2D FT seismic example (1)

24 receivers each with 25m spacing

Time shift 15 ms/trace

Seismogram total length 1sec

Sampling period 0.001 sec $f_s = 1000 \text{ samples/sec}$

Narrow band signal's frequency 12 Hz

Phase Velocity?

$$15 \text{ ms/trace} * 23 \text{ trace} = 345 \text{ ms} = 0.345 \text{ sec}$$

$$12 \text{ Hz} \rightarrow 12 \text{ cycles / sec} * 0.345 \text{ s} = 4.14 \text{ cycles}$$

$$25\text{m spacing} \rightarrow 25\text{m} * 23 = 575 \text{ m} = 0.575 \text{ km}$$

$$\frac{1}{\lambda} = \frac{4.14 \text{ cycles}}{0.575 \text{ km}} = 7.2 \text{ cycles/km} \quad k = \frac{2\pi}{\lambda}$$

2D FT seismic example (2)

24 receivers each with 25m spacing

Time Shift 15 ms/trace

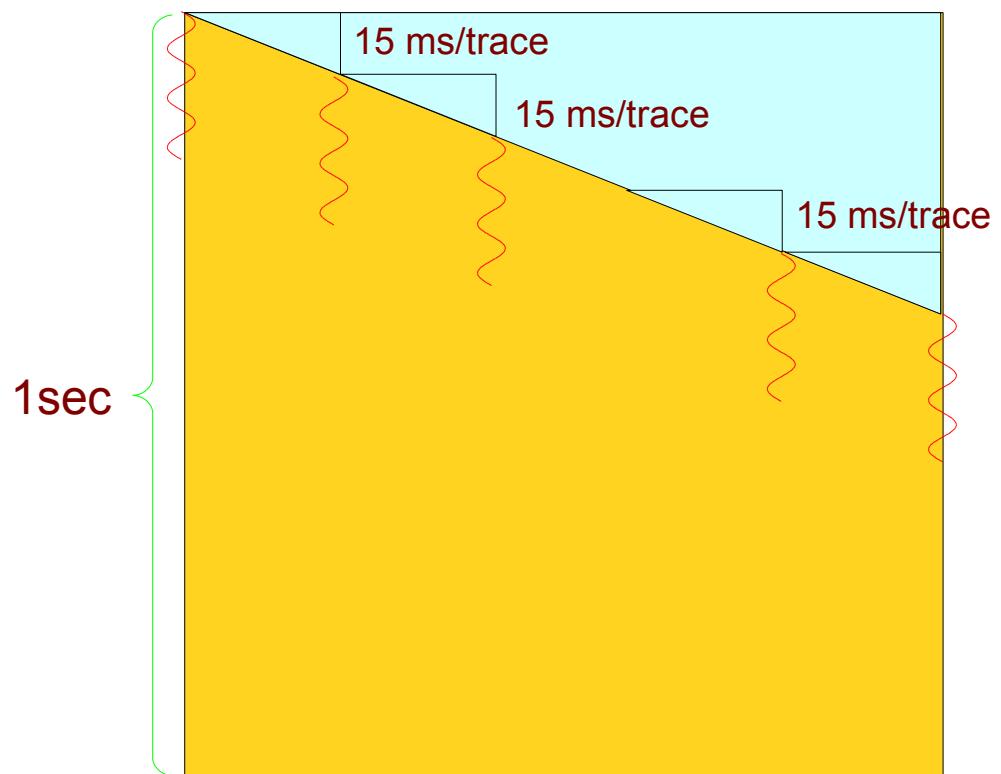

