets, even neighboring corner, and engine No. 5 started on a fast run for the house.

While turning the corner of William and Krettner streets the engine startled a young man named John Karl, who lives at 905 Clinton street. He was on a bicycle and was perfectly safe, but he thought he was in the path of the approaching engine, and he dashed aside and ran over a small girl who was on the pavement. The collision threw Karl to the pavement, and the hook and ladder truck which accompanied the engine bore down on him. It passed over his wheel and smashed it to bits and one of the horse's hoofs struck young Karl on the left foot, bruising it badly. All this was caused by the poor in-

nocent little lightning bug which flew carelessly away just as the department arrived in front of the house. Karl went to the Fitch hospital, and the little girl went home. Janinski went out in the street collecting furni-

A FOREST OF ICEBERGS.

ture.

Trying Experience and Many Narrow Escapes of the British Steamship Aral,

The British steamship Aral, which has just arrived at New York from Shields siter a voyage of 15 days. picked its way amid a forest of icebergs for 250 miles, and more than a dozen times narrowly escaped being crushed between the grinding, snapping masses that smashed and shattered one another in a battle of frozen giants.

"The wind was blowing strong from the southwest," said one of the Aral's officers, "and the bergs—half a dozen of them-were rising and falling ponderously with the heave of the ocean. Two of them had each a single spire about 75 feet high that glittered like 'Iceberg ahead; stern all or we'll

"The engines were reversed at full speed, and we backed away from one of the biggest masses of ice I ever wish to see at close quarters. It was at least 200 feet high, with precipitous sides, while near the top was an overhanging mass of ice that must have weighed a hundred tons. It was enough, any way, to have sunk the himself. strike. way, to have sunk the biggest vessel

"We were fairly surrounded by icebergs of all shapes and sizes. We were kept dodging them until June 21, and had many close calls."

GOVERNMENT RECEIPTS.

Statement for June Shows That The Amount to \$33,500,000 and for Year \$304,500,000.

The statement of the government receipts and expenditures shows that the receipts during June aggregated about \$33,500,000, and for the present fiscal year about \$304,500,000. The receipts from customs is shown to be about \$14,500,000, a loss as compared with the last June of about \$7,000,000. The collections from internal revenue show an increase approximating \$3,-750,000. For the entire fiscal year the receipts from customs amount to a little less than \$170,000,000, a loss as compared with the last fiscal year, 1897, of about \$26,500,000. The internal revenue receipts amount to about \$170,000,000, a gain of \$23,500,000. Up to this time the actual cash expenditures on account of the war amount to about \$60,000,000.

Sample of Spanish Progresslyeness. It is noted that the Philippines were discovered in 1521 and formally annexed to Spain in 1569, nearly 330 years ago. In those 330 years of Spanish rule but 16 miles of railway has been built in the entire archipelago. That is characteristic of Spain's way of ruling her provinces.

Britain's Rule in Egypt. Under British rule the cotton crop of Egypt has doubled, and now amounts to over 500,000,000 pounds a year. Egypt's cotton crop is one of Great Britain's strongest attractions to the Nile country.

Eve the Tallest Woman The Arabs entertain a belief that Eve was the tallest woman that ever lived.
