

IS BUILT FOR SPEED.

Torpedo Boat Catcher Bailey is to Be a Marvel.

One of Three of the Swift Fighting Ships Authorized by Congress - To Travel 33 Knots an Hour.

The hull of the new torpedo boat destroyer Bailey, built by Charles L. Seabury & Co., at Morris Heights, on the Harlem river, has been completed, and will be launched as soon as the river is free of ice.

The Bailey and her mates are the first destroyers to be built for the United States navy, and if the expectations of the Bailey's builders are fulfilled she will be capable of a speed of 33 knots an hour.

The Bailey's engines are of the four cylinder, triple expansion type. The development of 5,600-horse power is expected when the engines are making about 400 revolutions a minute.

The Bailey's engines are of the four cylinder, triple expansion type. The development of 5,600-horse power is expected when the engines are making about 400 revolutions a minute.

FAMILY WITHOUT TEETH.

Game Ostrich and Becomes Hard Enough to Crack Nuts - Curious Physiological Freak in Indiana.

James Leonard, a farmer residing east of Noblesville, Ind., on the Madison county line, is 52 years of age and has never had a tooth.

They reared a family of four children, all of whom have inherited their father's strange misfortune. The family is undoubtedly one of the most remarkable in the state.

The children are all of the same age, though he had a full allowance of teeth. The children can do the same thing. All show remarkable development of the muscles of the jaw.

CAPTURED GUNBOATS.

Alvarado and Sandoval Attract Attention at Washington.

Will Be Part in Good Condition and Sent Back to Cuba to Do Coast and Harbor Duty.

The Spanish gunboats Alvarado and Sandoval, the only war vessels captured from Spain by the North Atlantic fleet, and the only ones to reach this country, have attracted thousands of sight-seers to the Washington yard lately.

The Alvarado was surrendered in Santiago harbor at the time of the capitulation of that place, and, although claimed by the navy, was held through great friction with Admiral Sampson until the vessel was delivered to the navy.

While the Alvarado and Sandoval are not adapted for long ocean cruises, especially at this season, they are admirable to perform the duty for which they were designed and built; that is, for guarding the harbors and coasts of Cuba against filibustering expeditions and smugglers.

They were constructed for the Spanish government at Clydebank, England, three years ago, and although they have been on duty in West Indian waters scarcely two years, the Spaniards in charge of them, through stupidity or neglect, have almost ruined them.