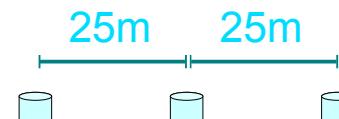

Seismogram Total Length 1sec

Sampling period 0.001 sec

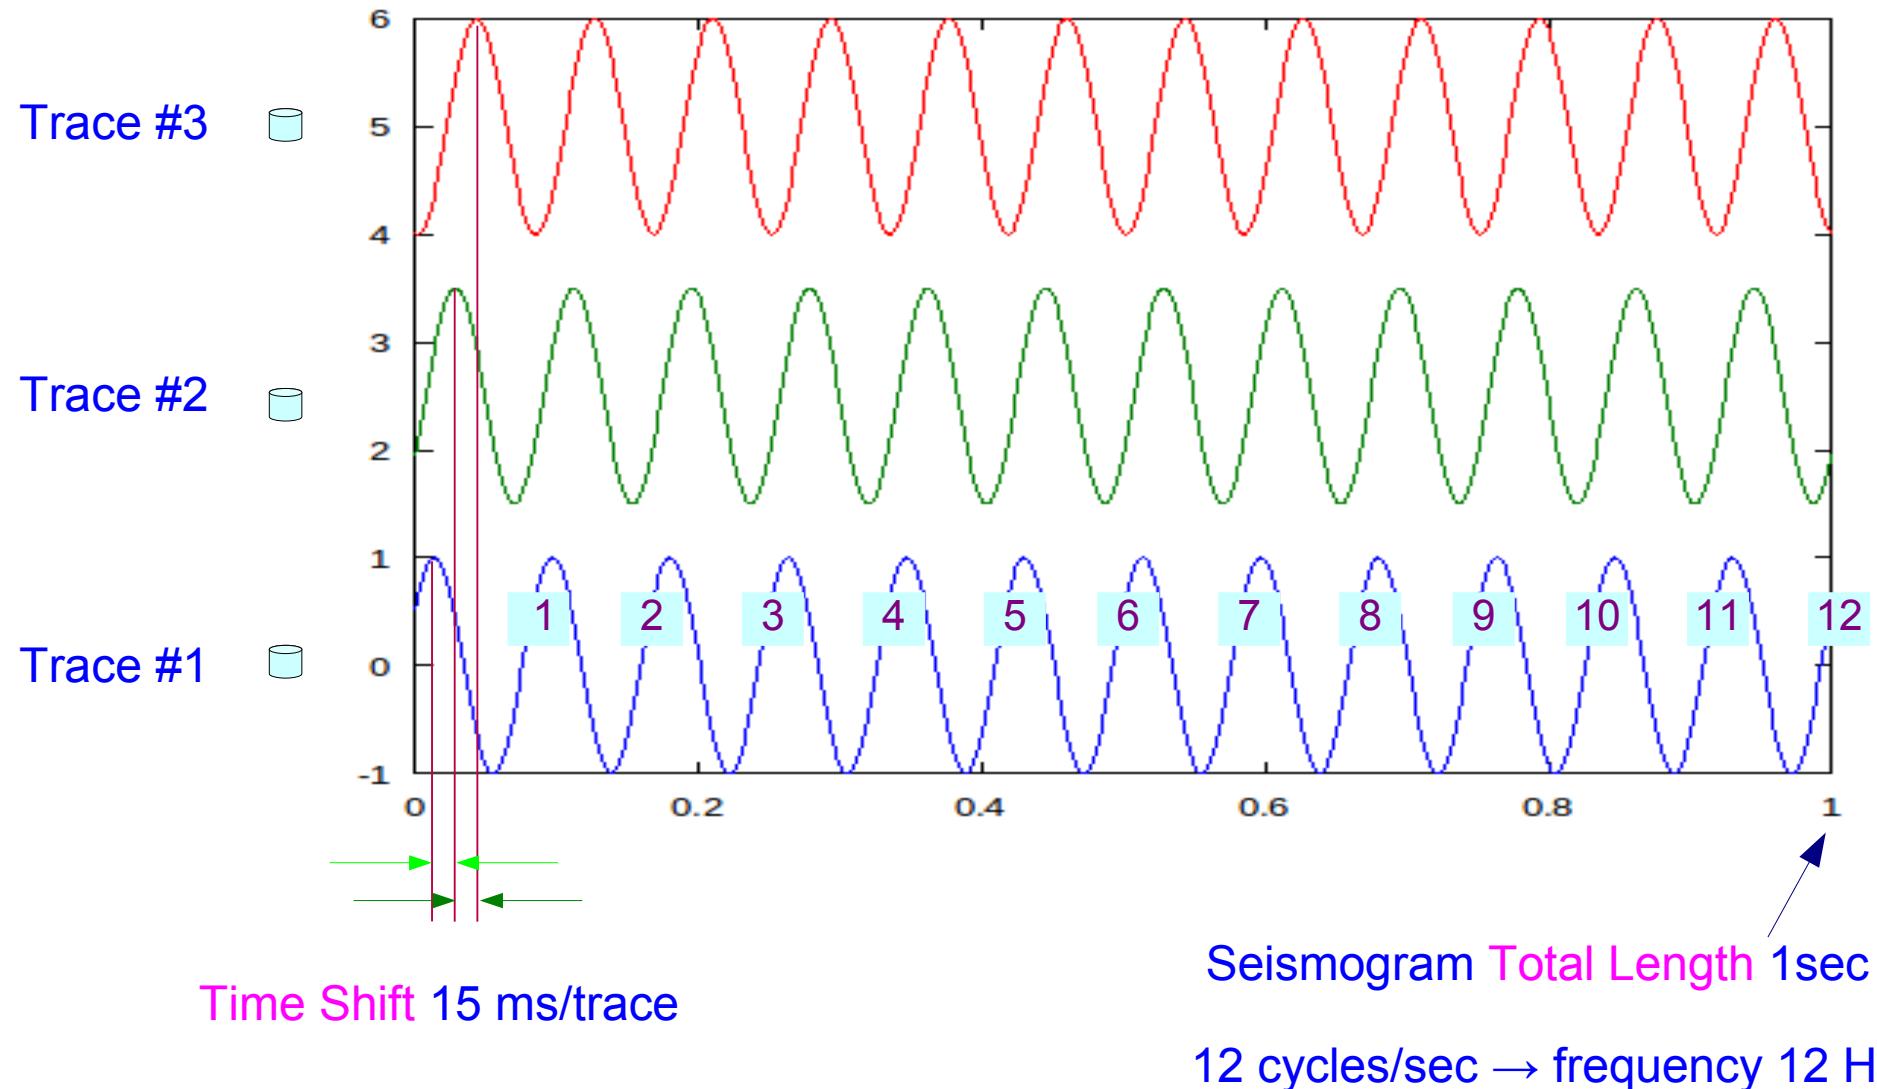

$$f_s = 1000 \text{ samples/sec}$$

Narrow band signal's frequency 12 Hz

24 receivers

2D FT seismic example (3)

2D FT seismic example (4)

Phase Velocity

$$\frac{\Delta x}{\Delta t} = \frac{0.575 \text{ km}}{0.345 \text{ sec}} = 1.67 \text{ km/sec}$$

