Complex Multiplication

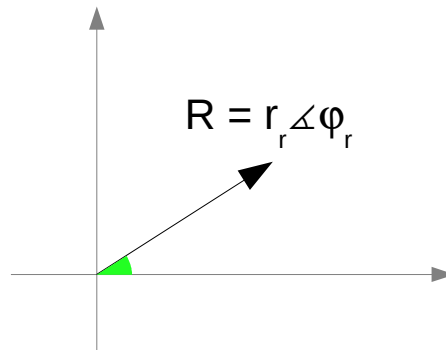

Given Complex Value $C = I_c + j Q_c$

Rotated Complex Value $C' = I_c' + j Q_c'$

Rotation Value $R = I_r + j Q_r$

$$C' = C \cdot R$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (I_r + j Q_r) \\ &= (I_c I_r - Q_c Q_r) + j (Q_c I_r + I_c Q_r) \end{aligned}$$

Adding / Subtracting Phase

To add R' phase to C

$$C' = C \cdot R$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (I_r + j Q_r) \\ &= (I_c I_r - Q_c Q_r) + j (Q_c I_r + I_c Q_r) \end{aligned}$$

To sub R' phase to C

$$C' = C \cdot R^*$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (I_r - j Q_r) \\ &= (I_c I_r + Q_c Q_r) + j (Q_c I_r - I_c Q_r) \end{aligned}$$

Adding / Subtracting 90 Degrees

To add R' phase to C

$$C' = C \cdot R$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (0 + j) \\ &= (-Q_c) + j (I_c) \end{aligned}$$

To sub R' phase to C

$$C' = C \cdot R^*$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (0 - j) \\ &= (Q_c) + j (-I_c) \end{aligned}$$

Adding / Subtracting atan(K)

To add R' phase to C

$$C' = C \cdot R$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (1 + j K) \\ &= (I_c - K Q_c) + j (Q_c + K I_c) \\ &= (I_c - 2^{-L} Q_c) + j (Q_c + 2^{-L} I_c) \end{aligned}$$

To sub R' phase to C

$$C' = C \cdot R^*$$

$$\begin{aligned} I_c' + j Q_c' &= (I_c + j Q_c) \cdot (1 - j K) \\ &= (I_c + K Q_c) + j (Q_c - K I_c) \\ &= (I_c + 2^{-L} Q_c) + j (Q_c - 2^{-L} I_c) \end{aligned}$$

$$K = \frac{1}{2^L}, \quad L = 0, 1, 2, \dots$$

atan(K)

$$\theta_0 = \tan^{-1}(2^0) = 45.00000$$

$$\theta_1 = \tan^{-1}(2^{-1}) = 26.56505$$

$$\theta_2 = \tan^{-1}(2^{-2}) = 14.03624$$

$$\theta_3 = \tan^{-1}(2^{-3}) = 7.12502$$

$$\theta_4 = \tan^{-1}(2^{-4}) = 3.57633$$

$$K = \frac{1}{2^L}, \quad L = 0, 1, 2, \dots$$
