That's correct: http://www.vanheusden.com/aed/ audio-entropyd

There's also one for doing the same with video4linux devices:

Summary:
New incoming convo takes focus

Alpha 5, Win2000
When I'm typing to a buddy (aim) and another buddy sends me the first message of a conversation, the focus is stolen from my text box and placed on the newly created tab. So, my continuing to type is futile.

I think this is new to Alpha 5.