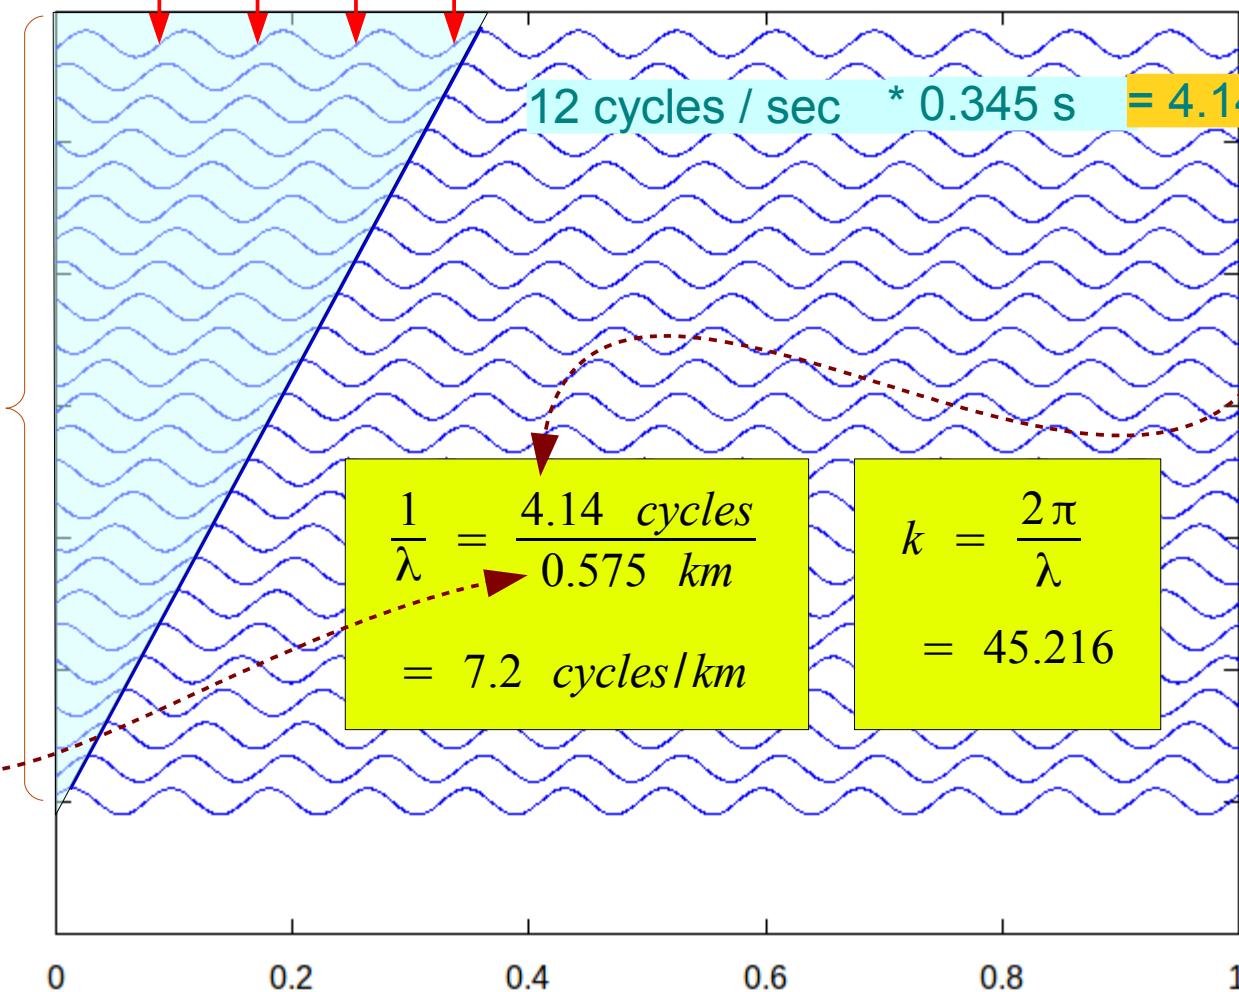

$$25\text{m} * 23 = 575 \text{ m}$$
$$\Delta x = 0.575 \text{ km}$$

$$15 \text{ ms/trace} * 23 \text{ trace} = 345 \text{ ms} = 0.345 \text{ sec} = \Delta t$$

$$12 \text{ cycles / sec} * 0.345 \text{ s} = 4.14 \text{ cycles}$$

$$\frac{1}{\lambda} = \frac{4.14 \text{ cycles}}{0.575 \text{ km}} = 7.2 \text{ cycles/km}$$

