
TITLE = CWX-timeline - years

This system can be useful if you're a programmer, sorting files in an archive, database, logfiles, password making or making serial numbers to a collection of some sort. It makes it possible to get the latest items first, at the top, in a growing collection. I know there is functions in Windows Explorer and such, but this system works in many more device- and computer systems, viewings and in other situations.
