

The Proper Way to Install a BeerTender Mini-keg

(Krupps B90 or B95)

DO NOT run the BeerTender tube through the rounded cut-out at the top of the mini-keg – This is for the stand alone spout only and will make it harder to close the lid.

Instead, run the spout-end underneath the handle before tapping. This will allow the extra slack to naturally curve around inside the top of the keg, and not bind with the lid.