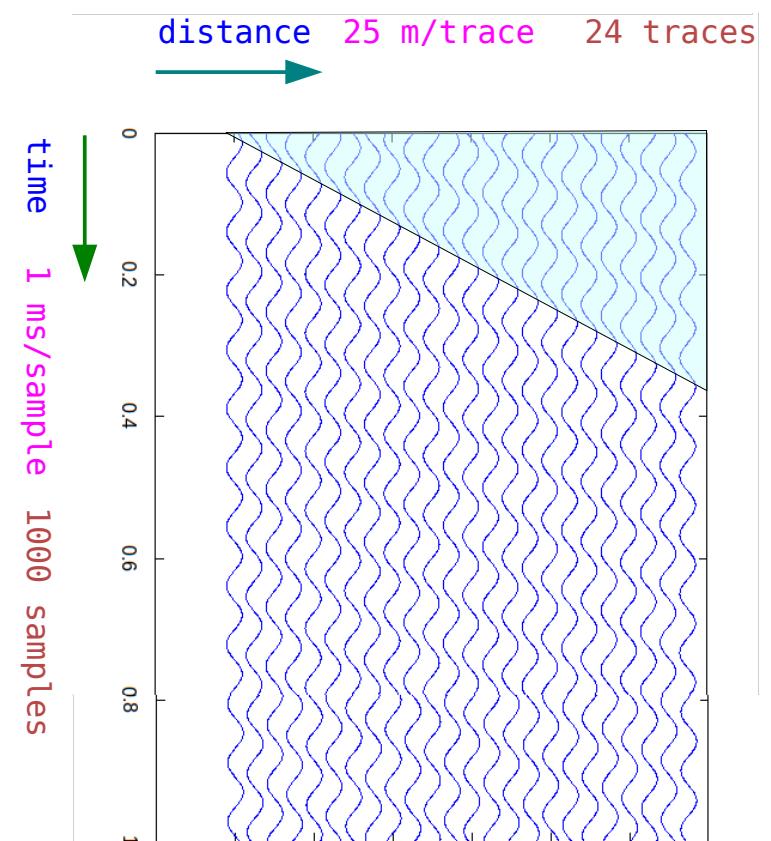

$$k = \frac{2\pi}{\lambda} = 45.216$$

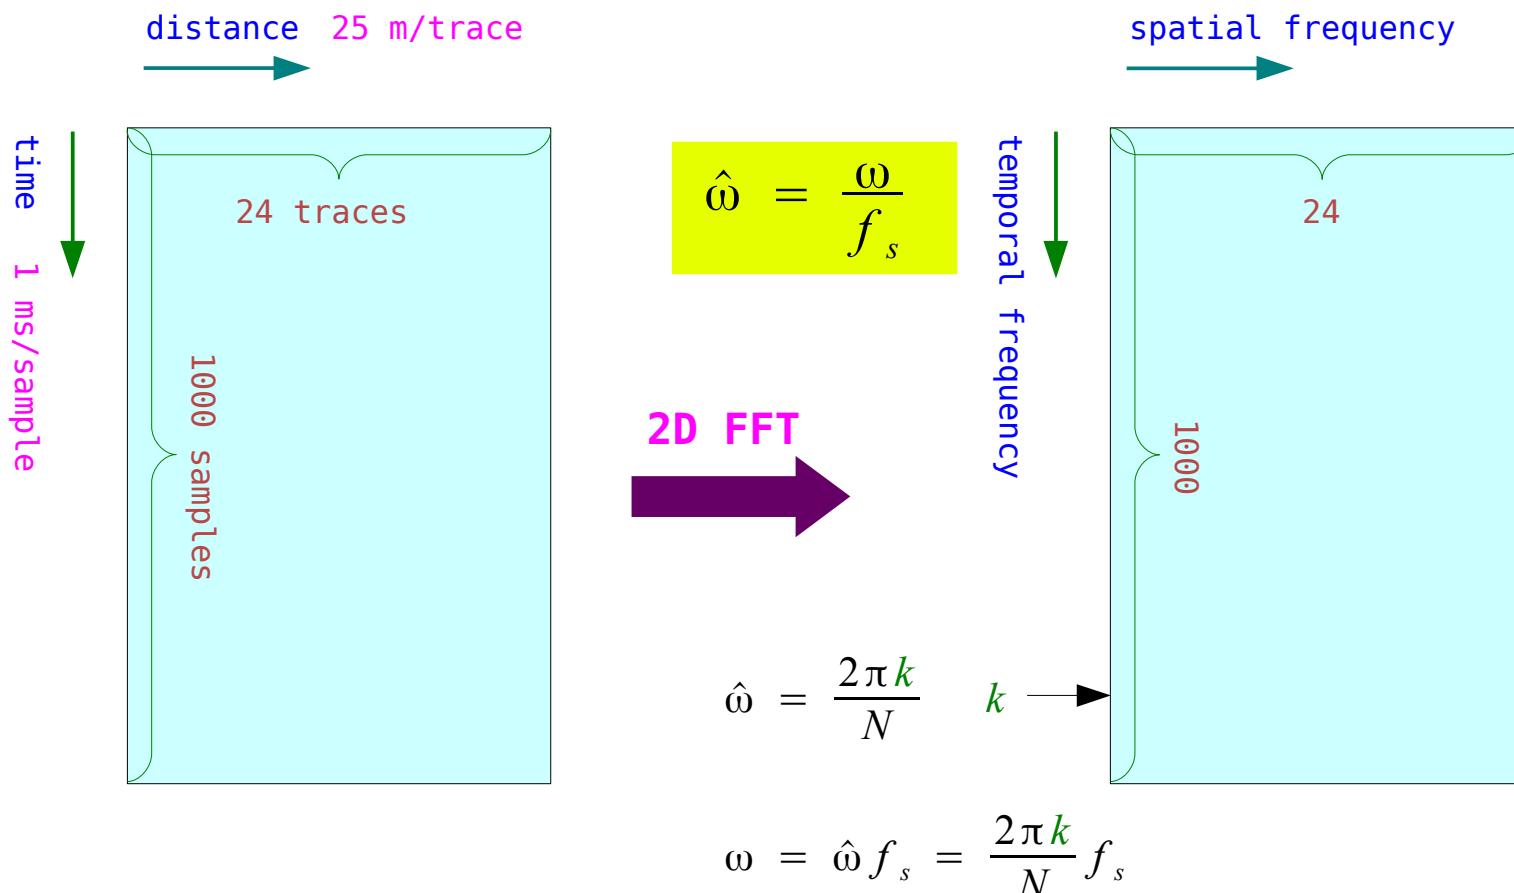

2D FT seismic example (4)

```
w = pi * 2.0 * 12.0; % 2 pi f
delta = 0.001; % T_s
ss = -0.015; % time delay between adjacent traces
Y = [];
time = (0:delta:1.0); % 1 sec period by T_s
m = length(time);
for i=1:24
    s = ss*(i-1);
    x = w*(time - s);
    y = cos(x);
    Y = [Y y'];
end;

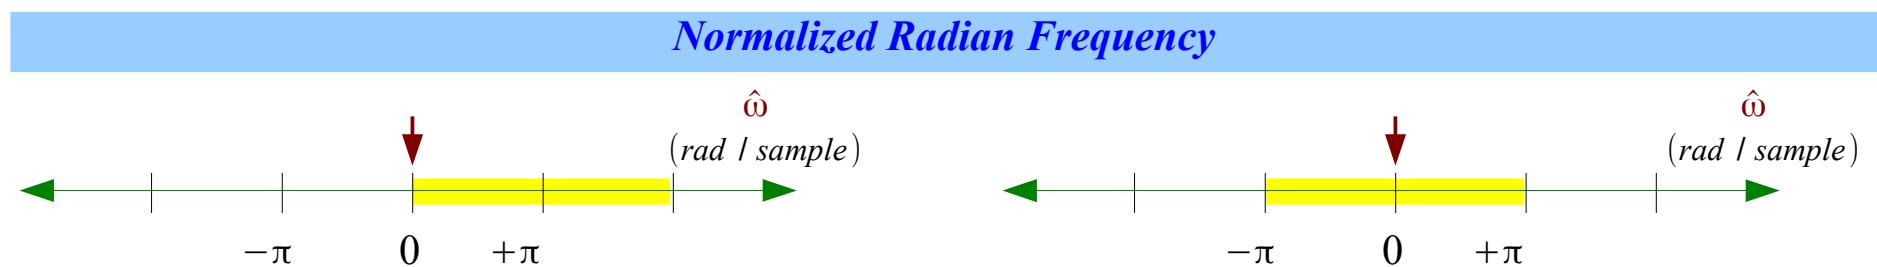

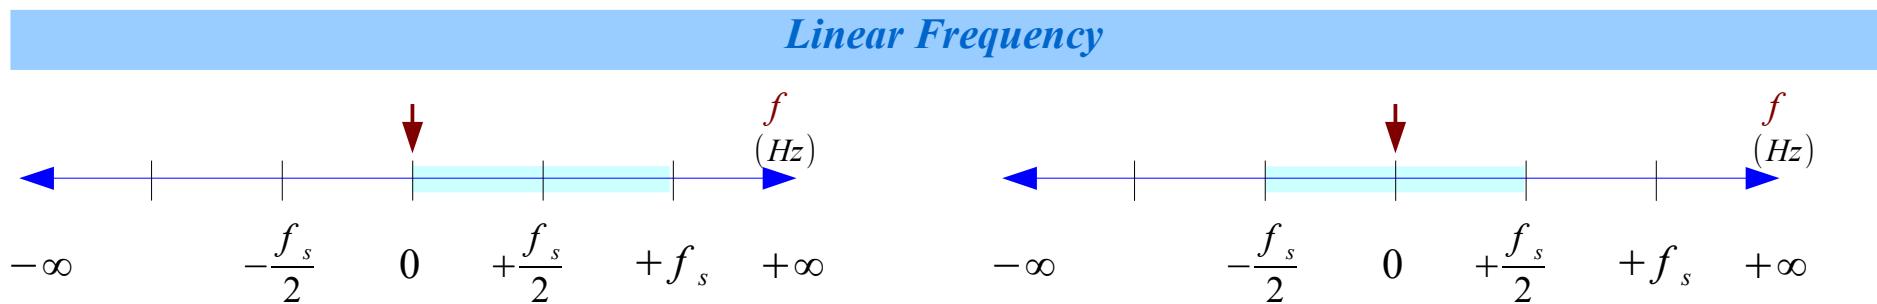

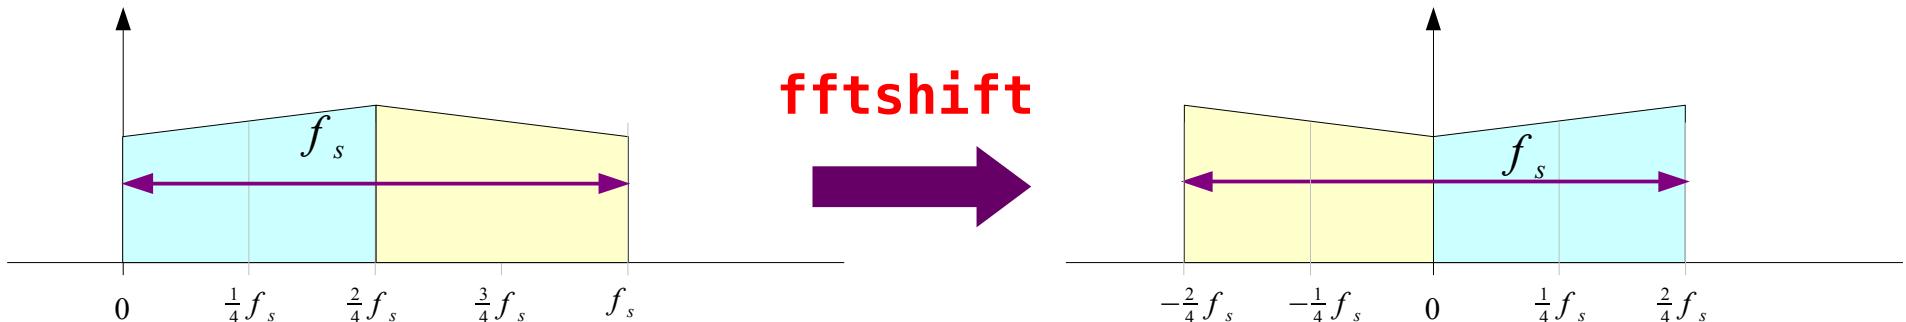

Z=fft2(Y);
mag_Z = abs(Z);
ang_Z = angle(Z);
[r c] = size(Y);
tx = 1:r;
ty = 1:c;
mesh(ty, tx, mag_Z)
```
